Internet is, how it works, what webservers are and how to administer them, in some detail. There are chapters on writing HTML (webpages), Perl CGIs, CSS, PHP, webpage forms, and some basic JavaScripts. This book does not cover Flash, SQL, or ASP. The information provided is, however, sufficient for you to build an attractive and functional website for deployment on a Mac OS X, Linux or UNIX server.--Page 4 of cover.

Art of Java Web Development Neal Ford,2003-11-01 A guide to the skills required for state-of-the-art web development, this book covers a variety of web development frameworks. The uses of the standard web API to create applications with increasingly sophisticated architectures are highlighted, and a discussion of the development of industry-accepted best practices for architecture is included. The history and evolution toward this architecture and the reasons it is superior to previous efforts are described, and an overview of the most popular web application frameworks, their architecture, and use is provided. The same application is built in six different frameworks, allowing developers to conduct an informed comparison. An evaluation of the pros and cons of each framework is provided to assist developers in making decisions or evaluating frameworks on their own. Best practices covered include sophisticated user interface techniques, intelligent caching and resource management, performance tuning, debugging, testing, and web services.

Heavily practical, this book provides expert guidance toward discovering and exploiting flaws in mobile applications on the iOS, Android, Blackberry, and Windows Phone platforms. This book helps you secure mobile apps by demonstrating the ways in which hackers exploit weak points and flaws to gain access to data. Understand the ways data can be stored, and how cryptography is defeated Set up an environment for identifying insecurities and the data leakages that arise Develop extensions to bypass security controls and perform injection attacks Learn the different attacks that apply specifically to cross-platform apps IT security breaches have made big headlines, with millions of consumers vulnerable as major corporations come under attack. Monetizing Web 2.0 Dirk Schubert,2008-05-07 Inhaltsangabe:Abstract: Marc Hessen, president of the National Venture Capital Association, stated: The issue of venture capital hits close to home in the technology field, where investors got so badly burned with the dot-com bubble Investors learned their lessons from the poor business models of Internet companies of the late 1990s and early 2000s. Jeffrey Sohl from the UNH verified the situation: Many venture capitalists have placed more stringent demands on the businesses they invest in to show viable business models and the ability to generate revenue. In Web 1.0, you didn't even need to do that. Today, they have to show they have a real company and real customers. They need to show they can make money over time.' The burst of the New Economy bubble was the end of a hype a the begin of the development of more revenue-based business models. But which business models survived the New Economy? Why are eBay an Amazon so successful today? Which success factors have the surviving companies used? Are there similar developments in the Web 2.0?

Is the Web 2.0 even a Internet bubble, a hype or the new era of business? The history of the Internet shows the development as even the surviving and fall of new business models during the New Economy. In the first two chapters I analyse the technology and the development of the Internet and the New Economy. Which business models have been developed, which models survived the fall? The result of mistakes made till 2001 could be the experience for a new Internet era: the Web 2.0. What does the term Web 2.0 mean? In the third chapter I examine the technology basics, and in the fourth chapter the different business models. The development of this Internet era is ongoing. To identify successful business models I compare companies with different business models. The comparison is based on the review business model, the financials and the performance of the websites. With the help of software applications it is possible to identify trends. My hypothesis is: Web 2.0 companies have to concentrate more to the market places than to Advertising business models like on Web 2.0 communities; or to include this market places if possible. Wide Area Workflow Management Gerold Riempp,2012-12-06 In this volume Gerold Riempp examines the interaction of different workflow management systems (WFMS) in geographically-distributed and legally-separate organisations. This is an emerging field of research known as Wide Area Workflow Management (WAWM). He examines the technical and managerial aspects of workflow management via a framework which he has developed to describe the problems involved in WAWM and to find viable solutions. Based on this theoretical framework, the author also develops a prototype software

framework - the Wide Area GroupFlow System - to demonstrate the solutions via practical software tools. The tools will be available to the reader via the WWW. Also included are the results of case studies from some of the 15 developers who have been using this software over the past two years.

Advances in Web-Based Learning - ICWL 2004 Wenyin Liu,Yuanchun Shi,Li Qing,2004-07-14 With the rapid development of Web-based learning and new concepts like virtual cla- rooms, virtual laboratories and virtual universities, many issues need to be addressed. On the technical side, there is a need for effective technology for deployment of W- based education.On the learning side, the cyber mode of learning is very different from classroom-based learning. How can instructional developmentcope with this new style of learning? On the management side, the establishment of the cyber university - poses very different

requirements for the set-up. Does industry-university partnership provide a solution to addressing the technological and management issues? Why do we need to standardize e-learning and what can we do already? As with many other new developments, more research is needed to establish the concepts and best practice for Web-based learning. ICWL 2004, the 3rd International Conference on Web-Based Learning, was held at the Tsinghua University (Beijing, China) from August 8th to 11th, 2004, as a continued attempt to address many of the above-mentioned issues. Following the great successes of ICWL 2002 (Hong Kong) and ICWL 2003 (Australia), ICWL 2004 aimed at p-senting new progress in the technical, pedagogical, as well as management issues of Web-based learning. The conference featured a comprehensive program, including a tutorial session, a keynote talk, a main track for regular paper presentations, and an - dustrial track. We received 120 papers and accepted only 58 of them in the main track for both oral and poster presentations.
