**Model Categories** Mark Hovey,2007 Model categories are used as a tool for inverting certain maps in a category in a controllable manner. They are useful in diverse areas of mathematics. This book offers a comprehensive study of the relationship between a model category and its homotopy category. It develops the theory of model categories, giving a development of the main examples.

*Handbook of Consumer Psychology* Curtis P. Haugtvedt,Paul M. Herr,Frank R. Kardes,2018-12-07 This Handbook contains a unique collection of chapters written by the world's leading researchers in the dynamic field of consumer psychology. Although these researchers are housed in different academic departments (ie. marketing, psychology, advertising, communications) all have the common goal of attaining a better scientific understanding of cognitive, affective, and behavioral responses to products and services, the marketing of these products and services, and societal and ethical concerns associated with marketing processes. Consumer psychology is a discipline at the interface of marketing, advertising and psychology. The research in this area focuses on fundamental psychological processes as well as on issues associated with the use of theoretical principles in applied contexts. The Handbook presents state-of-the-art research as well as providing a place for authors to put forward suggestions for future research and practice. The Handbook is most appropriate for graduate level courses in marketing, psychology, communications, consumer behavior and advertising.

*Real World Applications of BIM in Construction* Thomas Burns,2015-07 Real World Applications of BIM in Construction has been written for students in the fields of construction management, construction/architectural technology, civil engineering, and others interested in exploring Building Information Modeling (BIM) as it is actually used in the world of construction. This workbook explores BIM applications of construction processes using simple and easy-to-follow tutorials. It introduces quantity takeoff, cost estimation, clash detection, simple 4-D scheduling and project visualization using common BIM tools. Additionally, the planning aspects to properly implement BIM into a project is introduced. Students and readers will find this text to be an eye-opening first step into how BIM can be used to improve the construction process providing added value to contractors, designers, and owners.This text is intended to be a dynamic workbook with tutorials illustrating the basic processes involved in the applications previously mentioned. Although there is a vast array of BIM-related software available in the marketplace, this workbook has chosen to use software that is both widely adopted with versions that are currently available at no cost to students - including Autodesk's Revit®, Autodesk's Navisworks Manage®, and Trimble's SketchUp Make®. Since most construction project managers have little to no knowledge of how models are created by designers, this workbook focuses only on construction applications related to BIM and assumes that the reader has no previous exposure to BIM software. The workbook comes with a pre-packaged CD containing all the model files the student will need to complete the tutorials and assignments.
