King of the Slots Jack Harpster, 2010-05-05 This book offers the first full-length biography of the man often described as one of the most influential and innovative people in the gaming industry over the past 50 years. *King of the Slots: William Si Redd* relates the fascinating, only-in-America success story of one man's improbable rise from the depths of poverty to the heights of international commerce and dazzling wealth. William Silas Si Redd is recognized as one of the most important and influential persons in the gaming industry over the past half century. The company he founded, International Game Technology (IGT), is the world leader in the manufacture of gaming equipment and gaming software features. His video poker is the most popular slot machine since the original debuted in 1899. *King of the Slots* covers the life (1911-2003) and rags-to-riches story of the man who changed the face of the casino gaming industry. Both a business book and a biography, it introduces readers to the nation's leading gaming centers, Apollo-era technology and how it changed gambling, and the race to perfect the first video poker game. It also gives them a chance to meet the characters with whom Redd rubbed shoulders, including Howard Hughes, Mafia capo Raymond Patriarca, Arizona cowboy and pig farmer Jimmie Hughes, gaming legend Bill Harrah, and casino visionary Jay Sarno.

Groundwater Lowering in Construction Pat M.

Cashman,Martin Preene,2020-08-10 Praise for the Second

Edition: This is the book that the dewatering sector really needs – it is reliably based on sound theory and profound understanding of the physical processes, yet is presented in a very accessible and user-friendly manner. It draws on many, many decades of experience, and yet is utterly up to date. . . . It is a one-stop shop for the dewatering practitioner – who can nonetheless rest assured that the theoretical basis of the methods presented is flawless. — Professor Paul L. Younger, FGS, FICE, C.Geol., C.Eng., FEng, University of Glasgow, Scotland, UK The best reference on this topic available . . . and will prove useful to a wide variety of readers ranging from junior construction engineers or dewatering contractors to theoretical hydrogeologists and environmental managers. It is rare that a book is able to bridge the gap between theoretical design guidance and practical application. — S.N. Sterling, University of Waterloo, Canada The extensively updated Groundwater Lowering in Construction: A Practical Guide to Dewatering, 3rd Edition offers practical advice on all phases of groundwater control systems, from planning and design, through installation and maintenance, and ultimately decommissioning. The expertise provided in this book can help you improve working conditions, increase project viability, save time and reduce excavation costs. Designers and managers of construction and engineering projects

are given the tools necessary to effectively control groundwater. The content is divided into three sections – Principles, Design and Construction. The Principles section explains the fundamentals of groundwater flow as it relates to civil engineering excavations. The Design section explores in extensive detail site investigation, permeability assessment methods and groundwater control strategies. Chapters in the Construction section describe dewatering and exclusion techniques, and examine the complete life cycle of a groundwater control scheme, including monitoring, maintenance and decommissioning. This section incorporates eleven case histories from the authors' casebook. The 3rd edition has been greatly revised and updated, and contains more than 200 new illustrations. The new content covers: Permeability of soils and rocks Groundwater problems for excavations in rock Groundwater control for tunnelling projects, such as shafts and cross passages Methods for assessing permeability Decommissioning of dewatering systems Optimisation of groundwater control schemes. The new, expanded content offers valuable direction that can give you a true competitive advantage in the planning and execution of temporary and permanent dewatering works for excavation and tunnelling. Written for practising engineers, geologists and construction managers, as well as postgraduate engineering students, this revamped manual on design and practice presents numerous case studies and extensive references to enhance understanding. Martin Preene is a groundwater consultant, based in the UK. He has more than 30 years' experience working on dewatering and groundwater control projects worldwide. The late Pat Cashman was the leading British exponent of groundwater control for his generation, championing a practical and straightforward approach for more than forty years.

The Art of the Metaobject Protocol Gregor Kiczales,Jim Des

Rivieres, Daniel G. Bobrow, 1991-07-30 The authors introduce this new approach to programming language design, describe its evolution and design principles, and present a formal specification of a metaobject protocol for CLOS. The CLOS metaobject protocol is an elegant, high-performance extension to the CommonLisp Object System. The authors, who developed the metaobject protocol and who were among the group that developed CLOS, introduce this new approach to programming language design, describe its evolution and design principles, and present a formal specification of a metaobject protocol for CLOS. Kiczales, des Rivières, and Bobrow show that the art of metaobject protocol design lies in creating a synthetic combination of object-oriented and reflective techniques that can be applied under existing software engineering considerations to yield a new approach to programming language design that meets a broad set of design criteria. One of the major benefits of including the metaobject protocol in programming languages is that it allows users to adjust the language to better suit their needs. Metaobject protocols also disprove the adage that adding more flexibility to a programming language reduces its performance. In presenting the principles of metaobject protocols, the authors work with actual code for a simplified implementation of CLOS and its metaobject protocol, providing an opportunity for the reader to gain hands-on experience with the design process. They also include a number of exercises that address important concerns and open issues. Gregor Kiczales and Jim des Rivières, are Members of the Research Staff, and Daniel Bobrow is a Research Fellow, in the System Sciences Laboratory at Xerox Palo Alto Research Center.
