Emergent Public Health Issues in the US-Mexico Border Region Cecilia Ballesteros Rosales, Scott Carter Carvajal, Jill Eileen Guernsey De Zapien, 2017-02-16 US-Mexico border region area has unique social, demographic and policy forces at work that shape the health of its residents as well as serves as a microcosm of migration health challenges facing an increasingly mobile and globalized world. This region reflects the largest migratory flow between any two nations in the world. Data from the Pew Research Center shows over the last 25 years there has never been lower than 140,000 annual immigrants from Mexico to the United States (with peaks over 700,000). This migratory route is extremely hazardous due to natural (e.g., arid and hot desert regions) and human made barriers as well as border enforcement practices tied to socio-political and geopolitical pressures. Also, reflecting the national interdependency of public health and human services needs, during the most recent five year period surveyed the migratory flow between the US and Mexico has equaled that of the flow of Mexico to the US--both around 1.4 million persons. Of particular public health concern, within the US-Mexico region of both nations there is among the highest disparities in income, education, infrastructure and access to health care--factors within the World Health Organization's conceptualization of the Social Determinants of Health, and among the highest rates of chronic disease. For instance obesity and diabetes rates in this region are among the highest of those monitored in the world, with adult population estimates of the former over 40% and estimates in some population sub-groups for the latter over 20%. The publications reflected in this Research Topic, all reviewed from experts in the field, addressed many of the public health issues in the US Mexico Border Health Commission's Healthy Border 2020 objectives. Those objectives--broad public health goals used to guide a diverse range of government, research and community-based stakeholders--include Non Communicable Diseases (including adult and childhood obesity-related ones; cancer), Infectious Diseases (e.g., tuberculosis; HIV; emerging diseases--particularly mosquito borne illnesses), Maternal and Child Health, Mental Health Disorders, and Motor Vehicle Accidents. Other relevant public health issues affecting this region, for example environmental health, binational health services coordination (e.g., immunization), the impact of migration throughout the Americas and globally in this region, health issues related to the physical climate, access to quality health care, discrimination/mistreatment and well-being, acculturative/immigration stress, violence, substance use/abuse, oral health, respiratory disease, and well-being from a social determinants of health framework, are critical areas addressed in these publications or for future research. Each of these Research Topic publications presented applied solutions (e.g., new programs, technology or infrastructure) and/or public health policy recommendations relevant to each public health challenge addressed.

Latent Variable Modeling with R W. Holmes Finch, Brian F. French, 2015-06-26 This book demonstrates how to conduct latent variable modeling (LVM) in R by highlighting the features of each model, their specialized uses, examples, sample code and output, and an interpretation of the results. Each chapter features a detailed example including the analysis of the data using R, the relevant theory, the assumptions underlying the model, and other statistical details to help readers better understand the models and interpret the

results. Every R command necessary for conducting the analyses is described along with the resulting output which provides readers with a template to follow when they apply the methods to their own data. The basic information pertinent to each model, the newest developments in these areas, and the relevant R code to use them are reviewed. Each chapter also features an introduction, summary, and suggested readings. A glossary of the text's boldfaced key terms and key R commands serve as helpful resources. The book is accompanied by a website with exercises, an answer key, and the in-text example data sets. Latent Variable Modeling with R: -Provides some examples that use messy data providing a more realistic situation readers will encounter with their own data. -Reviews a wide range of LVMs including factor analysis, structural equation modeling, item response theory, and mixture models and advanced topics such as fitting nonlinear structural equation models, nonparametric item response theory models, and mixture regression models. -Demonstrates how data simulation can help researchers better understand statistical methods and assist in selecting the necessary sample size prior to collecting data. -www.routledge.com/9780415832458 provides exercises that apply the models along with annotated R output answer keys and the data that corresponds to the in-text examples so readers can replicate the results and check their work. The book opens with basic instructions in how to use R to read data, download functions, and conduct basic analyses. From there, each chapter is dedicated to a different latent variable model including exploratory and confirmatory factor analysis (CFA), structural equation modeling (SEM), multiple groups CFA/SEM, least squares estimation, growth curve models, mixture models, item response theory (both dichotomous and polytomous items), differential item functioning (DIF), and correspondance analysis. The book concludes with a discussion of how data simulation can be used to better understand the workings of a statistical method and assist researchers in deciding on the necessary sample size prior to collecting data. A mixture of independently developed R code along with available libraries for simulating latent models in R are provided so readers can use these simulations to analyze data using the methods introduced in the previous chapters. Intended for use in graduate or advanced undergraduate courses in latent variable modeling, factor analysis, structural equation modeling, item response theory, measurement, or multivariate statistics taught in psychology, education, human development, and social and health sciences, researchers in these fields also appreciate this book's practical approach. The book provides sufficient conceptual background information to serve as a standalone text. Familiarity with basic statistical concepts is assumed but basic knowledge of R is not.

Cross-Cultural Analysis Michael Minkov, 2012-06-06 Cross-Cultural Analysis is the sequel to Culture's Consequences, the classic work published by Geert Hofstede, one of the most influential management thinkers in today's times. Hofstede's original work introduced a new research paradigm in cross-cultural analysis: studying cultural differences through nation-level dimensions (complex variables defined by intercorrelated items). This paradigm has been subsequently used by hundreds of prominent scholars all over the world and has produced solid results. This new text takes the next step: It critically examines in one comprehensive volume the current, prevalent approaches to cross-cultural analysis at the level of nations that have been developed since Hofstede's work, offering students and researchers the theoretical and practical advantages and potential pitfalls of each method. The book is structured into four distinct parts. Parts I and II focus on the main theoretical and statistical issues in cross-cultural analysis using Hofstede's approach and the different research methods now associated with it. Part II consists of presentations of all well-known (and some lesser known) large-scale cross-cultural studies since Hofstede's work that have explained cross-cultural variation in terms of dimensional models. Part III summarizes the main conclusions to be drawn from the presentations in Part II and I explains how the proposed models have contributed to our practical understanding of cross-cultural diversity.

iTeam William Perry, 2013-07-15 This is the digital version of the printed book (Copyright © 2009). It will surprise few professionals working in software development today to read that teams and teamwork are critical ingredients of a global economy. Productivity, product development and release, and even a company's survival increasingly will depend on teams to solve business problems. What may come as a surprise -- and a wake-up call --

is that, in many businesses, teams are completely ineffective. One reason, posits William E. Perry in *iTeam: Putting the I Back into Team*, is that most organizations put too much emphasis on joint effort, removing responsibility, ownership, and reward from individuals appointed to teams. What typically results is dysfunctional, essentially leaderless, and lacking in motivation. Perry's call to put the emphasis back on individual responsibility among collaborating teammates is an urgent one. Decisions now made by management will more and more frequently be made and implemented by teams, making it necessary for organizations to ensure that the creativity and innovative methods of individuals be retained on teams. Through extensive team experience and interviews with hundreds of individuals who have spent thousands of hours in team meetings, Perry has identified the attributes of great teams and great teamwork. *iTeam* examines the ten biggest challenges standing between most teams and excellence and explores in depth the fifty best practices teams can employ to improve performance. Concluding that world-class teams comprise individuals who do what is right for their organization, and do what is right the right way, *iTeam* presents a clear, practical argument for building teams that have at their core a strong, proven leader who encourages and motivates team members to fulfill their team responsibilities. Topics include: Reengineering the Team Approach to Problem Solving The Top-Ten Challenges to Effective Teamwork Selecting a Team Leader Who Will Lead Defining Team Entrance and Exit Criteria Selecting Team Members for Specific Roles Building Trust Among Team Members Training Team Members to Accomplish Their Assignments Listening to the Voice of the Customer Breaking Down Silos Avoiding Groupthink Assuring That Team Efforts Are Successful Rewarding Individual Team Members Keeping Teamwork Competitive Emerging Team Practices and much more

Battle-Rap, Beatboxing und Breaking - Hip-Hop in schulischen und außerschulischen musikpädagogischen Kontexten Christiane Viertel, 2020 Die weltweit verbreitete Jugendkultur Hip-Hop mit ihren vielfältigen musikalischen und künstlerischen Praxen ist auch heute nach fast 50 Jahren bei Jugendlichen beliebt. Die quantitative Studie fokussiert die Hip-Hop-Kultur als Thema im Musikunterricht der Sekundarstufe I in Baden-Württemberg aus der Perspektive von Schüler*innen und Lehrenden unterschiedlicher Schulformen. Sie nimmt dabei Bezug auf das Interesse an und die Beschäftigung mit der Jugendkultur wie auch auf die persönliche Bedeutsamkeit von Hip-Hop. Außerdem stellt die Dissertation die Frage nach dem Bildungspotenzial der Jugendkultur. Eine detaillierte Betrachtung szenerelevanter Praxen im Hip-Hop setzt die hierfür benötigten Skills sowie zugrunde liegende Haltungen und

Werte in Beziehung zu musikpädagogischen Dimensionen von Bildungsrelevanz. Betrachtet werden in diesem Zusammenhang Anschlussfähigkeiten und Schnittstellen zu Aspekten der Kompetenzorientierung, der ästhetischen Erfahrung sowie zum Ziel der kulturellen Teilhabe. Ein Blick auf Projekte der außerschulischen Jugendsozialarbeit eröffnet zudem Perspektiven für die Musikpädagogik und für zukünftiges Unterrichten. Christiane Viertel studierte Musik, Deutsch und Englisch für das Lehramt und arbeitete lange Jahre als Lehrerin. Nach einem Magisterstudium in Musikpädagogik und Anglistik promovierte sie zunächst berufsbegleitend. Seit 2009 arbeitete sie außerdem als Lehrbeauftragte an der Pädagogischen Hochschule Ludwigsburg im Fach Musik. Dort ist sie seit 2017 Akademische Mitarbeiterin. Ihre Arbeitsschwerpunkte sind empirische Unterrichtsforschung und Themen aktueller Musikdidaktik.

Selektion im Gymnasium Annika Hillebrand, 2014 Bei unbefriedigenden Schülerleistungen machen deutsche Lehrkräfte vergleichsweise häufig Gebrauch von den Ausleseinstrumenten der Zurück- und Abstufung. In dieser Studie wird der Blick vorwiegend auf die frühzeitigen Abgänge aus dem Gymnasium in Bildungsgänge mit niedrigerem Anspruchsniveau in Nordrhein-Westfalen gerichtet. Zwar geht die zunehmende Öffnung des Gymnasiums im Kontext der Bildungsexpansion der letzten Jahrzehnte mit einer deutlichen Senkung der Abstufungs- und Wiederholerquoten einher, dennoch werfen die starken regionalen Unterschiede hinsichtlich der selektiven Praxis der Gymnasien die Frage nach den Ursachen auf und lassen Zweifel daran aufkommen, dass allein die Schulleistungen und individuelle Merkmale der Schülerinnen und Schüler ausschlaggebend für schulischen Misserfolg sind. Mithilfe von Daten aus der amtlichen Schulstatistik und einer Lehrerbefragung wird der Zusammenhang zwischen schulischen Bedingungsfaktoren und dem Schulversagen im Gymnasium analysiert. Dazu werden strukturelle Rahmenbedingungen wie die Klassengröße oder der Migrationsanteil der Schulen sowie pädagogische Prozessmerkmale wie das Schulklima oder persönliche Einstellungen der Lehrkräfte in Verbindung zur Auslesepraxis gesetzt. Dr. phil. Annika Hillebrand ist seit 2009 wissenschaftliche Mitarbeiterin am Institut für Schulentwicklungsforschung (IFS) der TU Dortmund. Ihre Arbeits- und Forschungsschwerpunkte liegen in der Bildungsberichterstattung, Schulentwicklungsplanung, Durchlässigkeit des Schulsystems und der Analyse quantitativer Strukturdaten.
