**Forensic Anthropology and Medicine** Aurore Schmitt,2007-11-09 Recent political, religious, ethnic, and racial conflicts, as well as mass disasters, have significantly helped to bring to light the almost unknown discipline of forensic anthropology. This science has become particularly useful to forensic pathologists because it aids in solving various puzzles, such as identifying victims and documenting crimes. On topics such as mass disasters and crimes against humanity, teamwork between forensic pathologists and forensic anthropologists has significantly increased over the few last years. This relationship has also improved the study of routine cases in local medicolegal institutes. When human remains are badly decomposed, partially skeletonized, and/or burned, it is particularly useful for the forensic pathologist to be assisted by a forensic anthropologist. It is not a one-way situation: when the forensic anthropologist deals with skeletonized bodies that have some kind of soft tissue, the advice of a forensic pathologist would be welcome. Forensic anthropology is a subspecialty/field of physical anthropology. Most of the background on skeletal biology was gathered on the basis of skeletal remains from past populations. Physical anthropologists then developed an indisputable "know-how"; nevertheless, one must keep in mind that looking for a missing person or checking an assumed identity is quite a different matter. Pieces of information needed by forensic anthropologists require a higher level of reliability and accuracy than those granted in a general archaeological context. To achieve a positive identification, findings have to match with evidence, particularly when genetic identification is not possible.

**Measures of Association for Cross Classifications** L. A. Goodman,W. H. Kruskal,2012-12-06 In 1954, prior to the era of modern high speed computers, Leo A. Goodman and William H. Kruskal published the first of a series of four landmark papers on measures of association for cross classifications. By describing each of several cross classifications using one or more interpretable measures, they aimed to guide other investigators in the use of sensible data summaries. Because of their clarity of exposition, and their thoughtful statistical approach to such a complex problem, the guidance in this paper is as useful and important today as it was on its publication 25 years ago. In a cross-classification by a single number inevitably summarizing association necessarily loses information. Only by the thoughtful choice of a measure of association can one hope to lose only the less important information and thus arrive at a satisfactory data summary. The series of four papers reprinted here serve as an outstanding guide to the choice of such measures and their use.

**Renewing Local Planning to Face Climate Change in the Tropics** Maurizio Tiepolo,Alessandro Pezzoli,Vieri Tarchiani,2017-07-05 This book is open access under a CC BY 4.0 license. This book aims to inspire decision makers and practitioners to change their approach to climate planning in the tropics through the application of modern

technologies for characterizing local climate and tracking vulnerability and risk, and using decision-making tools. Drawing on 16 case studies conducted mainly in the Caribbean, Central America, Western and Eastern Africa, and South East Asia it is shown how successful integration of traditional and modern knowledge can enhance disaster risk reduction and adaptation to climate change in the tropics. The case studies encompass both rural and urban settings and cover different scales: rural communities, cities, and regions. In addition, the book looks to the future of planning by addressing topics of major importance, including residual risk integration in local development plans, damage insurance and the potential role of climate vulnerability reduction credits. In many regions of the tropics, climate planning is growing but has still very low quality. This book identifies the weaknesses and proposes effective solutions.

*Up The Slot: Marines in the Central Solomons* Charles D. Melson,2019-12-03 This work presents a concise account of the Solomon Islands campaign. The details in this work are well-written and precise, which lets the reader understand this accurate report easily. The Solomon Islands campaign was a major Pacific War campaign of World War II. It began with Japanese landings and the invasion of several areas in the British Solomon Islands during the first six months of 1942. The Japanese occupied these areas and started the construction of various naval and air bases to safeguard the side of the Japanese offensive in New Guinea. This work is considered a part of the World War II Commemorative series. The author, Charles Melson, was the Chief Historian for the US Marine Corps. He also operated as a joint historian with the US Central Command and Special Operations Command. This is a definitive history of the Solomon campaign and an interesting piece of literature for history and marine enthusiasts.

**Space-Age Acronyms** Reta C. Moser,2012-12-06 Acronym agglomeration is an affliction of the age, and there are acronym addicts who, in their weakness, find it impossible to resist them. More than once in recent months my peers have cautioned me about my apparent readiness to use not only acronyms, but abbreviations, foreign isms, codes, and other cryptic symbols rather than common, ordinary American words. Many among us, though, either have not received or have chosen to ignore such advice. As a consequence, what we write and speak is full of mystery and confusion. It is then for the reader and listener and for the writer and speaker that Reta C. Moser has compiled this guide. Its effective application to the art of communication is urged. Such use should help avoid many of the misunderstandings involving terminology which occur daily. Although such misunderstandings are certainly crucial in humanistic and social situations, they are often of immediate import and the trigger to disaster in scientific, technical, and political situations. Some 15,000 acronyms and 25,000 definitions are provided (a 50- and 47 -percent increase over the 1964 edition!), with due credit to Miss Moser's diligence in making the compilation and with the acknowledgment that the acronymical phenomenon is very much with us. This edition, like the first, is certain to be of value to writers, librarians, editors, and others who must identify and deal with acronyms.

*Automation and Human Performance* Raja Parasuraman, Mustapha Mouloua, 2018-01-29 There is perhaps no facet of modern society where the influence of computer automation has not been felt. Flight management systems for pilots, diagnostic and surgical aids for physicians, navigational displays for drivers, and decision-aiding systems for air-traffic controllers, represent only a few of the numerous domains in which powerful new automation technologies have been introduced. The benefits that have been reaped from this technological revolution have been many. At the same time, automation has not always worked as planned by designers, and many problems have arisen--from minor inefficiencies of operation to large-scale, catastrophic accidents. Understanding how humans interact with automation is vital for the successful design of new automated systems that are both safe and efficient. The influence of automation technology on human performance has often been investigated in a fragmentary, isolated manner, with investigators conducting disconnected studies in different domains. There has been little contact between these endeavors, although principles gleaned from one domain may have implications for another. Also, with a few exceptions, the research has tended to be empirical and only theory-driven. In recent years, however, various groups of investigators have begun to examine human performance in automated systems in general and to develop theories of human interaction with automation technology. This book presents the current theories and assesses the impact of automation on different aspects of human performance. Both basic and applied research is presented to highlight the general principles of human-computer interaction in several domains where automation technologies are widely implemented. The major premise is that a broad-based, theory-driven approach will have significant implications for the effective design of both current and future automation technologies. This volume will be of considerable value to researchers in human

**Tulsa Race Riot** Oklahoma Commission to Riot of 1921, 2001-02-28 The Tulsa Race Riot of 1921 was the worst civil disturbance since the Civil War. On May 21, 1921, a group of white Oklahomans attacked the prosperous African American community, called the Greenwood District or the Black Wall Street in Tulsa, OK over the alleged assault of a white woman by a black man. 24 hours later more than 800 people were admitted to local hospitals, 10,000 residents were homeless, and 35 city blocks were reduced to rubble. The monetary cost of the riot was later estimated to be 26 million dollars. This report examines the events leading up to the riot, the riot itself, and

the consideration of reparations for the victims.

**Suicide of a Superpower** Patrick J. Buchanan, 2011-10-18 America is disintegrating. The one Nation under God, indivisible of the Pledge of Allegiance is passing away. In a few decades, that America will be gone forever. In its place will arise a country unrecognizable to our parents. This is the thrust of Pat Buchanan's *Suicide of a Superpower*, his most controversial and thought-provoking book to date. Buchanan traces the disintegration to three historic changes: America's loss of her cradle faith, Christianity; the moral, social, and cultural collapse that have followed from that loss; and the slow death of the people who created and ruled the nation. And as our nation disintegrates, our government is failing in its fundamental duties, unable to defend our borders, balance our budgets, or win our wars. How Americans are killing the country they profess to love, and the fate that awaits us if we do not turn around, is what *Suicide of a Superpower* is all about.

**Forensic Dentistry** Paul G. Stimson, Curtis A. Mertz, 2002-01-01 Identification of unknown individuals and the determination of their age, race, and sex is one of the most important functions of forensic dentistry. Throughout history, this procedure has been used to establish difficult identifications, including Adolph Hitler, Eva Braun, Lee Harvey Oswald, and actor William Holden. Other essential applications of forensic dentistry include mass disaster investigations, evaluating bite marks and bitemark evidence in death investigations, child abuse investigations, and in civil litigation for evaluating oral or temporomandibular injuries related to accidents. This book explains these procedures in a comprehensive way that takes you step-by-step through the world of forensic dental investigations. The areas of forensic dentistry have come a long way in recent years. New and unique discussions offer information that will benefit professionals faced with many of the current aspects of the science. Topics include how to deal with a trial or an aggressive attorney and how to assess buried crime scene evidence (the application of forensic geotaphonomy in forensic archaeology). *Forensic Dentistry* illustrates the proper handling and evaluation of dental evidence. Its broad coverage also includes important information for legal and police science professionals who must properly evaluate and present dental findings. This book covers all standard examination practices of dental evidence, including identification of unknown individuals (age, race, sex). Whether you are a medical examiner or a pathologist who needs to know about the proper handling and evaluation of dental evidence, a legal or police science professional who needs to know how to deal with the proper presentation of dental findings in a court of law, or a dentist who wants to use your training and experience in a unique, interesting, and challenging way, this book is for you!

Human Performance, Situation Awareness, and Automation Dennis A. Vincenzi, Mustapha Mouloua, Peter A.

Hancock,2005-01-06 In 2000, the Conference on Automation joined forces with a partner group on situation awareness (SA). The rising complexity of systems demands that one can be aware of a large range of environmental and task-based stimulation in order to match what is done with what has to be done. Thus, SA and automation-based interaction fall naturally together and this conference is the second embodiment of this union. Moving into the 21st century, further diversification of the applications of automation will continue--for example, the revolution in genetic technology. Given the broad nature of this form of human-machine interaction, it is vital to apply past lessons to map a future for the symbiotic relationship between humans and the artifacts they create. It is as part of this ongoing endeavor that the present volume is offered.

Rewriting History Dick Morris,2009-10-13 Now, for the first time, Fox News political analyst and former Clinton adviser Dick Morris turns his sharp-eyed gaze on Hillary, the longtime First Lady, current New York senator, and bestselling author. For, as he argues, no politician in America today is better aligned to become president in 2008--and none would bring more baggage to the White House--than Mrs. Clinton. In *Rewriting History*, Morris draws on his own long working relationship with the Clintons, as well as his trademark deep research and candid, nonpartisan analysis, to create a rebuttal to Hillary's bestselling autobiography, *Living History*. Morris documents how Hillary hides her true self behind a Hillary brand that is chatty, charming, giggly, and warm--but is far from her true personality. In *Rewriting History*, Morris pierces the mask to get at the truth behind the distortions and omissions of Hillary's memoir. Here we meet the real Hillary, both good and bad: the manager who makes the trains run on time, but also the paranoid who sees all those who disagree with her as personal enemies; the idealist, but also the advice addict easily misled by the guru of the moment. Morris describes Hillary's sense of entitlement, and warns that it may lead deep into financial scandal. And he demonstrates how Hillary dodges criticism by pretending that every attack is directed not just at her, but at every working woman in America. Ultimately, Morris argues, the Hillary Clinton of today is marketing a false front, obscuring both her wants and her assets behind the phony facade of a domestic Everywoman. But as she pursues higher office, she also faces a choice. Will she, like Bobby Kennedy, see the error of her ruthless ways, and embrace the sincere idealism she professes? Or, like Richard Nixon, will she allow the darker angels of her nature to overcome her, jeopardizing herself and the country in the process? As *Rewriting History* suggests, we can only hope that Hillary Clinton's past performance is no guarantee of future results.
