*The Mirror of Public Opinion?* Anne-Dörte Balks, 2016 Central to the study is the relevance of media actors as actors in civil society for the European integration process. This relevance is empirically assessed, making use of a selection of print media from two founding members of the European Union, Germany and the Netherlands, analysing the path-dependency of journalistic coverage and reporting along two questions: Is the focus on and evaluation of the 'European Project' and its different aspects in Germany and the Netherlands alike, or does it differ? How do traditional political and societal perspectives affect opinion formation in the media? The country comparison draws on the neo-institutional school of thought. The large corpus of newspaper content (articles and commentary) has been assessed quantitatively as well as qualitatively searching for major issues, motives, and discourses in temporal perspective. The last major treaties of the European integration process, the so called Constitutional Treaty and Reform Treaty, serve as temporal starting and endpoint for analysis. Anne-Dörte Balks, M.A./M.Sc., studied European Studies (focus: political science) at the University of Osnabrück, Westfälische Wilhelms-Universität Münster, and the University of Twente (Enschede, NL). Her research interest is on the discourse on European integration in European societies and media. She currently works as Personal Assistant to the Vice President International at Freie Universität Berlin.

**Wind Power Technology** Alois Peter Schaffarczyk, 2023-06-16 This textbook provides in-depth treatment of all systems associated with wind energy, including the aerodynamic and structural aspects of blade design, the flow of energy and loads through the wind turbine, the electrical components and power electronics including control systems. It explains the importance of wind resource assessment techniques, site evaluation and ecology and describes the integration of wind farms into the electrical grid. The reader will also become familiar with the offshore technology, the youngest and most promising aspect of wind energy. The completely revised and updated new edition provides new sections on fatigue design, analytical models for structural analysis and topology optimization. The book is written by experts in research, teaching and industry. It conveys the importance of wind energy in the international energy policy debate and offers clear insight into the subject for all students learning about wind engineering. Problems with solutions are perfect for self-study. It is also an authoritative resource for engineers designing and developing wind energy systems, energy policy-makers and economists in the renewable energy sector. The translation of

some chapters was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content.
