The International Jute Commodity System Chhabilendra Roul,2009 The jute commodity system as prevalent in the Indian subcontinent is a conglomeration of paradoxes. Jute was once called the golden fibre on account of its contribution to means of livelihood to millions of farmers, traders, manufacturers in the unorganized sector, mill workers in the organized sector as well scores of people employed in the service sector relating to trading, manufacturing and exports of jute and jute goods. Jute industry along with textile manufacturing provided the foundation of modern manufacturing industry in India. Simultaneously, this industry was also the fountain head of the growth of private entrepreneurship and capital in India. Most of the traditional Industrial Houses in India grew out of trading and manufacturing of jute and jute goods, coal and tea. On the other hand most of the farmers involved in cultivation of natural fibres like jute are small and marginal farmers. Without alternative avenues of gainful employment elsewhere, these millions in South Asia would be deprived of a part of their livelihood. The entire commodity chain of natural fibres is characterized by low productivity, low value addition, high volumes and low returns. The advent and discovery of mineral oil helped exploit cheap HDPE and PP polyethylene sacks, which started replacing the natural fibre based packaging materials. As a result, the jute industry got wiped out from Europe, America and the Far East. Today, it is survived in the Indian subcontinent and to a lesser extent in Brazil. The unique feature of the volume is that it focuses on the first hand experience of the policy-makers and other stakeholders in the jute commodity system, who are confronted with a dilemma of reviving a declining economic subsector. At this juncture, when there is need for a Commodity Development Strategy suitable to the ethos of a commodity like the jute fibre, the present, volumes attempts to devise such a strategy thorough analysis of the system based on authentic and up-to-date information. The Book furnishes an erudite analysis and stock-taking of the jute commodity system. This analysis points out to the fact that there is a need for a holistic, systemic approach to the problems being faced by this sector focusing on the economic exploitation of the whole jute plant; holistic research for addressing productivity and processing efficiency in the entire commodity chain of jute; and creating a network of organisations for advocacy for jute and allied fibres, which would focus on repositioning the golden fibre as sustainable and eco-friendly commodity with the help of green and sustainable development advocacy groups. The Commodity Development Strategy highlights the need for greater effort for significant degree of product diversification which would entail significant consumption of the fibre or fabric in volume terms. The volume ends with an optimistic note with ideas of inclusive development under the Millennium Development Goals and Carbon Credits Sustainable Development under the United Nations Framework Convention on Climate Change the welcome paradigm shifts in the approach to the jute sector. The effort by Sh Roul is a timely one on the eve of the observance of 2009 as International Year for Natural Fibres by the United Nations. The book is quite comprehensive with its focus on a wide range of issues pertaining to the jute agri-commodity system addressed against a historical background and from macro-economic analytical perspective. The volume offers stimulating reading for those interested in the dynamics of agricultural commodity systems like jute and allied fibres. The book is expected to help sensitise national governments, international organizations and nongovernmental organizations towards the eco-sustainability of jute as a natural fibre. The book can serve as an excellent reference book for post-graduate students in economics, jute and textiles management, development studies, regional development and agriculture and agro-marketing.

**Television at Work** Kit Hughes,2020-01-06 This book explores how work, television, and waged labor come to have meaning in our everyday lives. However, it is not an analysis of workplace sitcoms or quality dramas. Instead, it explores the forgotten history of how American private sector workplaces used television in the twentieth century. It traces how, at the hands of employers, television physically and psychically managed workers and attempted to make work meaningful under the sign of capitalism. It also shows how the so-called domestic medium helped businesses shape labor relations and information architectures foundational to the twinned rise of the technologically mediated corporation and a globalizing information economy. Among other things, business and industry built extensive private television networks to distribute live and taped programming, leased satellite time for global 'meetings' and program distribution, created complex CCTV data search and retrieval systems, encouraged the use of videotape for worker self-evaluation, used video cassettes for training distributed workforces, and wired cantinas for employee entertainment. Television at work describes the myriad ways the medium served business' attempts to shape employees' relationships to their labor and the workplace in order to secure industrial efficiency, support corporate expansion, and inculcate preferred ideological orientations. narrowcasting, immediacy, time-shifting, flow, Post-Fordism, labor, audience labor, video, satellite, CCTV--

Automotive Global Value Chain Wilson Kia Onn Wong,2017-08-09 Today, some suppliers have grown increasingly powerful and in certain cases, earn revenues that rival or even exceed that of their automaker clients. In the pre-globalisation period, automakers wielded absolute power over their significantly smaller suppliers. This book reveals the upending of this relationship, with the gradual shift in the balance of power from automakers to their suppliers in this era of globalisation. The book examines how suppliers in the global tyres, seats, constant velocity joints (hereafter 'CVJs'), braking systems and automotive semiconductor industries have evolved into powerful oligopolies through a mix of acquisition and organic growth strategies. It also highlights how joint ventures could be strategically deployed as springboards to acquisition, as they enable firms to familiarise themselves with their partners' markets and operations. Moreover, the book analyses the disruption stirred by the entry of well-resourced technology titans into this industry and their inevitable clash with the traditional incumbents. This book is an invaluable reference for anyone interested in learning more about the automakers' and now their suppliers' relentless quest to create market-dominating intelligent driving systems.

*Handbook of Web Based Energy Information and Control Systems* Barney L. Capehart,Timothy Middelkoop,2020-12-22 This book promotes the benefits of the development and application of energy information and control systems. This wave of information technology (IT) and web-based energy information and control systems (web based EIS/ECS) continues to roll on with increasing speed and intensity. This handbook presents recent technological advancements in the field, as well as a compilation of the best information from three previous books in this area. The combined thrust of this information is that the highest level functions of the building and facility automation system are delivered by a web based EIS/ECS system that provides energy management, facility management, overall facility operational management and ties in with the enterprise resource management system for the entire facility or the group of facilities being managed.
