Usage and Potential of Language Learning Apps Luca Diehl, 2020-03-16 Bachelor Thesis from the year 2019 in the subject English Language and Literature Studies - Linguistics, grade: 1,3, University of Trier, language: English, abstract: The goal of this thesis is to find out how often language learning apps are already used and to analyze their potential for the upcoming years, i.e. whether they might be able to supplement or even replace traditional language classes one day. The study presented in this thesis consists of two parts: an analysis of the term language learning app, their user numbers and their teaching methods in order to be able to find their strengths and weaknesses and a survey conducted among students of the University of Trier in which they were asked about their past usage of language learning apps, as well as their attitudes and opinions towards language learning apps in general, including their opinions about the potential of language learning apps. Not long ago, mobile phones were only a means of communication and it was hard to imagine that one day they could fulfil literally hundreds of tasks. Today, thanks to mobile apps, they can be a map, a book, a video game and even a spirit level all at once. One of their most valuable new features, though, are educational apps. They allow users to learn anything from coding to chemical elements to languages and have been changing the educational landscape ever since. Language learning apps have been especially disruptive. No other type of educational apps is used as often as they are. Today, apps like Duolingo and Babbel have more than 100 million active users, with their numbers increasing by the day. They offer courses in languages from Spanish to Hawaiian and are no longer limited to vocabulary teaching only.

Thing Translator: An Efficient Way to Classify Different Things Vyom Makwana, Keyur Babariya, Vishakha Shelke, 2021-10-05 Translation is the communication of a source-language text into an equivalent target-language text. A translator always risks in advertently introducing source-language words, grammar, or syntax into the target-language rendering. Thing Translator is an open-source offline application that uses the modern machine learning techniques - namely, computer vision and natural language translation. Thing Translator is a web app that lets you point your phone at particular object to hear it in a different language. The task of the translator here is to maintain a delicate balance between the source language and the language of translation. Thing translator is using Google's Translate API's and cloud vision as it was developed by Google as a part of AI experiment. The main reason behind building this application is to help each and every person to know different things in many languages and understand them better. When we want to travel outside our place or outside India then there may be difficulty that we may not know that language of that particular region, we find language barrier due to not understanding the language they speak there is also a language barrier if want to shop from another region. We have designed an application Thing Translator: An Efficient Way to Classify Different Things for every person to classify or recognize different things present around them. Thing translator is an android application which uses image recognition and object character recognition. This is useful to understand and to learn names of different objects just a capturing the image and also to learn pronunciation of the objects in native or other languages.

Speech-to-Speech Translation Yutaka Kidawara, Eiichiro Sumita, Hisashi Kawai, 2019-11-22 This book provides the readers with retrospective and prospective views with detailed explanations of component technologies, speech recognition, language translation and speech synthesis. Speech-to-speech translation system (S2S) enables to break language barriers, i.e., communicate each other between any pair of person on the globe, which is one of extreme dreams of humankind. People, society, and economy connected by S2S will demonstrate explosive growth without exception. In 1986, Japan initiated basic research of S2S, then the idea spread world-wide and were explored deeply by researchers during three decades. Now, we see S2S application on smartphone/tablet around the world. Computational resources such as processors, memories, wireless communication accelerate this computation-intensive systems and accumulation of digital data of speech and language encourage recent approaches based on machine learning. Through field experiments after long research in laboratories, S2S systems are being well-developed and now ready to be utilized in daily life. Unique chapter of this book is end-2-end evaluation by comparing system's performance and human competence. The effectiveness of the system would be understood by the score of this evaluation. The book will end with one of the next focus of S2S will be technology of simultaneous interpretation for lecture, broadcast news and so on.
