Radio Girl David Dufty,2020-04-28 All around Australia, former WRANs and navy men regard the woman they know as Mrs Mac with a level of reverence usually reserved for saints. Yet today no-one has any idea of who she was and how she rescued Australia's communication systems in World War II. Winner, Best 2020 Non-fiction, ACT Notable Awards As you climbed the rickety stairs of an old woolshed at Sydney harbour in 1944, you would hear the thrum of clicks and buzzes. Rows of men and women in uniforms and headsets would be tapping away vigorously at small machines, under the careful watch of their young female trainers. Presiding over the cacophony was a tiny woman, known to everyone as 'Mrs Mac', one of Australia's wartime legends. A smart girl from a poor mining town who loved to play with her father's tools, Violet McKenzie became an electrical engineer, a pioneer of radio and a successful businesswoman. As the clouds of war gathered in the 1930s, she defied convention and trained young women in Morse code, foreseeing that their services would soon be sorely needed. Always a champion of women, she was instrumental in getting Australian women into the armed forces.

Mrs Mac was adored by the thousands of young women and men she trained, and came to be respected by the defence forces and the public too for her vision and contribution to the war effort. David Dufty brings her story to life in this heartwarming and captivating biography. '[An] incredible and inspiring life... Dufty's new biography captures her unwavering dedication in the face of adversity.' - Professor Genevieve Bell, Australian National University 'A cracking story about the famous Australian radio engineer you've never heard of.' - Dick Smith, entrepreneur and philanthropist

Theremin Albert Glinsky, 2000 LEON THEREMIN led a life of flamboyant musical invention laced with daring electronic stealth. A creative genius and prolific inventor, Theremin launched the field of electronic music virtually singlehandedly in 1920 with the musical instrument that bears his name. The theremin -- the only instrument that is played without being touched -- created a sensation worldwide and paved the way for the modern synthesizer. Its otherworldly sound became familiar in sci-fi films

and even in rock music. This magical instrument that charmed millions, however, is only the beginning of the story. As a Soviet scientist, Theremin surrendered his life and work to the service of State espionage. On assignment in Depression-era America, he became the toast of New York society and worked the engines of capitalist commerce while passing data on U.S. industrial technology to the Soviet apparat. Following his sudden disappearance from New York in 1938, Theremin was exiled to a Siberian labor camp. He subsequently vanished into the top-secret Soviet intelligence machine and was presumed dead for nearly thirty years. Using the same technology that lay behind the theremin, he designed bugging devices that eavesdropped on U.S. diplomatic offices and stood at the center of a pivotal cold war confrontation. Throughout his life, Theremin developed many other electronic wonders, including one of the earliest televisions and multimedia devices that anticipated performance art and virtual reality by decades. In this first full biography of Leon Theremin, Albert Glinsky depicts the inventor's nearly one-hundred-year life span as a microcosm of the twentieth century. Theremin is seen at the epicenter of most of the major events of the century: the Russian Revolution, two world wars, America's Great Depression, Stalin's purges, the cold war, and perestroika. His life emerges as no less than a metaphor for the divergence of communism and capitalism. Theremin blends the whimsical and the treacherous into a chronicle that takes in everything from the KGB to Macy's store windows, Alcatraz to the Beach Boys, Hollywood thrillers to the United Nations, Joseph Stalin to Shirley Temple. Theremin's world of espionage and invention is an amazing drama of hidden loyalties, mixed motivations, and an irrepressibly creative spirit.

Colin Furze's bonkers and brilliant inventions such as a homemade hoverbike, DIY Wolverine Claws, an alarm clock ejector bed, and Hoover shoes have earned him 4.5

million YouTube subscribers and more than 450 million video views. Now Colin is on a mission to inspire a new generation of budding inventors with *This Book Isn't Safe!* *This Book Isn't Safe* contains instructions on how to make ten brand new inventions with a basic at-home toolkit, alongside behind-the-scenes stories about some of Colin's greatest inventions and top secret tips and tricks straight from his invention bunker (aka a shed in his backyard in Stamford Lincolnshire).

Ignore Everybody Hugh MacLeod, 2009-06-11 When Hugh MacLeod was a struggling young copywriter, living in a YMCA, he started to doodle on the backs of business cards while sitting at a bar. Those cartoons eventually led to a popular blog - gapingvoid.com - and a reputation for pithy insight and humor, in both words and pictures. MacLeod has opinions on everything from marketing to the meaning of life, but one of his main subjects is creativity. How do new ideas emerge in a cynical, risk-averse world? Where does inspiration come from? What does it take to make a living as a creative person? Now his first book, *Ignore Everyone*, expands on his sharpest insights, wittiest cartoons, and most useful advice. A sample: *Selling out is harder than it looks. Diluting your product to make it more commercial will just make people like it less. *If your plan depends on you suddenly being discovered by some big shot, your plan will probably fail. Nobody suddenly discovers anything. Things are made slowly and in pain. *Don't try to stand out from the crowd; avoid crowds altogether. There's no point trying to do the same thing as 250,000 other young hopefuls, waiting for a miracle. All existing business models are wrong. Find a new one. *The idea doesn't have to be big. It just has to be yours. The sovereignty you have over your work will inspire far more people than the actual content ever will. After learning MacLeod's 40 keys to creativity, you will be ready to unlock your own brilliance and unleash it on the world.

Digital Participation through Social Living Labs Michael

Dezuanni, Marcus Foth, Kerry Mallan, Hilary Hughes, 2017-08-16
Digital Participation through Social Living Labs connects two largely separate debates: On the one hand, high speed internet access and associated technologies are often heralded as a means to bring about not only connectivity, but also innovation, economic development, new jobs, and regional prosperity. On the other hand, community development research has established that access by itself is necessary but not sufficient to foster digital participation for the broadest possible range of individuals. Edited by leading scholars from the fields of education, youth studies, urban informatics, librarianship, communication technology, and digital media studies, this book is positioned as a link to connect these debates. It brings together an international collection of empirically grounded case studies by researchers and practitioners from diverse backgrounds. They advance knowledge that fosters digital participation by identifying the specific digital needs, issues and practices of different types of communities as they seek to take advantage of access to digital technologies. Collectively, these cases propose new ways for enabling residents to develop their digital confidence and skills both at home and in their local community, particularly through a 'social living labs' approach. The book is organised around key focus areas: digital skills enhancement, youth entrepreneurship, connected learning, community digital storytelling, community-led digital initiatives and policy development.
