Exploring Color Photography Robert Hirsch,2014-12-17 Robert Hirsch's Exploring Color Photography is the thinking photographer's guide to color imagemaking. Now in its sixth edition, this pioneering text clearly and concisely instructs students and intermediate photographers in the fundamental aesthetic and technical building blocks needed to create thought-provoking digital and analog color photographs. Taking both a conceptual and pragmatic approach, the book avoids getting bogged down in complex, ever-changing technological matters, allowing it to stay fresh and engaging. Known as the Bible of Color Photography, its stimulating assignments encourage students to be adventurous and to take responsibility for learning and working independently. The emphasis on design and postmodern theoretical concepts stresses the thought process behind the creation of intriguing images. It's extensive and inspiring collection of images and accompanying captions allow makers to provide insight into how photographic methodology was utilized to visualize and communicate their objectives. The text continues to deliver inspiring leadership in the field of color photography with the latest accurate information, ideas, commentary, history, a diverse collection of contemporary images, and expanded cellphone photography coverage. A Problem Solving and Writing chapter offers methods and exercises that help one learn to be a visual problem solver and to discuss and write succinctly about the concepts at the foundation of one's work. Exploringcolorphotography.com, the companion website, has been revamped and updated to feature more student and teacher resources, including a new web-based timeline: As It Happened: A Chronological History of Color Photography.

Active Landscape Photography Anne C Godfrey,2020-01-15 Photographs play a hugely influential but largely unexamined role in the practice of landscape architecture and design. Through a diverse set of essays and case studies, this seminal text unpacks the complex relationship between landscape architecture and photography. It explores the influence of photographic seeing on the design process by presenting theoretical concepts from photography and cultural theory through the lens of landscape architecture practice to create a rigorous, open discussion. Beautifully illustrated in full color throughout, with over 200 images, subjects covered include the diversity of everyday photographic practices for design decision making, the perception of landscape architecture through photography, transcending the objective and subjective with photography, and deploying multiplicity in photographic representation as a means to better represent the complexity of the discipline. Rather than solving problems and providing tidy solutions to the ubiquitous relationship between photography and landscape architecture, this book aims to invigorate a wider dialogue about photography's influence on how landscapes are understood, valued and designed. Active photographic practices are presented throughout for professionals, academics, students and researchers.

Light and Lens Robert Hirsch,2018-03-05 The new edition of this pioneering book allows students to acquire an essential foundation for digital photography. Fully updated, it clearly and concisely covers the fundamental concepts of imagemaking, how to use digital technology to create compelling images, and how to output and preserve images in the digital world. Exploring history, methods, and theory, this text offers classroom-tested assignments and exercises from leading photographic educators, approaches for analyzing, discussing, and writing about photographs, and tools to critically explore and make images with increased visual literacy. New to this edition: New larger page format Revised and renewed to reflect technological advances Expanded coverage of smartphone/mobile photography Extended coverage of the careers section More than 100 new images

Computer Vision Richard Szeliski,2010-09-30 Computer Vision: Algorithms and Applications explores the variety of techniques commonly used to analyze and interpret images. It also describes challenging real-world applications where vision is being successfully used, both for specialized applications such as medical imaging, and for fun, consumer-level tasks such as image editing and stitching, which students can apply to their own personal photos and videos. More than just a source of "recipes," this exceptionally authoritative and comprehensive textbook/reference also takes a scientific approach to basic vision problems, formulating physical models of the imaging process before inverting them to produce descriptions of a scene. These problems are also analyzed using statistical models and solved using rigorous engineering techniques. Topics and features: structured to support active curricula and project-oriented courses, with tips in the Introduction for using the book in a variety of customized courses; presents exercises at the end of each chapter with a heavy emphasis on testing algorithms and containing numerous suggestions for small mid-term projects; provides additional material and more detailed mathematical topics in the Appendices, which cover linear algebra, numerical techniques, and Bayesian estimation theory; suggests additional reading at the end of each chapter, including the latest research in each sub-field, in addition to a full Bibliography at the end of the book; supplies supplementary course material for students at the associated website, <http://szeliski.org/Book/>. Suitable for an upper-level undergraduate or graduate-level course in computer science or engineering, this textbook focuses on basic techniques that work under real-world conditions and encourages students to push their creative boundaries. Its design and exposition also make it eminently suitable as a unique reference to the fundamental techniques and current research literature in computer vision.

Paper Pools David Hockney,1980 Paper Pools is the most recent major group of works by David Hockney, demonstrating his fascination with new techniques in the service

of his passionate pursuit of creative representation. In 1976, Hockney had become obsessed with the technique of coloured etching, which he had been taught by the French print-maker Aldo Crommelynck and which resulted in the Blue Guitar series, among other inventive works. Now Hockney has applied himself with infectious enthusiasm to the making of Paper Pools, in which painting and paper-making are totally fused. --preface.

Photography, History, Difference Tanya Sheehan, 2014-12-02 Over the past decade, historical studies of photography have embraced a variety of cultural and disciplinary approaches to the medium, while shedding light on non-Western, vernacular, and other photographic practices outside the Euro-American canon. Photography, History, Difference brings together an international group of scholars to reflect on contemporary efforts to take a different approach to photography and its histories. What are the benefits and challenges of writing a consolidated, global history of photography? How do they compare with those of producing more circumscribed regional or thematic histories? In what ways does the recent emphasis on geographic and national specificity encourage or exclude attention to other forms of difference, such as race, class, gender, and sexuality? Do studies of other photographs ultimately necessitate the adoption of nontraditional methodologies, or are there contexts in which such differentiation can be intellectually unproductive and politically suspect? The contributors to the volume explore these and other questions through historical case studies; interpretive surveys of recent historiography, criticism, and museum practices; and creative proposals to rethink the connections between photography, history, and difference. A thought-provoking collection of essays that represents new ways of thinking about photography and its histories. It will appeal to a broad readership among those interested in art history, visual culture, media studies, and social history.

Fast Forward Holly Willis, 2016-08-16 Cinema, the primary vehicle for storytelling in the twentieth century, is being reconfigured by new media in the twenty-first. Terms such as worldbuilding, virtual reality, and transmedia introduce new methods for constructing a screenplay and experiencing and sharing a story. Similarly, 3D cinematography, hypercinema, and visual effects require different modes for composing an image, and virtual technology, motion capture, and previsualization completely rearrange the traditional flow of cinematic production. What does this mean for telling stories? Fast Forward answers this question by investigating a full range of contemporary creative practices dedicated to the future of mediated storytelling and by connecting with a new generation of filmmakers, screenwriters, technologists, media artists, and designers to discover how they work now, and toward what end. From Chris Milk and Aaron Koblin's exploration of VR spherical filmmaking to Rebeca Méndez's projection and installation work exploring climate change to the richly mediated interactive live performances of the collective Cloud Eye Control, this volume captures a moment of creative evolution and sets the stage for imagining the future of the cinematic arts.
