The Stuff Games Are Made Of Pippin Barr, 2023-08-01 A deep dive into practical game design through playful philosophy and philosophical play. What are video games made of? And what can that tell us about what they mean? In *The Stuff Games Are Made Of*, experimental game maker Pippin Barr explores the materials of video game design. Taking the reader on a deep dive into eight case studies of his own games, Barr illuminates the complex nature of video games and video game design, and the possibilities both offer for exploring ideas big and small. Through a variety of engaging and approachable examples, Barr shows how every single aspect of a game—whether it is code, graphics, interface, or even time itself—can be designed with and related to the player experience. Barr's experimental approach, with its emphasis on highly specific elements of games, will leave readers armed with intriguing design philosophy, conceptual rigor, and diverse insights into the inner life of video games. Upon finishing this book, readers will be ready to think deeply about the nature of games, to dive into expressive and experimental game design themselves, or simply to play with a new and expanded mindset.

GPU Computing Gems Jade Edition, 2011-11-02 GPU Computing Gems, Jade Edition, offers hands-on, proven techniques for general purpose GPU programming based on the successful application experiences of leading researchers and developers. One of few resources available that distills the best practices of the community of CUDA programmers, this second edition contains 100% new material of interest across industry, including finance, medicine, imaging, engineering, gaming, environmental science, and green computing. It covers new tools and frameworks for productive GPU computing application development and provides immediate benefit to researchers developing improved programming environments for GPUs. Divided into five sections, this book explains how GPU execution is achieved with algorithm implementation techniques and approaches to data structure layout. More specifically, it considers three general requirements: high level of parallelism, coherent memory access by threads within warps, and coherent control flow within warps. Chapters explore topics such as accelerating database searches; how to leverage the Fermi GPU architecture to further accelerate prefix operations; and GPU implementation of hash tables. There are also discussions on the state of GPU computing in interactive physics and artificial intelligence; programming tools and techniques for GPU computing; and the edge and node parallelism approach for computing graph centrality metrics. In addition, the book proposes an alternative approach that balances computation regardless of node degree variance. Software engineers, programmers, hardware engineers, and advanced students will find this book extremely useful. This second volume of GPU Computing Gems offers 100% new material of interest across industry, including finance, medicine, imaging, engineering, gaming, environmental science, green computing, and more. Covers new tools and frameworks for productive GPU computing application development and offers immediate benefit to researchers developing improved programming environments for GPUs. Even more hands-on, proven techniques demonstrating how general purpose GPU computing is changing scientific research. Distills the best practices of the community of CUDA programmers; each chapter provides insights and ideas as well as 'hands on' skills applicable to a variety of fields.

Traveling through Video Games Tom van Nuenen, 2023-10-25 This book unlocks an understanding of video games as virtual travel. It explains how video game design increasingly takes cues from the promotional language of tourism, and how this connection raises issues of power and commodification. Bridging the disciplinary gap between game and tourism studies, the book offers a comprehensive account of touristic gazing in games such as *The Legend of Zelda: Breath of the Wild*, *Minecraft*, and *Microsoft Flight Simulator 2020*. Traveling through video games involves a mythological promise of open-ended opportunity, summarized in the slogan you can go there. Van Nuenen discusses the scale of game worlds, the elusive nature of freedom and control, and the pivotal role of work in creating a sense of belonging. The logic of tourism is fundamentally consumptive—but through design choices, players can also be invited to approach their travels more critically. This is the difference between moving through a game world, and being moved by it. This interdisciplinary and innovative study will interest students and scholars of digital media studies, game studies, tourism and technology, and the Digital Humanities.

Disruptive Technologies in Media, Arts and Design Alexiei Dingli, Alexander Pfeiffer, Alesha Serada, Mark Bugeja, Stephen Bezzina, 2022-02-28 This book presents selected proceedings from two installments of the MAD Conference in 2020—MAD Blockchain 2020 and MAD Artificial Intelligence 2020. These events focused on applications of these novel technologies in media, arts and design. A number of researchers present their own projects and practical implementations of blockchain and AI in games, art, education and sustainable living, while other authors explore theoretical and ethical questions that these technologies bring into society. First and foremost, we recommend this book to aspiring scholars and practitioners who are also building new solutions using blockchain and AI. Besides, the book extends the existing scholarship on AI and blockchain and provides proven cases and tools for education in ICT. The conference has been organized by Danube-University Krems, Drexel University Philadelphia and University of Malta with support from the MIT Education Arcade, the Texas A&M LIVE Lab and University of Vaasa.
