Roman Theatres Frank Sear,2006-07-20 This book is a definitive architectural study of Roman theatre architecture. In nine chapters it brings together a massive amount of archaeological, literary, and epigraphic information under one cover. It also contains a full catalogue of all known Roman theatres, including a number of odea (concert halls) and bouleuteria (council chambers) which are relevant to the architectural discussion, about 1,000 entries in all. Inscriptional or literary evidence relating to each theatre is listed and there is an up-to-date bibliography for each building. Most importantly the book contains plans of over 500 theatres or buildings of theatrical type, as well as numerous text figures and nearly 200 figures and plates.

Electrets In Engineering Vladimir N. Kestelman,Leonid S. Pinchuk,Victor A. Goldade,2000-08-31 Recently a new sphere in materials science has formed which subject is structure and properties of electret materials used in engineering, medicine, biotechnology and other branches. It is characterized by specific methods of experimental investigations based on recording charge transfer, polarization and depolarization of dielectrics and involves original techniques and physico-mathematical aids where notions that exist at the interface of several natural and technical sciences are concentrated. It embraces a vast area of applications mainly in engineering, instrument making, electronics, medical technique, biotechnology, and etc., has a specialized technological base for electric polarization of dielectrics composed of uncommon technological methods, equipment and instrumentation. Apparently, future fundamental investigations in the domain of electret materials science are to be developed at the interface of computer of dielectrics. Elaboration of a simulation, physics and physical chemistry model for electric polarization of solid media with uneven charge density distribution, complicated by surface phenomena, outer electromagnetic, heat, chemical and other effects, presents a grave methodological problem. The simulation of structures in which polarization follows diffusion mechanism of chemically active molecules or their fragments, and the development of calculation methods for polarized charge relaxation and regularities of dielectric nonlinear properties, are the most urgent objectives of current research. Success in bioelectret effect studies is anticipated to result in profound widening of natural science knowledge.

Neo-Latin Drama in Early Modern Europe Jan Bloemendal,Howard Norland,2013-09-19 Neo-Latin drama and theatre is a genre that was most often practised in early modern Europe. Introduction to Old English Richard Hogg,2012-01-17 A student's introduction to the first centuries in the history of the English language. The first edition of 'An Introduction to Old English' was written by

Richard Hogg. The second edition has been revised by Rhona Alcorn. Combining a wide variety of short texts with a coherent and up-to-date assessment of the forms of language which remain as the foundation of English today, this introduction offers a unique study of Old English in context. It is designed for students unfamiliar with the earliest stages of the English language and provides a basis for further study of the history of the language to the present day. All the basic elements of Old English are covered, including nouns, adjectives, verbs, syntax, word order, vocabulary and sound values. Wherever possible comparisons are drawn between Old English and the present-day language, but also with other related languages such as Dutch, German and French. There are also chapters introducing Old English poetry and dialect variation, as well as a chapter looking at what happened to the language after the Norman Conquest.

Instruments and Experiences R. V. Jones, 1988-06 A wide-ranging collection of essays tracing the evolution of measurement instrumentation design and performance over the past fifty years. Written by one of the foremost authorities in optical devices, these papers stress the importance of mechanical detail in the development of devices capable of sensitive detection and precise measurement, including lasers and microcircuitry. Topics discussed include optical levers, elastic movements, microbarographs, capacitance micrometers, and radiation pressure and ``aether drag,' all with introductory commentaries describing the author's approach to these problems. Also discuss the roles various instruments have played in the advancement of learning, the history and philosophy of instrument design, and current trends in the field.

The Position of the German Language in the World Ulrich Ammon, 2019-08-08 The Position of the German Language in the World focuses on the global position of German and the factors which work towards sustaining its use and utility for international communication. From the perspective of the global language constellation, the detailed data analysis of this substantial research project depicts German as an example of a second-rank language. The book also provides a model for analysis and description of international languages other than English. It offers a framework for strengthening the position of languages such as Arabic, Chinese, French, Portuguese, Spanish and others and for countering exaggerated claims about the global monopoly position of English. This comprehensive handbook of the state of the German language in the world was originally published in 2015 by Walter de Gruyter in German and has been critically acclaimed. Suitable for scholars and researchers of the German language, the handbook shows in detail how intricately and thoroughly German and other second-rank languages are tied up with a great number of societies and how these statistics support or weaken the languages' functions and maintenance.

Imagine This Julia Baird, 2011-03-31 Until now, the true story of John Lennon's childhood has never been told. John's sister Julia has herself been on a personal journey that has made it possible only now to reveal the full extent of the pain and difficulties – as well as the happier times – living inside John Lennon's family brought. Julia reveals the various strong, self-willed and selfish women who surrounded John as he grew up. John was removed from his mother at the age of 5 to live with his Aunt Mimi, and here Julia shows for the first time the cruelty of this decision – to both mother and son, she sheds a new light on his upbringing with Mimi which is often at dramatic odds with the accepted tale. John's frequent visits to his mother and sisters gave him the liveliness, freedom and love he sought and allowed him to develop his musical talents. The tragic death of their mother, knocked down outside Aunt Mimi's house by a speeding car when John was 17, meant that life for him and his

sisters would never be the same again. Poignant, raw and beautifully written, IMAGINE THIS casts John Lennon's life in a new light and reveals the source of his emotional fragility and musical genius. It is also one family's extraordinary story of how it dealt with fame and tragedy beyond all imagining.

Masterpieces of Italian Violin Making (1620-1850) David Rattray, 2000-12-13 This book presents a unique view of the work of the great Italian violin-makers from the 17th to the 19th centuries, based on the collection of The Royal Academy of Music in London. The Academy, founded in 1822, is Britain's senior conservatory and one of the oldest institutions in the world for advanced musical training. Included here are masterpieces by Amati, Cappa, Celoniato, Ceruti, Dalla Costa, Deconet, Gagliano, Grancino, Guadagnini, Guarneri, Landolfi, Pressenda, Rota, Rugeri, Seraphin, Sorsana, Stradivari, Tecchler, and Testore. This revised edition has an updated descriptive text, features 15 extra entries, devotes at least two full-color spreads to each instrument, and is supplemented with a new dendrochronological study. Specially-commissioned photographs display each violin, viola, or cello with large, high-quality illustrations, revealing details of these instruments as never before. The Academy's collection of stringed instruments consists of around 100 violins and a similar combined number of violas and celli, the majority of which were received as gifts over the last century, beginning with the Rutson Bequest in 1906. These working instruments are maintained in fine playing condition and generally are in the hands of young musicians during their time as students or at the outset of their careers. The fine selection presented here underlines the collection's core of masterpiece Italian violins, and for the most part this book includes only those instruments in the purest state of conservation.

The Violin: Its Famous Makers and Their Imitators George Hart, 1875

Swimming and Flying in Nature Theodore Wu, 2013-04-17 The Symposium on Swimming and Flying in Nature which was held at the California Institute of Technology, Pasadena, California from July 8-12, 1974 was conceived with the objective of providing an interdisciplinary forum for the discussion of fundamental biological and fluid mechanical aspects of these forms of natural locomotion. It was the earnest hope of all concerned in the organization of the Symposium that the exchange of knowledge and interaction of ideas from the disciplines involved would stimulate new research in this developing field. If the liveliness of the discussion generated among the 250 or so participants is any measure, then this objective was fulfilled to a significant degree. These two companion volumes contain the manuscripts of the papers presented during the Symposium. It is hoped that this permanent record will serve to perpetuate the enthusiasm and active thought generated during those days in Pasadena. The first volume contains the proceedings of the first two days of the conference (Sessions I to IV) which concentrated on the locomotion of micro-organisms. The second volume (Sessions V to VIII) deals with the propulsion of larger fish, insects and birds. Professor Sir James Lighthill's Special Invited Lecture which opened the Symposium is contained in the second volume, rather than the first, since it deals with natural flight.

The Polis in the Hellenistic World Henning Börm, Nino Luraghi, 2018 After having been for decades the province of a relatively small group of scholars, the Hellenistic polis has become central to the research agenda of Ancient historians more broadly. This development can be traced from the early nineties of the last century, and has picked up pace in a sustained fashion at the turn of the millennium. Recent research has started approaching the

Greek polis of the centuries between Alexander and Cleopatra as a specific historical phenomenon, striving to define its most peculiar aspects from as many angles as possible, and to point to new avenues of interpretation that might contribute to recognizing its historical role. 0In this general framework, this volume attempts to explore new lines of thought, to question established ways of reading the evidence, and to take stock of recent developments. The contributors do not subscribe to any particular shared approach; on the contrary, their approaches and questions stem from many different scholarly traditions and methodologies. Rather than seeking to achieve a complete coverage, the volume provides a selection of current research agendas, in many cases offering glimpses of ongoing projects.
