iRODS Primer Arcot Rajasekar,Reagan Moore,Chien-Yi Hou,Christopher A. Lee,2022-05-31 Policy-based data management enables the creation of community-specific collections. Every collection is created for a purpose. The purpose defines the set of properties that will be associated with the collection. The properties are enforced by management policies that control the execution of

procedures that are applied whenever data are ingested or accessed. The procedures generate state information that defines the outcome of enforcing the management policy. The state information can be queried to validate assessment criteria and verify that the required collection properties have been conserved. The integrated Rule-Oriented Data System implements the data management framework required to support policy-based data management. Policies are turned into computer actionable Rules. Procedures are composed from a Micro-service-oriented architecture. The result is a highly extensible and tunable system that can enforce management policies, automate administrative tasks, and periodically validate assessment criteria. accessible guide shows newcomers how to create a
full-featured Linux desktop setup that's
comparable to a Windows system Substantially

revised and updated with new material on setting up a wireless home network, recycling an old Windows computer as a Linux home-networking server, running Linux on a laptop, editing digital photos, managing and playing audio and video, using open source productivity software, and more The DVD features the full Fedora Core installation and Fedora Core CD ISOs; there's also a coupon for readers who prefer to get Fedora Core on CD-ROM A companion Web site provides installation options and information on other popular Linux distributions, including SuSE, Mandriva, Linspire, Knoppix, and Ubuntu Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.

  Fear and Anxiety Jack M. Gorman,2008-05-20 Animals, like people, experience fear and avoidance, which can be reliably observed, quantified, and manipulated in almost all species. Remarkably, as this volume demonstrates, the neural circuits responsible for the acquisition and expression of fear are conserved throughout phylogeny from rodents through nonhuman primates to humans. Thus, what is discovered about the neuroanatomy and physiology of fear in a mouse can be usefully translated to a human with an anxiety disorder. This breakthrough in both neuroscience and mental health research is detailed in 14 fascinating chapters that cover Conditioned fear -- Many scientists have convincingly documented that the amygdala is the essential brain structure in an animal's exhibition of conditioned fear, with the hippocampus required for contextual memory of conditioned fear. Though debate

continues, other studies show that the anatomic and physiological findings about conditioned fear are robustly applicable to other forms of fear. The brain structures involved in fear -- The data clearly show that the amygdala is the one area most consistently energized in fear responses of nonhuman and human primates. Patients with anxiety disorders have a lower threshold for amygdala activation than do control subjects; thus, fear cues that do not register an amygdala response in most individuals will do so in anxious patients. Stress effects on brain structure -- It is possible that, based on both animal studies and clinical studies of children and adults, chronic exposure to fear may have deleterious effects on the structural integrity of the brain. The hippocampus appears to be particularly vulnerable, though stress damage may also occur in regions of the prefrontal cortex, such as the anterior cingulate. The results of translational research can raise concerns that observed negative changes in animal brains might apply to humans, but they can also suggest advantageous interventions, with both psychosocial and psychopharmacology approaches proving effective in reversing not only anxiety disorders but even some changes in the brain. Best of all, using these scientific models of brain function, we can now see psychotherapy and medication as complementary rather than antagonistic, with each addressing different parts of the same fear circuitry. The synthesis of knowledge in this groundbreaking work will appeal to practitioners and students alike, and justifies the optimism of its distinguished contributors

that psychiatric research is at last in an era in which unprecedented insights will be gained and progress made toward better treatments.

  Distributed Applications and Interoperable Systems Marta Patiño-Martínez,João Paulo,2023-06-08 This book constitutes the refereed proceedings of the 23rd IFIP WG 6.1 International Conference on Distributed Applications and Interoperable Systems, DAIS 2023, held in Lisbon, Portugal, during June 19-23, 2023, as part of the 18th International Federated Conference on Distributed Computing Techniques, DisCoTec 2023.   Mobile Point-of-Care Monitors and Diagnostic Device Design Walter Karlen,2018-09-03 Efficient mobile systems that allow for vital sign monitoring and disease diagnosis at the point of care can help combat issues such as rising healthcare costs, treatment delays in remote and resource-poor areas, and the global shortage of skilled medical personnel. Covering everything from sensors, systems, and software to integration, usability, and regulatory challenges, Mobile Point-of-Care Monitors and Diagnostic Device Design offers valuable insight into state-of-the-art technologies, research, and methods for designing personal diagnostic and ambulatory healthcare devices. Presenting the combined

expertise of contributors from various fields, this multidisciplinary text: Gives an overview of the latest mobile health and point-of-care technologies Discusses portable diagnostics devices and sensors, including mobile-phone-based health systems Explores lab-on-chip systems as well as energy-efficient solutions for mobile point-of-care monitors Addresses computer vision and signal processing for real-time diagnostics Considers interface design for lay healthcare providers and home users Mobile Point-of-Care Monitors and Diagnostic Device Design provides important background information about the design process of mobile health and point-of-care devices, using practical examples to illustrate key aspects related to instrumentation, information processing, and implementation.

Extra Sensory Brian Clegg,2013-05-21 Extra Sensory is a pop-science look at the untapped abilities of human beings, from ESP to Telekenesis and other real life sciences that are currently being studied today, from physicist Brian Clegg. We'd all love to have 'psi' abilities like telepathy, telekinesis, and remote viewing. But is there any solid evidence to back up these talents, or are they nothing more than fantasy? We still only understand a small percentage of the capabilities of the human brain—and we shouldn't dismiss such potential powers out of hand. Although there is no doubt that many who claim these abilities are frauds, and no one has yet won James Randi's $1M prize for demonstrating ESP under lab conditions, we still have a Nobel prize winner suggesting a mechanism for telepathy, serious scientists researching the field and university projects that produced potentially explosive results. What's the verdict? By looking at possible physical mechanisms for ESP and taking in the best scientific evidence, the reader can discover if this is all wishful thinking and deception, or a fascinating reality. The truth is out there.
