Digital Logic Design B. Holdsworth,2014-05-12
Digital Logic Design, Second Edition provides a
basic understanding of digital logic design with
emphasis on the two alternative methods of design
available to the digital engineer. This book
describes the digital design techniques, which
have become increasingly important. Organized into
14 chapters, this edition begins with an overview
of the essential laws of Boolean algebra, K-map
plotting techniques, as well as the simplification
of Boolean functions. This text then presents the
properties and develops the characteristic
equations of a number of various types of flip-
flop. Other chapters consider the design of
synchronous and asynchronous counters using either
discrete flip-flops or shift registers. This book
discusses as well the design and implementation of
event driven logic circuits using the NAND
sequential equation. The final chapter deals with
simple coding techniques and the principles of
error detection and correction. This book is a
valuable resource for undergraduate students,
digital engineers, and scientists.

   *Geospatial Analytics for Environmental Pollution Modeling* Fayma Mushtaq,Majid Farooq,Alok Bhushan Mukherjee,Mili Ghosh Nee Lala,2023-12-01 This book aims to provide a comprehensive study on various aspects of environmental pollution dynamics using geospatial technology and modeling techniques. The utility of geospatial technology will be demonstrated for the effective study of environmental pollution, as space and location are very important for effective environmental health surveillance. The timeliness of the work is due to the increasing relevance of geospatial technology applications in environmental health investigations. Moreover, different types of pollution are covered in detail, including air and soil, all of which are analyzed using latest Remote Sensing and GIS technology. The basics of environmental pollution and its impacts are covered in the book's first part, while the second part focuses on the use of geospatial technology in investigating and modeling various instances of environmental pollution. The third part discusses policy measures for mitigating environmental

pollution hazards, using geospatial analyses and data to craft informed policy decisions. The primary audience for the book is researchers working in the field of environmental pollution with incorporation of geospatial technology, including upper-level undergraduate and graduate students taking courses in remote sensing and its environmental applications. The secondary audience is academicians, planners, environmentalists and policymakers working in the field of environment protection and management.
