Star Trek Memories William Shatner,Chris Kreski,2009-04-21 A living pop culture legend and one of American film and television's most enduring stars, William Shatner will forever be associated with the role of James T. Kirk, captain of the starship Enterprise. Star Trek Memories is Shatner's classic behind-the-scenes look at the legendary series that continues to put forth movies, books, and series spin-offs decades after the last episode aired. A television phenomenon that suffered from shaky ratings from its first broadcast in 1966 through its entire run, Star Trek nevertheless exploded into a worldwide, billion-dollar industry. Avid Trekkers who were onboard at the launch, as well as fans of the later Trek incarnations, will be delighted with this eye-opening, eminently fascinating captain's log from James Kirk himself.

The Cerebral Code William H. Calvin,1998-03-02 The Cerebral Code is a new understanding of how Darwinian processes could operate in the brain to shape mental images in only seconds, starting with shuffled memories no better than the jumble of our nighttime dreams, but evolving into something of quality, such as a sentence to speak aloud. Jung said that dreaming goes on continuously but you can't see it when you are awake, just as you can't see the stars in the daylight because it is too bright. Calvin's is a theory for what goes on, hidden from view by the glare of waking mental operations, that produces our peculiarly human type of consciousness with its versatile intelligence. As Piaget emphasized in 1929, intelligence is what we use when we don't know what to do, when we have to grope rather than using a standard response. Calvin tackles a mechanism for doing this exploration and improvement offline, as we think before we act or practice the art of good guessing. Surprisingly, the subtitle's mosaics of the mind is not a literary metaphor. For the first time, it is a description of a mechanism of what appears to be an appropriate level of explanation for many mental phenomena, that of hexagonal mosaics of electrical activity that compete for territory in the association cortex of the brain. This two-dimensional mosaic is predicted to grow and dissolve much as the sugar crystals do in the bottom of a supersaturated glass of iced tea. A Bradford Book

Big Data Analysis: New Algorithms for a New Society Nathalie Japkowicz,Jerzy Stefanowski,2015-12-16 This edited volume is devoted to Big Data Analysis from a Machine Learning standpoint as presented by some of the most eminent researchers in this area. It demonstrates that Big Data Analysis opens up new research problems which were either never considered before, or were only considered within a limited range. In addition to providing methodological discussions on the principles of mining Big Data and the difference between traditional statistical data analysis and newer computing frameworks, this book presents recently developed algorithms affecting such areas as business, financial forecasting, human mobility, the Internet of Things, information networks, bioinformatics, medical systems and life science. It explores, through a number of specific examples, how the study of Big Data Analysis has evolved and how it has started and will most likely continue to affect society. While the benefits brought upon by Big Data Analysis are underlined, the book also discusses some of the warnings that have been issued concerning the potential dangers of Big Data Analysis along with its pitfalls and challenges.

The Galactic Whirlpool David Gerrold,1980 Beyond the realm of the Federation, beyond the edge of the galaxy, a lost colony of humans in space drifts inexorably toward the galactic whirlpool. Kirk blazes new star trails to these strange people, isolated for centuries. Unless he can convince them that the Enterprise crew members are not demons, they will be sucked into a churning one-way funnel of doom!

Mining Complex Data Zbigniew W. Ras,Shusaku Tsumoto,Djamel A. Zighed,2008-05-13 This book constitutes the refereed proceedings of the Third International Workshop on Mining Complex Data, MCD 2007, held in Warsaw, Poland, in September 2007, co-located with ECML and PKDD 2007. The 20 revised full papers presented were carefully reviewed and selected; they present original results on knowledge discovery from complex data. In contrast to the typical tabular data, complex data can consist of heterogenous data types, can come from different sources, or live in high dimensional spaces. All these specificities call for new data mining strategies.
