**Multimodal Trip Planner System Final Evaluation Report** Lee Biernbaum, Lydia Rainville, U.S. Department of Transportation, Arlen Spiro, 2011-05-31 This evaluation of the Multimodal Trip Planning System (MMTPS) is the culmination of a multi-year project evaluating the development and deployment of a multimodal trip planner in the Chicago land area between 2004 and 2010. The report includes an overview of this project, the state of the current trip planning environment, and a discussion of technical and institutional issues. The primary purpose of this evaluation was gathering information to share with the transit community and other stakeholders on these technical and institutional issues including Intelligent Transportation System (ITS) standards, communication, marketing, and the technical feasibility of integrating single-mode trip planning. The report concludes with lessons learned and recommendations related to the development of a door-to-door, multimodal trip planner system.

**Ubiquitous Computing Fundamentals** John Krumm, 2018-10-08 ...a must-read text that provides a historical lens to see how ubicomp has matured into a multidisciplinary endeavor. It will be an essential reference to researchers and those who want to learn more about this evolving field. -From the Foreword, Professor Gregory D. Abowd, Georgia Institute of Technology First introduced two decades ago, the term ubiquitous computing is now part of the common vernacular. Ubicomp, as it is commonly called, has grown not just quickly but broadly so as to encompass a wealth of concepts and technology that serves any number of purposes across all of human endeavor. While such growth is positive, the newest generation of ubicomp practitioners and researchers, isolated to specific tasks, are in danger of losing their sense of history and the broader perspective that has been so essential to the field's creativity and brilliance. Under the guidance of John Krumm, an original ubicomp pioneer, Ubiquitous Computing Fundamentals brings together eleven ubiquitous computing trailblazers who each report on his or her area of expertise. Starting with a historical introduction, the book moves on to summarize a number of self-contained topics. Taking a decidedly human perspective, the book includes discussion on how to observe people in their natural environments and evaluate the critical points where ubiquitous computing technologies can improve their lives. Among a range of topics this book examines: How to build an infrastructure that supports ubiquitous computing applications Privacy protection in systems that connect personal devices and personal information Moving from the graphical to the ubiquitous

computing user interface Techniques that are revolutionizing the way we determine a person's location and understand other sensor measurements While we needn't become expert in every sub-discipline of ubicomp, it is necessary that we appreciate all the perspectives that make up the field and understand how our work can influence and be influenced by those perspectives. This is important, if we are to encourage future generations to be as successfully innovative as the field's originators.

**Lonely Planet Japan** Lonely Planet, Rebecca Milner, Ray Bartlett, Andrew Bender, Craig McLachlan, Kate Morgan, Simon Richmond, Tom Spurling, Benedict Walker, Wendy Yanagihara, Phillip Tang, 2017-08-01 Lonely Planet Japan is your passport to the most relevant, up-to-date advice on what to see and skip, and what hidden discoveries await you. Explore a bamboo grove in Arashiyama, marvel at Shinto and Buddhist architecture in Kyoto, or relax in the hot springs of Noboribetsu Onsen; all with your trusted travel companion.

**Wabi Sabi** Beth Kempton, 2019-04-09 The definitive guide that teaches you how to use the Japanese concept of wabi sabi to reshape every area of your life and find happiness right where you are. Fed up with the exhausting challenges of our fast-paced, consumption-driven existence, millions of people around the world are turning to timeless cultural traditions to find true meaning. In this transformative handbook, Beth Kempton introduces you to wabi sabi ("wah-bi sah-bi"), a captivating concept from Japanese aesthetics that offers a whole new way of looking at the world. With roots in Zen and the Way of Tea, wabi sabi teaches you to see beauty in imperfection, appreciate simplicity, and accept the transient nature of all things. It inspires you to simplify everything and concentrate on what truly matters. Filled with simple yet profound wisdom, Wabi Sabi will help you slow down, reconnect with nature, and be gentler on yourself. From honoring the rhythm of the seasons to creating a welcoming home, from reframing failure to aging with grace, Wabi Sabi teaches you find more joy and inspiration throughout your perfectly imperfect life.

How to Not Look Like a Tourist Alyse The Invisible Tourist, 2021-08-30 Overcrowding. Lengthy queues. Increasing animosity from locals. Loss of authenticity. Disappointment. As tourists, how can we improve tourism for locals, their communities, their culture and the environment - as well as for ourselves? By taking steps to be invisible, of course! Unbeknownst to most tourists, there is a hidden power within them. This handbook examines the lesser-known problems with overtourism, how they came to be and details practical solutions to help you unlock this power to use as a force for good. Packed with everything you need to know to tailor your own invisibility cloak, you'll learn how to: Plan a stress-free trip every time & ways to reduce disappointment; Enjoy popular destinations without contributing to overcrowding; Feel fulfilled by personal, authentic encounters with locals whilst helping their businesses; Avoid pickpockets & scammers for a safe travel experience; Preserve local cultures & identities instead of diluting them; Protect attractions of significant cultural heritage & the natural environment. Learn how to make the most of your next travel experience by blending in!

A History of Writing in Japan Christopher Seeley, 2023-11-20 This book deals chronologically with the history of writing in Japan, a subject which spans a period of 2,000 years, beginning with the transmission of writing from China in about the first or second century AD, and concluding with the use of written Japanese with computers. Topics dealt with include the adoption of Chinese writing and its subsequent adaptation in Japan, forms of writing employed in works such as the Kojiki and Man'yōshū, development of the kana syllabaries, evolution of mixed character-kana orthography, historical kana usage, the rise of literacy during the Edo period, and the main changes that have taken place in written Japanese in the modern period (ca. 1868 onwards). This is the first full-length work in a European language to provide the Western reader with an overall account of the subject concerned, based on extensive examination of both primary and secondary materials.

**Cognitive Mapping** Scott Freundsuh, NATIONAL UNIV OF IRELAND, 2018-10-24 This important work brings together international academics from a variety of disciplines to explore the topic of spatial cognition on a 'geographic' scale. It provides an overview of the historical origins of the subject, a description of current debates and suggests directions for future research.

**3D Geo-Information Sciences** Jiyeong Lee, Siyka Zlatanova, 2008-10-24 In recent years 3D geo-information has become an important research area due to the increased complexity of tasks in many geo-scientific applications, such as sustainable urban planning and development, civil engineering, risk and disaster management and environmental monitoring. Moreover, a paradigm of cross-application merging and integrating of 3D data is observed. The problems and challenges facing today's 3D software, generally application-oriented, focus almost exclusively on 3D data transportability issues - the ability to use data originally developed in one modelling/visualisation system in other and vice versa. Tools for elaborated 3D analysis, simulation and prediction are either missing or, when available, dedicated to specific tasks. In order to respond to this increased demand, a new type of system has to be developed. A fully developed 3D geo-information system should be able to manage 3D geometry and topology, to integrate 3D geometry and thematic information, to analyze both spatial and topological relationships, and to present the data in a suitable form. In addition to the simple geometry types like point line and polygon, a large variety of parametric representations, freeform curves and surfaces or sweep shapes have to be supported. Approaches for seamless conversion between 3D raster and 3D vector representations should be available, they should allow analysis of a representation most suitable for a specific application.

*Smart Phone and Next Generation Mobile Computing* Pei Zheng, Lionel Ni, 2010-07-19 This in-depth technical guide is an essential resource for anyone involved in the development of "smart mobile wireless technology, including devices, infrastructure, and applications. Written by researchers active in both academic and industry settings, it offers both a big-picture introduction to the topic and detailed insights into the technical details underlying all of the key trends. Smart Phone and Next-Generation Mobile Computing shows you how the field has evolved, its real and potential current capabilities, and the issues affecting its future direction. It lays a solid foundation for the decisions you face in your work, whether you're a manager, engineer, designer, or entrepreneur. Covers the convergence of phone and PDA functionality on the terminal side, and the integration of different network types on the infrastructure side Compares existing and anticipated wireless technologies, focusing on 3G cellular networks and wireless LANs Evaluates terminal-side operating systems/programming environments, including Microsoft Windows Mobile, Palm OS, Symbian, J2ME, and Linux Considers the limitations of existing terminal designs and several pressing application design issues Explores challenges and possible solutions relating to the next phase of smart phone development, as it relates to services, devices, and networks Surveys a collection of promising applications, in areas ranging from gaming to law enforcement to financial processing

**Location Based Services and TeleCartography** Georg Gartner, William Cartwright, Michael P Peterson, 2007-04-27 This book provides for the first time a general overview of research activities related to location and map-based services. These activities have emerged over the last years, especially around issues of positioning, spatial modelling, cartographic communication as well as in the fields of ubiquitous cartography, geo-pervasive services, user-centered modelling and geo-wiki activities. The innovative and contemporary character of these topics has lead to a

great variety of interdisciplinary contributions, from academia to business, from computer science to geodesy. Topics cover an enormous range with heterogenous relationships to the main book issues. Whilst contemporary cartography aims at looking at new and efficient ways for communicating spatial information the development and availability of technologies like mobile networking, mobile devices or short-range sensors lead to interesting new possibilities for achieving this aim. By trying to make use of available technologies, cartography and a variety of related disciplines look specifically at user-centered and conte- aware system development, as well as new forms of supporting wayfinding and navigation systems. Contributions are provided in five main sections and they cover all of these aspects and give a picture of the new and expanding field of Location Based Services and TeleCartography. Privacy in Ubiquitous Computing Marc Langheinrich,2014-12-01 Written by a renowned author with more than 2,300 citations in Google Scholar, this book illustrates the challenges that ubicomp poses to our privacy. It outlines social, technical, and legal tools for coping with the ever-increasing digitalization of everyday life. The text provides rich background information on the social and legal constructs that surround privacy and data protection and offers a comprehensive overview of the various technical approaches used to give privacy and data protection in application areas, such as RED and location privacy.

Cartography Menno-Jan Kraak,F.J. Ormeling,2013-11-05 This revised and updated edition integrates the latest in modern technology with traditional cartographic principles. While providing a solid conceptual foundation in cartographic methodology, the text also introduces the very latest advances that have greatly influenced cartographic techniques. The new edition reflects the increasing importance of cartography as the basis for further geographical study, the text has been updated throughout and chapters on the latest developments in cartography have been integrated. There is also a more widespread emphasis on multimedia and the web.

*GeoSensor Networks* Silvia Nittel,Alexandros Labrinidis,Anthony Stefanidis,2008-08-15 This volume serves as the post-conference proceedings for the Second GeoSensor Networks Conference that was held in Boston, Massachusetts in October 2006. The conference addressed issues related to the collection, management, processing, ana- sis, and delivery of real-time geospatial data using distributed geosensor networks. This represents an evolution of the traditional static and centralized geocomputational paradigm, to support the collection of both temporally and spatially high-resolution, up-to-date data over a broad geographic area, and to use sensor networks as actuators in geographic space. Sensors in these environments can be static or mobile, and can be used to passively collect information about the environment or, eventually, to actively influence it. The research challenges behind this novel paradigm extend the frontiers of tra- tional GIS research further into computer science, addressing issues like data stream processing, mobile computing, location-based services, temporal-spatial queries over geosensor networks, adaptable middleware, sensor data integration and mining, au- mated updating of geospatial databases, VR modeling, and computer vision. In order to address these topics, the GSN 2006 conference brought together leading experts in these fields, and provided a three-day forum to present papers and exchange ideas.

**Hokkaido Highway Blues** Will Ferguson,2003 It had never been done before. Not in 4000 years of Japanese recorded history had anyone followed the Cherry Blossom Front from one end of the country to the other. Nor had anyone hitchhiked the length of Japan. But, heady on sakura and sake, Will Ferguson bet he could do both. The resulting travelogue is one of the funniest and most illuminating books ever written about Japan. And, as Ferguson learns, it illustrates that to travel is better than to arrive.

**Untangling My Chopsticks** Victoria Abbott Riccardi,2008-12-18 Two years out of college and with a degree from Le Cordon Bleu in Paris, Victoria Riccardi left a boyfriend, a rent-controlled New York City apartment, and a plum job in advertising to move to Kyoto to study kaiseki, the exquisitely refined form of cooking that accompanies the formal Japanese tea ceremony. She arrived in Kyoto, a city she had dreamed about but never seen, with two bags, an open-ended plane ticket, and the ability to speak only sushi-bar Japanese. She left a year later, having learned the language, the art of kaiseki, and what was truly important to her. Through special introductions and personal favors, Victoria was able to attend one of Kyoto’s most prestigious tea schools, where this ago-old Japanese art has been preserved for generations and where she was taken under the wing of an American expatriate who became her mentor in the highly choreographed rituals of this extraordinary culinary discipline. During her year in Kyoto, Victoria explored the mysterious and rarefied world of tea kaiseki, living a life inaccessible to most foreigners. She also discovered the beguiling realm of modern-day Japanese food—the restaurants, specialty shops, and supermarkets. She participated in many fast-disappearing culinary customs, including making mochi (chewy rice cakes) by hand, a beloved family ritual barely surviving in a mechanized age. She celebrated the annual cleansing rites of New Year’s, donning an elaborate kimono and obi for a thirty-four-course extravaganza. She includes twenty-five recipes for favorite dishes she encountered, such as Chicken and Egg Rice Bowl, Japanese Beef and Vegetable Hotpot, and Green-Tea Cooked Salmon Over Rice. Untangling My Chopsticks is a sumptuous journey into the tastes, traditions, and exotic undercurrents of Japan. It is also a coming-of-age tale steeped in history and ancient customs, a thoughtful meditation on life, love, and learning in another land.
