Data Warehouse Systems Alejandro Vaisman, Esteban Zimányi, 2014-09-10 With this textbook, Vaisman and Zimányi deliver excellent coverage of data warehousing and business intelligence technologies ranging from the most basic principles to recent findings and applications. To this end, their work is structured into three parts. Part I describes “Fundamental Concepts” including multi-dimensional models; conceptual and logical data warehouse design and MDX and SQL/OLAP. Subsequently, Part II details “Implementation and Deployment,” which includes physical data warehouse design; data extraction, transformation, and loading (ETL) and data analytics. Lastly, Part III covers “Advanced Topics” such as spatial data warehouses; trajectory data warehouses; semantic technologies in data warehouses and novel technologies like Map Reduce, column-store databases and in-memory databases. As a key characteristic of the book, most of the topics are presented and illustrated using application tools. Specifically, a case study based on the well-known Northwind database illustrates how the concepts presented in the book can be implemented using Microsoft Analysis Services and Pentaho Business Analytics. All chapters are summarized using review questions and exercises to support comprehensive student learning. Supplemental material to assist instructors using this book as a course text is available at <http://cs.ulb.ac.be/DWSDIbook/>, including electronic versions of the figures, solutions to all exercises, and a set of slides accompanying each chapter. Overall, students, practitioners and researchers alike will find this book the most comprehensive reference work on data warehouses, with key topics described in a clear and educational style.

Graph-Powered Machine Learning Alessandro

Nego,2021-09-28 At its core, machine learning is about efficiently identifying patterns and relationships in data. Many tasks, such as finding associations among terms so you can make accurate search recommendations or locating individuals within a social network who have similar interests, are naturally expressed as graphs. Graph-Powered Machine Learning introduces you to graph technology concepts, highlighting the role of graphs in machine learning and big data platforms. You'll get an in-depth look at techniques including data source modeling, algorithm design, link analysis, classification, and clustering. As you master the core concepts, you'll explore three end-to-end projects that illustrate architectures, best design practices, optimization approaches, and common pitfalls. Key Features · The lifecycle of a machine learning project · Three end-to-end applications · Graphs in big data platforms · Data source modeling · Natural language processing, recommendations, and relevant search · Optimization methods Readers comfortable with machine learning basics. About the technology By organizing and analyzing your data as graphs, your applications work more

fluidly with graph-centric algorithms like nearest neighbor or page rank where it's important to quickly identify and exploit relevant relationships. Modern graph data stores, like Neo4j or Amazon Neptune, are readily available tools that support graph-powered machine learning. Alessandro Negro is a Chief Scientist at GraphAware. With extensive experience in software development, software architecture, and data management, he has been a speaker at many conferences, such as Java One, Oracle Open World, and Graph Connect. He holds a Ph.D. in Computer Science and has authored several publications on graph-based machine learning.

Big Data with Hadoop MapReduce Rathinaraja Jeyaraj, Ganeshkumar Pugalendhi, Anand Paul, 2020-05-01
The authors provide an understanding of big data and MapReduce by clearly presenting the basic terminologies

and concepts. They have employed over 100 illustrations and many worked-out examples to convey the concepts and methods used in big data, the inner workings of MapReduce, and single node/multi-node installation on physical/virtual machines. This book covers almost all the necessary information on Hadoop MapReduce for most online certification exams. Upon completing this book, readers will find it easy to understand other big data processing tools such as Spark, Storm, etc. Ultimately, readers will be able to:

- understand what big data is and the factors that are involved
- understand the inner workings of MapReduce, which is essential for certification exams
- learn the features and weaknesses of MapReduce
- set up Hadoop clusters with 100s of physical/virtual machines
- create a virtual machine in AWS
- write MapReduce with Eclipse in a simple way
- understand other big data processing tools and their applications

Web Data Management Serge Abiteboul,Ioana Manolescu,Philippe Rigaux,Marie-Christine Rousset,Pierre

Senellart,2011-11-28 The Internet and World Wide Web have revolutionized access to information. Users now store information across multiple platforms from personal computers to smartphones and websites. As a consequence, data management concepts, methods and techniques are increasingly focused on distribution concerns. Now that information largely resides in the network, so do the tools that process this information. This book explains the foundations of XML with a focus on data distribution. It covers the many facets of distributed data management on the Web, such as description logics, that are already emerging in today's data integration applications and herald tomorrow's semantic Web. It also introduces the machinery used to manipulate the unprecedented amount of data collected on the Web. Several 'Putting into Practice' chapters describe detailed practical applications of the technologies and techniques. The book will serve as an introduction to the new, global, information systems for Web professionals and master's level courses.

Writing and Language Learning Rosa M.

Manchón,2020-11-15 The current volume aspires to add to previous research on the connection between writing and language learning from a dual perspective: It seeks to reflect current progress in the domain as well as to foster future developments in theory and research. The theoretical postulations contained in Part I identify and expand in novel ways the diverse lenses through which the varied, multi-faceted dimensions of the connection between writing and language learning can be explored. The methodological reflections put forward in Part III signal theoretically-grounded and pedagogically-relevant paths along which future empirical work can grow. The empirical studies reported in Part II illuminate the myriad of individual,

educational, and task-related variables that (may) mediate short-term and long-term language learning outcomes. These studies examine diverse forms of writing, performed in varied environments (including pen-and-paper and digital writing), conditions (writing individually and/or collaboratively), and instructional settings (academic settings – including secondary school and college level institutions – as well as out-of-school contexts).

Life Lived Wild Rick Ridgeway, 2021-10-26 At the beginning of his memoir *Life Lived Wild, Adventures at the Edge of the Map*, Rick Ridgeway tells us that if you add up all his many expeditions, he's spent over five years of his life sleeping in tents: "And most of that in small tents pitched in the world's most remote regions." It's not a boast so much as an explanation. Whether at elevation or raising a family back at sea level, those years taught him, he writes, "to distinguish matters of consequence from matters of inconsequence." He leaves it to his readers, though, to do the final sort of which is which.--Amazon.

Language, Memory, and Thought John R. Anderson, 2013-05-13 Published in 1976, *Language, Memory, and thought* is a valuable contribution to the field of Cognitive Psychology. This book presents a theory about human cognitive functioning, a set of experiments testing that theory, and a review of some of the literature relevant to the theory. The theory is embodied in a computer simulation model called ACT.
