Computer Aided Systems Theory - EUROCAST '89 Franz Pichler,Roberto Moreno-Diaz,1990-02-07 Nonlinear Evolution Equations and Dynamical Systems (NEEDS) provides a presentation of the state of the art. Except for a few review papers, the 40 contributions are intentionally brief to give only the gist of the methods, proofs, etc. including references to the relevant literature. This gives a handy overview of current research activities. Hence, the book should be equally useful to the senior researcher as well as the colleague just entering the field. Keypoints treated are: i) integrable systems in multidimensions and associated phenomenology ('dromions'); ii) criteria and tests of integrability (e.g., Painlevé test); iii) new developments related to the scattering transform; iv) algebraic approaches to integrable systems and Hamiltonian theory (e.g., connections with Young-Baxter equations and Kac-Moody algebras); v) new developments in mappings and cellular automata, vi) applications to general relativity, condensed matter physics, and oceanography.

The Craft of Text Editing Craig A. Finseth,2012-12-06 Never before has a book been published that describes the techniques and technology used in writing text editors, word processors and other software. Written for the working professional and serious student, this book covers all aspects of the task. The topics range from user psychology to selecting a language to implementing redisplay to designing the command set. More than just facts are involved, however, as this book also promotes insight into an understanding of the issues encountered when designing such software. After reading this book, you should have a clear understanding of how to go about writing text editing or word processing software. In addition, this book introduces the concepts and power of the Emacs-type of text editor. This type of editor can trace its roots to the first computer text editor written and is still by far the most powerful editor available.

Visual Programming Nan C. Shu,1988 This pioneering guide shows how to use graphics to program computers, train programmers, enhance human-computer communications and improve productivity. Visual Programming is sure to be a welcome title for computer book consumers.

The Software Factory Challenge Herbert Weber,1997 The Eureka Software Factory project (ESF) was set up by a Group of European partners in 1987. Its objective was broadly to improve the large-scale software production process by introducing an industrialised approach to have The Software Factory Challenge social, organisational and technical aspects. The project was set up under the pan-European Eureka programme, and it was funded by the partners together with their national governments. This book is not a history of the ESF project, but rather a presentation of its main ideas and achievements, and an account of how the concepts pioneered by the project have become part of a general movement in both the industrial and academic domains. In this movement, the facility for the production, use and maintenance of large-scale computer artefacts (the Software Factory) is treated in a wide and 'organic' way, so as to include concepts such as business value and process improvement; with the development of new technologies being driven by these new, wide requirements. This new approach is in contrast with a narrowly technological one, in which individual tasks like programming are aided by machines but in which the production process as a whole is not supported. The main body of the book is divided into four Parts. Part I gives a short overview of the ESF project and its ideas, and goes on to attempt to place the ESF work in the context of industry as a whole (with reference to both producers and users of Information Technology systems). Part II sets out to explain the technological basis of the Software Factory as seen by ESF and goes on to describe some experimental and pioneering implementations of Factory Support Environments and their constituents. Part III is devoted to the most complete implementation of an ESF Factory Support Environment to date, Kernel/2r. This Section provides a highly detailed discussion of both design and implementation issues. In Part IV addresses what deployment strategies are now available to continue the spread of these ideas in order to meet the goal of better software-based systems (i.e. systems which are safer, more economical to build, more easily changed and more useful than those that have been built up to now). Finally, a Glossary of Terms and a list of References is given. Readers: those who have a professional interest in Information Technology.

Elegant Debts Craig Clunas,2004-06-30 This book takes an innovative approach to one of the great figures of Chinese culture, the writer and painter Wen Zhengming (1470-1559). Renowned as one of the great "scholar painters" of the Ming dynasty, Wen was enmeshed in a complex web of social obligations, his "elegant debts" as he called them, which led to many of his most celebrated works. Using an unprecedented quantity of primary sources for his life and work, *Elegant Debts* looks at the ways in which social obligation and gift exchange were central to personal and individual identity in the Ming period. The book also examines Wen's family relationships, his friends, mentors, and pupils, his sense of a distinct local identity, and the interplay of national and regional politics with the achievements of his long life. It uses the insights of a range of scholarship—art history, social and literary history, and anthropology—to show how "self" was constructed in Ming China. In doing so, it makes a major contribution toward a more diverse art history that is less dependent on European conceptions of artists and their work. Craig Clunas has published extensively in the field, and is widely recognized as one of the world's leading scholars of Ming culture. Featuring many images of the work of one of China's major painters, this book is accessible to all who are interested in China's culture and history, as well as to students and scholars of art history and the history of culture.

The Built Surface: v. 1: Architecture and the Visual Arts from Antiquity to the Enlightenment Christy Anderson,Karen Koehler,2017-11-22 This title was first published in 2002: Since antiquity through to the present, architecture and the pictorial arts (paintings, photography, graphic arts) have not been rigidly separated but interrelated - the one informing the other, and establishing patterns of creation and reception. In the Classical tradition the education of the architect and artist has always stressed this relationship between the arts, although modern scholarship has too often treated them as separate disciplines. These volumes explore the history of this exchange between the arts as it emerged from classical theory into artistic and architectural practice. Issues of visual representation, perspective, allegory, site specificity, ornamentation, popular culture, memorials, urban and utopian planning, and the role of treatises, manifestos, and other theoretical writings are addressed, as well as the critical reaction to these products and practices. This title represents a variety of methods, approaches, and dialectical interpretations - cases where architecture informs the themes and physical space of pictures, or pictorial concerns inform the design and construction of the built environment. The exchanges between architecture and pictures explored by these authors are found to be in all cases ideologically potent, and therefore significantly expressive of their respective social, political, and intellectual histories.

The Impact of CASE Technology on Software Processes Daniel Cooke,1994 This review volume consists of articles concerning CASE technology and research as discussed from two perspectives.For the most part, the available CASE technology is intended to automate certain phases of the software development life cycle. The book contains articles which focus on how the current technology alters the nature of software engineering efforts. Papers which delve into the knowledge a software engineer needs to possess and how the software engineer's work content has or may change are included. Cultural as well as technical considerations are discussed.The current CASE technology exists to automate phases of the software development life cycle, thus affecting software development in the short term, but we cannot ignore the CASE research efforts toward a

higher generation language. Such a language should affect software development in the long term. Papers suggesting how these languages may alter the nature of software engineering in the future are presented.

"I Don't Translate, I Create!" An On-line Survey on Uniformity Versus Creativity in Professional Translations Vanessa Drexler,2016-07 "I don't translate, I create!" – This is the slogan of a translation agency called "Sternkopf Communications" located in Flöha, Germany. The translators at this translation agency are specialized in the field of marketing and perceive creativeness their daily bread. But what does this actually mean – I don't translate, I create? Undoubtedly, the translation of a text from one language into another is not an easy and straightforward process. On the contrary, the translator needs to invest much time and one or the other headache before a target text (TT) finally sounds natural, fluent, coherent and logical for the target audience. Different possible translation solutions will have to be considered, language as well as culture-related equivalents often are not easily at hand etc. Would it not be pleasant if machine translation (MT) was there to help with this process? Nevertheless, as promising as this may sound, no machine or software developed so far is able to independently produce TTs meeting the standards of marketable translations, despite copious efforts to do so. This just goes to show how important the human capacity of creativity in language and text production is for the translation process. Without human creative thinking, TTs would, in fact, truly only read like translations, i.e. mechanical reproductions of the source text (ST) in a different code, rather than natural texts in their own right. Good translations, however, distinguish themselves by not revealing their readership that they are "merely" renderings of the original text. Hence, a slogan such as "I don't translate, I create", emphasizes the effort that is put into the translation process quite well, making the customers of Sternkopf Communications instantly aware of the fact that their texts are in good hands and will eventually not read like mechanical translations but as if they were well-composed originals. Yet, despite the enormous importance of creativity in translating, computer-aided translation (CAT) tools are being used frequently by professional translators, not to replace but to support the translator in their daily business. From the 1990s onwards, using CAT tools has been becoming increasingly popular for the following reason: They are said to help translators to achieve faster turnaround times by storing completed translations in a translation memory TM. In so doing, CAT tools enable their users to translate in a more consistent way, since they search source texts for words, phrases or sentences that have already been translated before and stored in the TM so that the translator does not need to translate this text unit again 'from scratch'. Accordingly, this paper pursues two related purposes. The first is to compare the different CAT tools in their degree of usability to gain an impression of which of these translation memory solutions is perceived to meet translators' technological requirements best. The second purpose is to identify translators' perspectives on uniformity and creativity in translations with the goal to shedding light on the question whether CAT tools generally tend to positively or negatively influence the translation process on a rather linguistic than technological basis.
