Refugee Protection in Brazil and Latin America - Selected Essays Liliana Lyra Jubilut,2018-05-05 Refugees and their protection have started to be a part of daily conversation in recent years. New flows from Africa to Europe, new crisis in Asia and in the Americas, and record numbers since the Second World War, for instance, have paved the way for news reports in the media, political discourses on the topic and debates on how to actually protect these persons. In a world scenario of increasingly (i) closed borders, (ii) association of migration to security issues, (iii) lack of political will to ascertain human rights and (iv) disregard for migration as a right in se, the challenges on and for refugees' protection have been progressing; as have the need for international protection of persons fleeing well-founded fear of persecution due to their race, religion, nationality, political opinion or membership to a social group, i.e. refugees. Regional approaches and national practices gain relevance, especially if they can be seen as good practices, even if not without flaws. "What are the main challenges and opportunities regarding Refugee Protection in Latin America and in Brazil? The book offers a very convincing response. The essays by Liliana Jubilut reflect rigorous academic research and years of practical experience on supporting asylum seekers and refugees. The author is certainly one of the most influential scholars in Brazil working in the Forced Migration field, and the essays provide a comprehensive view of Refugee Protection in Brazil and Latin America". – Gabriel Gualano de Godoy, PhD, UNHCR Chief of Mission in the Dominican Republic and former Head of UNHCR Protection Unit in Brazil. "This book shed clear lights on the development of refugee protection in Latin America for the years to come. Liliana Jubilut is already a leading scholar on refugee protection in Latin America and her articles reflect a long myriad of issues related to refugee protection, since status determination, resettlement, local integration and the remarkable humanitarian visas for the Syrian refugees. She shows the developments and setbacks and recover the most important developments since the Cartagena Declaration with a sharp eye and historical perspective. This book will soon become an essential bibliography for anyone trying to understand the particular and innovative refugee protection initiatives in this troubled but generous region". – Wellington Pereira Carneiro, PhD, UNHCR Senior Official (having worked in Brazil and Colombia for UNHCR and in Panama prior to joining the UN)

Modern Perspectives in Type-Theoretical Semantics Stergios Chatzikyriakidis,Zhaohui Luo,2017-02-07 This book is a collective volume that reports the state of the art in the applications of type theory to linguistic semantics. The volume fills a 20 year gap from the last published book on the issue and aspires to bring researchers closer to cutting edge alternatives in formal semantics research. It consists of unpublished work by some key researchers on various issues related to the type theoretical study of formal semantics and further exemplifies the advantages of using modern type theoretical approaches to linguistic semantics. Themes that are covered include modern developments of type theories in formal semantics, foundational issues in linguistic semantics like anaphora, modality and plurals, innovational interdisciplinary research like the introduction of probability theory to type theories as well as computational implementations of type theoretical approaches. This volume will be of great interest to formal semanticists that are looking for alternative ways to study linguistic semantics, but will also be of interest to theoretical computer scientists and mathematicians that are interested in the applications of type theory.

Mathematical Methods for Economic Theory 1 James C. Moore,1999-10-19 This two-volume work functions both as a textbook for graduates and as a reference for economic scholars. Assuming only the minimal mathematics background required of every second-year graduate, the two volumes provide a self-contained and careful development of mathematics through locally convex topological vector spaces, and fixed-point, separation, and selection theorems in such spaces. Volume One covers basic set theory, sequences and series, continuous and semi-continuous functions, an introduction to general linear spaces, basic convexity theory, and applications to economics.

Structure Theory Helmut Strade,2008-08-22 The problem of classifying the finite-dimensional simple Lie algebras over fields of characteristic $p > 0$ is a long-standing one. Work on this question during the last 45 years has been directed by the Kostrikin–Shafarevich Conjecture of 1966, which states that over an algebraically closed field of characteristic $p > 5$ a finite-dimensional restricted simple Lie algebra is classical or of Cartan type. This conjecture was proved for $p > 7$ by Block and Wilson in 1988. The generalization of the Kostrikin–Shafarevich Conjecture for the general case of not necessarily restricted Lie algebras and $p > 7$ was announced in 1991 by Strade and Wilson and eventually proved by Strade in 1998. The final Block–Wilson–Strade–Premet Classification Theorem is a landmark result

of modern mathematics and can be formulated as follows: Every finite-dimensional simple Lie algebra over an algebraically closed field of characteristic $p > 3$ is of classical, Cartan, or Melikian type. In the three-volume book, the author is assembling the proof of the Classification Theorem with explanations and references. The goal is a state-of-the-art account on the structure and classification theory of Lie algebras over fields of positive characteristic leading to the forefront of current research in this field. This first volume is devoted to preparing the ground for the classification work to be performed in the second and third volume. The concise presentation of the general theory underlying the subject matter and the presentation of classification results on a subclass of the simple Lie algebras for all odd primes make this volume an invaluable source and reference for all research mathematicians and advanced graduate students in algebra.

Mass Spectrometry R A W Johnstone, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Sexual Offenders James Horley, 2008-06-30 Is there an alternative way of treating sexual offenders beyond traditional psychiatry? Sexual Offenders explores and develops personal construct theory in terms of forensic and social psychology, and examines the possibilities for sexual offender assessment and therapy. Rather than viewing sexual offenders as having a mental illness or possessing a set of pathological personality traits, personal construct theory indicates that all people learn particular ways of understanding their own experience, and use these 'personal constructs' to anticipate the future. Through a variety of experiences, sexual offenders appear to develop a set of constructs that demands a particular understanding of themselves and other people. James Horley suggests that if they desire change sexual offenders can alter these constructs through psychotherapy. Sexual Offenders describes a number of techniques used by the author and other clinicians as well as presenting new and more dynamic approaches to psychological assessment. Based on over 20 years of the author's clinical and research work, this book will provide professionals and students in the field of forensic psychology and psychiatry with an alternative way of treating sex offender clients.

Legumes as Food Ingredient Alfonso Clemente, Jose C. Jimenez-Lopez, 2021-05-07 Legume crops provide a significant source of plant-based proteins for humans. Grain legumes present outstanding nutritional and nutraceutical properties as sources of bioactive components with benefits in human health, while they are affordable food that contributes to achieving future food and feed security. Furthermore, they are major ingredients in the Mediterranean diet, playing a vital role in developing countries. Global food security requires a major re-focusing of plant sciences, crop improvement and production agronomy towards grain legumes (pulse crops) over coming decades, with intensive research to identify cultivars with improved grain characteristics, helping to develop novel legume-derived products (foods) adapted to today consumer preference. In this context, studies dealing with legume processing impact such as soaking, boiling, microwave cooking, germination, and fermentation among others, in their nutritional and anti-nutritional (i.e., food allergy) properties are of great interest in these future food developments. This Research Topic aims to bring together a collection of studies for a better understanding of current research in legume seed compounds functional properties to provide an updated and global vision of the importance of legumes in human health.

The Mathematics of Voting and Apportionment Sherif El-Helaly, 2019-05-21 This textbook contains a rigorous exposition of the mathematical foundations of two of the most important topics in politics and economics: voting and apportionment, at the level of upper undergraduate and beginning graduate students. It stands out among comparable books by providing, in one volume, an extensive and mathematically rigorous treatment of these two topics. The text's three chapters cover social choice,

yes-no voting, and apportionment, respectively, and can be covered in any order, allowing teachers ample flexibility. Each chapter begins with an elementary introduction and several examples to motivate the concepts and to gradually lead to more advanced material. Landmark theorems are presented with detailed and streamlined proofs; those requiring more complex proofs, such as Arrow's theorems on dictatorship, Gibbard's theorem on oligarchy, and Gärdenfors' theorem on manipulation, are broken down into propositions and lemmas in order to make them easier to grasp. Simple and intuitive notations are emphasized over non-standard, overly complicated symbols. Additionally, each chapter ends with exercises that vary from computational to "prove or disprove" types. The Mathematics of Voting and Apportionment will be particularly well-suited for a course in the mathematics of voting and apportionment for upper-level undergraduate and beginning graduate students in economics, political science, or philosophy, or for an elective course for math majors. In addition, this book will be a suitable read for to any curious mathematician looking for an exposition to these unpublicized mathematical applications. No political science prerequisites are needed. Mathematical prerequisites (included in the book) are minimal: elementary concepts in combinatorics, graph theory, order relations, and the harmonic and geometric means. What is needed most is the level of maturity that enables the student to think logically, derive results from axioms and hypotheses, and intuitively grasp logical notions such as "contrapositive" and "counterexample."
