Discrete Wavelet Transforms Juuso T. Olkkonen,2011-04-04 Discrete wavelet transform (DWT) algorithms have become standard tools for discrete-time signal and image processing in several areas in research and industry. As DWT provides both frequency and location information of the analyzed signal, it is constantly used to solve and treat more and more advanced problems. The present book: Discrete Wavelet Transforms: Theory and Applications describes the latest progress in DWT analysis in non-stationary signal processing, multi-scale image enhancement as well as in biomedical and industrial applications. Each book chapter is a separate entity providing examples both the theory and applications. The book comprises of tutorial and advanced material. It is intended to be a reference text for graduate students and researchers to obtain in-depth knowledge in specific applications.

Interpolation and Extrapolation Optimal Designs 2 Giorgio Celant,Michel Broniatowski,2017-05-08 This book considers various extensions of the topics treated in the first volume of this series, in relation to the class of models and the type of criterion for optimality. The regressors are supposed to belong to a generic finite dimensional Haar linear space, which substitutes for the classical polynomial case. The estimation pertains to a general linear form of the coefficients of the model, extending the interpolation and extrapolation framework; the errors in the model may be correlated, and the model may be heteroscedastic. Non-linear models, as well as multivariate ones, are briefly discussed. The book focuses to a large extent on criteria for optimality, and an entire chapter presents algorithms leading to optimal designs in multivariate models. Elfving's theory and the theorem of equivalence are presented extensively. The volume presents an account of the theory of the approximation of real valued functions, which makes it self-consistent.

Doing Double Dutch Elke Brems,Orsolya Réthelyi,Ton van Kalmthout,2017-05-22 The importance of a minor language in the field of world literature Dutch literature is increasingly understood as a network of texts and poetics connected to other languages and literatures through translations and adaptations. In this book, a team of international researchers explores how Dutch literary texts cross linguistic, historical, geophysical, political, religious, and disciplinary borders, and reflects on a wide range of methods for studying these myriad border crossings. As a result, this volume provides insight into the international dissemination of Dutch literature and the position of a smaller, less-translated language within the field of world literature. The title Doing Double Dutch evokes a popular rope-skipping game in which two people turn two long jump ropes in opposite directions while a third person jumps them. A fitting metaphor for how literature circulates internationally: two dynamic spheres, the source culture and the target culture, engage one another in a complex pattern of movement resulting in a new literary work, translation, or adaptation formed somewhere in the middle. Handbook of the Geometry of Banach Spaces William B. Johnson, Joram Lindenstrauss, 2001 The Handbook presents an overview of most aspects of modern Banach space theory and its applications. The up-to-date surveys, authored by leading research workers in the area, are written to be accessible to a wide audience. In addition to presenting the state of the art of Banach space theory, the surveys discuss the relation of the subject with such areas as harmonic analysis, complex analysis, classical convexity, probability theory, operator theory, combinatorics, logic, geometric measure theory, and partial differential equations. The Handbook begins with a chapter on basic concepts in Banach space theory which contains all the background needed for reading any other chapter in the Handbook. Each of the twenty one articles in this volume after the basic concepts chapter is devoted to one specific direction of Banach space theory or its applications. Each article contains a motivated introduction as well as an exposition of the main results, methods, and open problems in its specific direction. Most have an extensive bibliography. Many articles contain new proofs of known results as well as expositions of proofs which are hard to locate in the literature or are only outlined in the original research papers. As well as being valuable to experienced researchers in Banach space theory, the Handbook should be an outstanding source for inspiration and information to graduate students and beginning researchers. The Handbook will be useful for mathematicians who want to get an idea of the various developments in Banach space theory.

Orthogonal Polynomials on the Unit Circle Barry Simon, 2005 This two-part volume gives a comprehensive overview of the theory of probability measures on the unit circle, viewed especially in terms of the orthogonal polynomials defined by those measures. A major theme involves the connections between the Verblunsky coefficients (the coefficients of the recurrence equation for the orthogonal polynomials) and the measures, an analog of the spectral theory of one-dimensional Schrödinger operators. Among the topics discussed along the way are the asymptotics of Toeplitz determinants (Szegő's theorems), limit theorems for the density of the zeros of orthogonal polynomials, matrix representations for multiplication by (CMV matrices), periodic Verblunsky coefficients from the point of view of meromorphic functions on hyperelliptic surfaces, and connections between the theories of orthogonal polynomials on the unit circle and on the real line. The book is suitable for graduate students and researchers interested in analysis.

Making Fascism in Sweden and the Netherlands Nathaniël D. B. Kunkeler,2021-09-09 There was no representative fascist movement during interwar Europe and there is much to be learned from where fascism 'failed', relatively speaking. So Nathaniël D. B. Kunkeler skilfully argues in *Making Fascism in Sweden and the Netherlands*, the first in-depth analysis of Swedish and Dutch fascism in the English language. Focusing on two peripheral – and therefore often overlooked – fascist movements (the Swedish National Socialist Workers' Party and the Dutch National Socialist Movement), this sophisticated study de-centres contemporary fascism studies by showing how smaller movements gained political foothold in liberal, democratic regimes. From charismatic leaders and the rallies they held to propaganda apparatus and mythopoeic props seized by ordinary people, *Making Fascism in Sweden and the Netherlands* analyses the constructs and perceptions of fascism to highlight the variegated nature of the movement in Europe and shine a spotlight on its performative process. Drawing on a wealth of archival material and using a highly innovative methodology, Kunkeler provides a nuanced analysis of European fascism which allows readers to rediscover the experimental character of far-right politics in interwar Europe.

Free Random Variables Dan V. Voiculescu,K. J. Dykema,A. Nica,1992 This book presents the first comprehensive introduction to free probability theory, a highly noncommutative probability theory with independence based on free products instead of tensor products. Basic examples of this kind of theory are provided by convolution operators on free groups and by the asymptotic behavior of large Gaussian random matrices. The probabilistic

approach to free products has led to a recent surge of new results on the von Neumann algebras of free groups. The book is ideally suited as a textbook for an advanced graduate course and could also provide material for a seminar. In addition to researchers and graduate students in mathematics, this book will be of interest to physicists and others who use random matrices.

Reliability and Statistics in Transportation and Communication Igor Kabashkin,Irina Yatskiv,Olegas Prentkovskis,2021-02-06 This book reports on cutting-edge theories and methods for analyzing complex systems, such as transportation and communication networks and discusses multi-disciplinary approaches to dependability problems encountered when dealing with complex systems in practice. The book presents the most noteworthy methods and results discussed at the International Conference on Reliability and Statistics in Transportation and Communication (RelStat), which took place remotely from Riga, Latvia, on October 14 – 17, 2020. It spans a broad spectrum of topics, from mathematical models and design methodologies, to software engineering, data security and financial issues, as well as practical problems in technical systems, such as transportation and telecommunications, and in engineering education.

The International Politics of the Asia-Pacific Michael Yahuda,2019-03-18 This fully revised fourth edition of Michael Yahuda's successful textbook brings the subject up-to-date, introducing students to the international politics of the Asia-Pacific region since 1945. As well as assessing the post-cold War uncertainties that challenged balance and power with the region, the book also examines the first two decades of the new millennium, which includes no let up on the 'war on terror', new political administrations in all the key player-states and increased cooperative security between some nations, polarised by volatile relationships between others. Analyzing politics in terms of global, regional and local trends, this new edition features: Discussion and evaluation of the Trump Presidency and its implications for the Asia-Pacific region Analysis of Japan's more assertive foreign policy Examination of the continued Rise of China under Xi Jinping in terms of politics, security, economic dominance and territorial conflicts in the region Ongoing debates concerning the 'war on terror' and how this shifts, forms and reforms relationships Explanation of how America's war's in the greater Middle East and the financial crash of 2008 undermined the American led international order. This new fourth edition will continue to be a core text for students of Asian politics, international relations and Cold War history.
