Private Equity Paul A. Gompers,Victoria Ivashina,Richard Ruback,2019-03-15
'Private Equity' is an advanced corporate finance book that integrates a range of topics from a private equity investor's perspective. The book presents a set of cases used in the Private Equity Finance class, an advanced elective course offered in the Harvard Business School MBA elective curriculum. The structure of the book follows the timeline of a typical investment, starting with deal sourcing, due diligence, and valuation, followed by execution of the transaction, including issues related to capital structure and governance. 'Private Equity' then transitions to examining operational changes and management of the capital structure, closing with a set of cases related to exit. Intended for readers interested in working for private equity firms, investing in private equity as limited partners, or providing investment banking or consulting services to private equity firms, 'Private Equity' is also appropriate for readers who are interested in a more detailed exploration of corporate finance.

Structural & Construction Conf Franco Bontempi,2003-01-01 Objective of conference is to define knowledge and technologies needed to design and develop project processes and to produce high-quality, competitive, environment- and consumer-friendly structures and constructed facilities. This goal is clearly related to the development and (re)-use of quality materials, to excellence in construction management and to reliable

measurement and testing methods.

Transport Infrastructure, City Productivity Growth and Sectoral Reallocation: Evidence from China Yang Yang, 2018-12-11 This paper examines the impact of highway expansion on aggregate productivity growth and sectoral reallocation between cities in China. To do so, I construct a unique dataset of bilateral transportation costs between Chinese cities, digitized highway network maps, and firm-level census. I first derive and estimate a market access measure that summarizes all direct and indirect impact of trade costs on city productivity. I then construct an instrumental variable to examine the causal impact of highways on economic outcomes and the underlying channels. The results suggest that highways promoted aggregate productivity growth by facilitating firm entry, exit and reallocation. I also find evidence that the national highway system led to a sectoral reallocation between cities in China.
