Book of Iron Elizabeth Bear, 2013 Subterranean Press is proud to announce *Book of Iron*, the standalone prequel to Elizabeth Bear's acclaimed novella, *Bone and Jewel Creatures*. Bijou the Artificer is a Wizard of Messaline, the City of Jackals. She and her partner and rival Kaulas the Necromancer, along with the martial Prince Salih, comprise the Bey's elite band of trouble-solving adventurers. But Messaline is built on the ruins of a still more ancient City of Jackals. So when two foreign Wizards and a bard from the mysterious western isles cross the desert in pursuit of a sorcerer intent on plundering the deadly artifacts of lost Erem, Bijou and her companions must join their hunt. The quest will take them through strange passages, beneath the killing light of alien suns, with the price of failure the destruction of every land.

Iron Metabolism, Anemias. Diagnosis and Therapy Manfred Wick, Germar-Michael Pinggera, Paul Lehmann, 2013-03-09 Disturbances of iron metabolism, particularly iron deficiency, are among the most commonly overlooked or misinterpreted diseases. This is due to the fact that the determination of transport iron in serum or plasma, which used to be the test in conventional diagnosis, does not allow a representative estimate of the body's total iron reserves. A proper estimate was formerly possible only by the costly and invasive determination of storage iron in the bone marrow, however, sensitive, well-standardized immuno-chemical methods for the precise determination of the iron storage protein ferritin in plasma are now available. Since the secretion of this protein correctly reflects the iron stores in the majority of cases, these methods permit fast and reliable diagnosis, particularly of iron deficiency conditions. The fact that iron deficiency is so common and is usually simple to treat ought to be well known in the medical world. Even non-iron-determined causes of anemia can now be identified rapidly by highly sensitive, well-standardized immuno-chemical methods. This book is intended to contribute to a better understanding of the main pathophysiological foundations and diagnostic principles.

Tales of the Iron Bloomery Bernt Rundberget, 2016-11-01 In *Tales of the Iron Bloomery* Bernt Rundberget argues that the ironmaking of southern Hedmark was an important basis for political developments from chiefdom to Norwegian kingdom in the period AD 700-1300.

Iron and Cobalt Catalysts Wilson D. Shafer, Gary Jacobs, 2020-06-23 Since the turn of the last century when the field of catalysis was born, iron and cobalt have been key players in numerous catalysis processes. These metals, due to their ability to activate CO and CH₄, have a major economic impact worldwide. Several industrial processes and synthetic routes use these metals: biomass-to-liquids (BTL), coal-to-liquids (CTL), natural gas-to-liquids (GTL), water-gas-shift, alcohol synthesis, alcohol steam reforming, polymerization processes, cross-coupling reactions, and photocatalyst activated reactions. A vast number of materials are produced from these processes, including oil, lubricants, waxes, diesel and jet fuels, hydrogen (e.g., fuel cell applications), gasoline, rubbers, plastics, alcohols, pharmaceuticals, agrochemicals, feed-stock chemicals, and other alternative materials. However, given the true complexities of the variables involved in these processes, many key mechanistic issues are still not fully defined or understood. This Special Issue of *Catalysis* will be a collaborative effort to combine current catalysis research on these metals from experimental and theoretical perspectives on both heterogeneous and homogeneous catalysts. We welcome contributions from the catalysis community on catalyst

characterization, kinetics, reaction mechanism, reactor development, theoretical modeling, and surface science.

"Iron, Ornament and Architecture in Victorian Britain " Paul Dobraszczyk,2017-07-05 Vilified by leading architectural modernists and Victorian critics alike, mass-produced architectural ornament in iron has received little sustained study since the 1960s; yet it proliferated in Britain in the half century after the building of the Crystal Palace in 1851 - a time when some architects, engineers, manufacturers, and theorists believed that the fusion of iron and ornament would reconcile art and technology and create a new, modern architectural language. Comprehensively illustrated and richly researched, *Iron, Ornament and Architecture in Victorian Britain* presents the most sustained study to date of the development of mechanised architectural ornament in iron in nineteenth-century architecture, its reception and theorisation by architects, critics and engineers, and the contexts in which it flourished, including industrial buildings, retail and seaside architecture, railway stations, buildings for export and exhibition, and street furniture. Appealing to architects, conservationists, historians and students of nineteenth-century visual culture and the built environment, this book offers new ways of understanding the notion of modernity in Victorian architecture by questioning and re-evaluating both Victorian and modernist understandings of the ideological split between historicism and functionalism, and ornament and structure.

Iron and Steel Ruth Kassinger,2003-01-01 Iron and Steel. Ceramics. Dyes. Glass. Gold. All are important materials that have impacted civilization. In Ruth G. Kassinger's five-book Material World series, she traces the history and science of these important materials and tells how they are being used today. Ancient people of the Near East were the first to discover how to turn iron ore into wrought iron and then to fashion this sturdy metal into tools, weapons, and other implements. Later, blacksmiths learned to make iron into steel. In *Iron and Steel: from Thor's Hammer to the Space Shuttle*, Kassinger covers the history of iron and steel from early times to the present. She also relates some of the myths associated with these materials and explains the science behind their production and use. Book jacket.
