The Spoken Language Translator Manny Rayner, 2000-08-28 This book describes the Spoken Language Translator (SLT), one of the first major projects in the area of automatic speech translation.

Speech-to-Speech Translation Yutaka Kidawara, Eiichiro Sumita, Hisashi Kawai, 2019-11-22 This book provides the readers with retrospective and prospective views with detailed explanations of component technologies, speech recognition, language translation and speech synthesis. Speech-to-speech translation system (S2S) enables to break language barriers, i.e., communicate each other between any pair of person on the globe, which is one of extreme dreams of humankind. People, society, and economy connected by S2S will demonstrate explosive growth without exception. In 1986, Japan initiated basic research of S2S, then the idea spread world-wide and were explored deeply by researchers during three decades. Now, we see S2S application on smartphone/tablet around the world. Computational resources such as processors, memories, wireless communication accelerate this computation-intensive systems and accumulation of digital data of speech and language encourage recent approaches based on machine learning. Through field experiments after long research in laboratories, S2S systems are being well-developed and now ready to utilized in daily life. Unique chapter of this book is end-2-end evaluation by comparing system's performance and human competence. The effectiveness of the system would be understood by the score of this evaluation. The book will end with one of the next focus of S2S will be technology of simultaneous interpretation for lecture, broadcast news and so on.

Automatic Speech Translation Akira Kurematsu, Tsuyoshi Morimoto, 2023-03-31 Automatic Speech Translation introduces recent results of Japanese research and development in speech translation and speech recognition. Topics covered include: fundamental concepts of speech recognition; speech pattern representation; phoneme-based HMM phoneme recognition; continuous speech recognition; speaker adaptation; speaker-independent speech recognition; utterance analysis, utterance transfer, utterance generation; contextual processing; speech synthesis and an experimental system of speech translation. This book presents the complicated technological aspects of machine translation and speech recognition, and outlines the future directions of this rapidly developing area of technology.

Automatic Speech Translation Akira Kurematsu, 1996-05-28 Automatic Speech Translation introduces recent results of Japanese research and development in speech translation and speech recognition. This book presents the complicated technological aspects of machine translation and speech recognition, and outlines the future directions of this rapidly developing area of technology.

Subtitling Through Speech Recognition Pablo Romero-Fresco, 2020-09-30 Based on sound research and first-hand experience in the field, *Subtitling through Speech Recognition: Respeaking* is the first book to present a comprehensive overview of the production of subtitles through speech recognition in Europe. Topics covered include the origins of subtitling for the deaf and hard of hearing, the different methods used to provide live subtitles and the training and professional practice of respeaking around the world. The core of the book is devoted to elaborating an in-depth respeaking course, including the skills required before, during and after the respeaking process. The volume also offers detailed analysis of the reception of respeaking, featuring information about viewers' preferences, comprehension and perception of respoken subtitles obtained with eye-tracking technology. Accompanying downloadable resources feature a wealth of video clips and documents designed to illustrate the material in the book and to serve as a basis for the exercises included at the end of each chapter. The working language of the book is English, but the downloadable resources also contain sample material in Dutch, French, Galician, German, Italian and Spanish. *Subtitling through Speech Recognition: Respeaking* is designed for use as a coursebook for classroom practice or as a handbook for self-learning. It will be of interest to undergraduate and postgraduate students as well as freelance and in-house language professionals. It will also find a reading public among broadcasters, cinema, theatre and museum

managers, as well as the deaf and members of deaf associations, who may use the volume to support future campaigns and enhance the quality of the speech-to-text accessibility they provide to their members.

Multilingual Speech Processing Tanja Schultz, Katrin Kirchhoff, 2006-06-12 Tanja Schultz and Katrin Kirchhoff have compiled a comprehensive overview of speech processing from a multilingual perspective. By taking this all-inclusive approach to speech processing, the editors have included theories, algorithms, and techniques that are required to support spoken input and output in a large variety of languages. Multilingual Speech Processing presents a comprehensive introduction to research problems and solutions, both from a theoretical as well as a practical perspective, and highlights technology that incorporates the increasing necessity for multilingual applications in our global community. Current challenges of speech processing and the feasibility of sharing data and system components across different languages guide contributors in their discussions of trends, prognoses and open research issues. This includes automatic speech recognition and speech synthesis, but also speech-to-speech translation, dialog systems, automatic language identification, and handling non-native speech. The book is complemented by an overview of multilingual resources, important research trends, and actual speech processing systems that are being deployed in multilingual human-human and human-machine interfaces. Researchers and developers in industry and academia with different backgrounds but a common interest in multilingual speech processing will find an excellent overview of research problems and solutions detailed from theoretical and practical perspectives. State-of-the-art research with a global perspective by authors from the USA, Asia, Europe, and South Africa The only comprehensive introduction to multilingual speech processing currently available Detailed presentation of technological advances integral to security, financial, cellular and commercial applications

IBM MASTOR SYSTEM: Multilingual Automatic Speech-to-speech Translator ,2006 In this paper, we describe the IBM MASTOR, a speech-to-speech translation system that can translate spontaneous free-form speech in real-time on both laptop and hand-held PDAs. Challenges include speech recognition and machine translation in adverse environments, lack of training data and linguistic resources for under-studied languages, and the need to rapidly develop capabilities for new languages. Another challenge is designing algorithms and building models in a scalable manner to perform well even on memory and CPU deficient hand-held computers. We describe our approaches, experience, and success in building working free-form S2S systems that can handle two language pairs (including a low-resource language).

Automatic Speech Translation ,2023 Automatic Speech Translation introduces recent results of Japanese research and development in speech translation and speech recognition. Introduction to Google Translate Gilad James, PhD, Google Translate is a multilingual translation service provided by Google. It allows users to translate words, phrases, and entire documents between multiple languages. The service was launched in April 2006 and has since been constantly updated to provide more accurate translations. Initially offering translations in only two languages, Google Translate now supports over 100 languages. The translation process works by analyzing the text or document input by the user, breaking it up into smaller segments, and then using statistical algorithms to match these segments with translations from its database. Google Translate has been a helpful tool for people to communicate across different languages, whether it be for business or personal use. However, it must be noted that automated translations often carry a high risk of inaccuracies due to the complexities inherent in language and the nuances of different cultures and contexts. It is always recommended to use translations as a starting point, and then have a native speaker review and refine the language to ensure accuracy.

Interpreters vs Machines Jonathan Downie, 2019-12-09 From tech giants to plucky startups, the world is full of companies boasting that they are on their way to replacing human interpreters, but are they right? Interpreters vs Machines offers a solid introduction to recent theory and

research on human and machine interpreting, and then invites the reader to explore the future of interpreting. With a foreword by Dr Henry Liu, the 13th International Federation of Translators (FIT) President, and written by consultant interpreter and researcher Jonathan Downie, this book offers a unique combination of research and practical insight into the field of interpreting. Written in an innovative, accessible style with humorous touches and real-life case studies, this book is structured around the metaphor of playing and winning a computer game. It takes interpreters of all experience levels on a journey to better understand their own work, learn how computers attempt to interpret and explore possible futures for human interpreters. With five levels and split into 14 chapters, *Interpreters vs Machines* is key reading for all professional interpreters as well as students and researchers of Interpreting and Translation Studies, and those with an interest in machine interpreting.

Automatic Speech Recognition and Translation for Low Resource Languages L. Ashok Kumar, D. Karthika Renuka, Bharathi Raja Chakravarthi, Thomas Mandl, 2024-03-28
AUTOMATIC SPEECH RECOGNITION and TRANSLATION for LOW-RESOURCE LANGUAGES This book is a comprehensive exploration into the cutting-edge research, methodologies, and advancements in addressing the unique challenges associated with ASR and translation for low-resource languages. Automatic Speech Recognition and Translation for Low Resource Languages contains groundbreaking research from experts and researchers sharing innovative solutions that address language challenges in low-resource environments. The book begins by delving into the fundamental concepts of ASR and translation, providing readers with a solid foundation for understanding the subsequent chapters. It then explores the intricacies of low-resource languages, analyzing the factors that contribute to their challenges and the significance of developing tailored solutions to overcome them. The chapters encompass a wide range of topics, ranging from both the theoretical and practical aspects of ASR and translation for low-resource languages. The book discusses data augmentation techniques, transfer learning, and multilingual training approaches that leverage the power of existing linguistic resources to improve accuracy and performance. Additionally, it investigates the possibilities offered by unsupervised and semi-supervised learning, as well as the benefits of active learning and crowdsourcing in enriching the training data. Throughout the book, emphasis is placed on the importance of considering the cultural and linguistic context of low-resource languages, recognizing the unique nuances and intricacies that influence accurate ASR and translation. Furthermore, the book explores the potential impact of these technologies in various domains, such as healthcare, education, and commerce, empowering individuals and communities by breaking down language barriers. Audience The book targets researchers and professionals in the fields of natural language processing, computational linguistics, and speech technology. It will also be of interest to engineers, linguists, and individuals in industries and organizations working on cross-lingual communication, accessibility, and global connectivity.

Is That a Fish in Your Ear? David Bellos, 2011-10-11 A New York Times Notable Book for 2011 One of The Economist's 2011 Books of the Year People speak different languages, and always have. The Ancient Greeks took no notice of anything unless it was said in Greek; the Romans made everyone speak Latin; and in India, people learned their neighbors' languages—as did many ordinary Europeans in times past (Christopher Columbus knew Italian, Portuguese, and Castilian Spanish as well as the classical languages). But today, we all use translation to cope with the diversity of languages. Without translation there would be no world news, not much of a reading list in any subject at college, no repair manuals for cars or planes; we wouldn't even be able to put together flat-pack furniture. *Is That a Fish in Your Ear?* ranges across the whole of human experience, from foreign films to philosophy, to show why translation is at the heart of what we do and who we are. Among many other things, David Bellos asks: What's the difference between translating unprepared natural speech and translating Madame Bovary? How do you translate a joke? What's the difference between a native tongue and a learned one? Can you translate between any pair of languages, or only between some? What really goes on when world leaders speak at the UN? Can machines ever replace human translators, and if not, why? But the biggest question Bellos asks is this:

How do we ever really know that we've understood what anybody else says—in our own language or in another? Surprising, witty, and written with great joie de vivre, this book is all about how we comprehend other people and shows us how, ultimately, translation is another name for the human condition.

Continuous, Speaker-independent, Speech Recognition for a Speech to Viseme Translator Holly Kelleher, 1999

Smart Education and e-Learning 2016 Vladimir L. Uskov, Robert J. Howlett, Lakhmi C. Jain, 2016-06-13 This book contains the contributions presented at the 3rd international KES conference on Smart Education and Smart e-Learning, which took place in Puerto de la Cruz, Tenerife, Spain, June 15-17, 2016. It contains a total of 56 peer-reviewed book chapters that are grouped into several parts: Part 1 - Smart University: Conceptual Modeling, Part 2 - Smart Education: Research and Case Studies, Part 3 - Smart e-Learning, Part 4 - Smart Education: Software and Hardware Systems, and Part 5 - Smart Technology as a Resource to Improve Education and Professional Training. We believe that the book will serve as a useful source of research data and valuable information for faculty, scholars, Ph.D. students, administrators, and practitioners - those who are interested in innovative areas of smart education and smart e-learning.

Digital Review of Asia Pacific 2007/2008 Idrc, 2008-01-07 The biennial Digital Review of Asia Pacific is a comprehensive guide to the state-of-practice and trends in information and communication technologies for development (ICT4D) in Asia Pacific. This third edition (2007-2008) covers 31 countries and economies, including North Korea for the first time. Each country chapter presents key ICT policies, applications and initiatives for national development. In addition, five thematic chapters provide a synthesis of some of the key issues in ICT4D in the region, including mobile and wireless technologies, risk communication, intellectual property regimes and localization. The authors are drawn from government, academe, industry and civil society, providing a broad perspective on the use of ICTs for human development.

Localizing Apps Johann Roturier, 2015-05-08 The software industry has undergone rapid development since the beginning of the twenty-first century. These changes have had a profound impact on translators who, due to the evolving nature of digital content, are under increasing pressure to adapt their ways of working. *Localizing Apps* looks at these challenges by focusing on the localization of software applications, or apps. In each of the five core chapters, Johann Roturier examines: The role of translation and other linguistic activities in adapting software to the needs of different cultures (localization); The procedures required to prepare source content before it gets localized (internationalization); The measures taken by software companies to guarantee the quality and success of a localized app. With practical tasks, suggestions for further reading and concise chapter summaries, *Localizing Apps* takes a comprehensive look at the transformation processes and tools used by the software industry today. This text is essential reading for students, researchers and translators working in the area of translation and creative digital media.

SPEECH! How Language Made Us Human Simon Prentis, 2021-05-30 What makes us human? Why are we the only animals who wear clothes, drive cars, trawl the internet, and fly helicopters on Mars? It's all because we've learnt to talk: yet remarkably, we still don't know how we did it. *SPEECH!* suggests an answer that's been hiding in plain sight - the simple yet radical shift that turned our analog grunts and shrieks into words. But its consequences are far from simple: being able to share ideas through language was an evolutionary tipping point - it allowed us to link up our minds. *SPEECH!* traces our roller-coaster ride with language from hunter-gatherer to urban hipster: the epic tale of the struggle for knowledge against the false gods of culture, religion and identity - as we teeter toward a destination we may still resist, but ultimately cannot escape. About the author: Simon Prentis has spent a lifetime working with other cultures and languages in over fifty countries. A veteran translator and interpreter of Japanese, his clients have ranged from national and academic institutions to cultural icons like Paul McCartney, Stanley Kubrick, Frank Zappa and Yoko Ono. A graduate of Oxford University, and a member of the Institute of Translation and Interpreting since 1990, he has worked extensively with

the broadcast media, given expert testimony in high-profile intellectual property disputes, translated four books and reams of technical documents, and presented papers on translation and interpreting at international conferences. This is his first book. Crisp and clear - I agree with your hypothesis. Desmond Morris Bravo! A compelling read. Yoko Ono If you liked Sapiens, you're going to love this. - Jee Mandayo
