Surveying Climate-Relevant Behavior Markus Hadler, Beate Klösch, Stephan Schwarzing, Markus Schweighart, Rebecca Wardana, David Neil Bird, 2021-11-12 This open access book discusses the contribution of sociology and survey research to climate research. The authors address the questions of which behaviors are of climate relevance, who is engaging in these behaviors, in which contexts do these behaviors occur, and which individual perceptions and values are related to them. Utilizing survey research, the book focuses on the measurement of climate-relevant behaviors with population surveys and develops an instrument that allows a valid estimate of an individual's GHG emissions with a few core items. While the development of these instruments was based on surveys and qualitative interviews conducted in Austria, the instruments were subsequently tested in a set of 31 European countries, revealing the international relevance of such research. The book also concludes with a brief consideration of the effects of the COVID-19 crisis on environmental attitudes, situating the project globally.

Using Surveys to Value Public Goods Robert Cameron Mitchell, Richard T. Carson, 1989 Provides decision makers, policy analysts, and social scientists, with a detailed discussion of a new techniques for the valuation of goods not traded in private markets.

Survey of the emergence and use of naturally occurring materials Oberender, Anke, Juel Lyng, Rikke, Lyngfelt Molander, Lise, Jensen, Carl, Schouenborg, Björn, Theorin, Mikael, Wærner, Eirik Rudi, Røgeberg, Marthe, Punkkinen, Henna, Wahlström, Margareta, 2021-09-10 Available online: <https://pub.norden.org/temanord2021-535/> Naturally occurring materials, such as soil, mineral masses and rock masses from construction projects and infrastructure projects represent a high resource potential and potential for CO₂-savings if used more efficiently. Large amounts of these materials are managed on an annual basis in the Nordic countries, but to enable a more resource efficient management of naturally occurring materials, several regulatory as well as practical challenges must be solved. Existing legislation in the Nordic countries is not a direct barrier that prevents optimal utilization of resources, but there are several untapped opportunities in regulation as well as problem areas that appear as barriers in practice. Efficient utilization of naturally occurring materials in the Nordic countries faces also a wide range of challenges in practice and from different angles.

Rembrandt's Money Bob Wessels, 2021 Rembrandt's Money, The legal and financial life of an artist-entrepreneur in 17th century Holland' offers a comprehensive overview of the legal and financial aspects of the life and work of Rembrandt (1606-1669). This topic has rarely been the subject of systematic legal-historical research. The author is the first to investigate the financial and legal aspects of Rembrandt's life, including the many legal disputes and conflicts which have occurred or have surrounded him during the larger part of over forty years of his private and professional life. These concern his private life as well as his work as an artist ? from a young master in Leiden in the mid-1620s, to a celebrated entrepreneur in the third and fourth decades of 17th century Amsterdam, culminating in financial distress in the latter part of his life. Along the way, the book also sheds light on on the socio-economic, cultural and historical context of the period covered and the environments (citizenry of Amsterdam, complex religious circles, business network) Rembrandt interacted with. The reader will reach a deeper understanding of the local and social Amsterdam history and a part of its local legal system--éd.

Pervaporation, Vapour Permeation and Membrane Distillation Angelo Basile, Alberto Figoli, Mohamed Khayet, 2015-02-07 Vapour permeation and membrane distillation are two emerging membrane technologies for the production of vapour as permeate, which, in addition to well-established pervaporation technology, are of increasing interest to academia and industry. As efficient separation and concentration processes, they have high potential for use in the energy, water, chemical, food and pharmaceutical sectors. Part One begins by covering the fundamentals, preparation and characterization of pervaporation, before going on to outline the associated systems and applications. State of the art uses, future trends and next generation pervaporation are then discussed. Part Two then explores the preparation, characterization, systems and applications of membranes for vapour permeation, followed by modelling and the new generation of vapour permeation membranes. Finally, Part Three outlines the fundamentals of membrane distillation and its applications in integrated systems, before the book concludes with a view of the next generation. Explores three emerging membrane technologies that produce vapour as a permeate. Looks at the fundamentals, applications, state of the art uses and next generation of each technology. Provides an authoritative guide for chemical engineers and academic researchers interested in membrane technologies for desalination, process water/steam treatment, water purification, VOCs removal and other aspects of pollution control, industrial process chemistry, renewable energy production or separation and concentration in the food/pharmaceutical industries.

Separation and Purification Technologies in Biorefineries Shri Ramaswamy, Hua-Jiang Huang, Bandaru V. Ramarao, 2013-02-04 Separation and purification processes play a critical role in biorefineries and their optimal selection, design and operation to maximise product yields and improve overall process efficiency. Separations and purifications are necessary for upstream processes as well as in maximising and improving product recovery in downstream processes. These processes account for a significant fraction of the total capital and operating costs and also are highly energy intensive. Consequently, a better understanding of separation and purification processes, current and possible alternative and novel advanced methods is essential for achieving the overall techno-economic feasibility and commercial success of sustainable biorefineries. This book presents a comprehensive overview focused specifically on the present state, future challenges and opportunities for separation and purification methods and technologies in biorefineries. Topics covered include: Equilibrium Separations: Distillation, liquid-liquid extraction and supercritical fluid extraction. Affinity-Based Separations: Adsorption, ion exchange, and simulated moving bed technologies. Membrane Based Separations: Microfiltration, ultrafiltration and diafiltration, nanofiltration, membrane pervaporation, and membrane distillation. Solid-liquid Separations: Conventional filtration and solid-liquid extraction. Hybrid/Integrated Reaction-Separation Systems: Membrane bioreactors, extractive fermentation, reactive distillation and reactive absorption. For each of these processes, the fundamental principles and design aspects are presented, followed by a detailed discussion and specific examples of applications in biorefineries. Each chapter also considers the market needs, industrial challenges, future opportunities, and economic importance of the separation and purification methods. The book concludes with a series of detailed case studies including cellulosic bioethanol production, extraction of algae oil from microalgae, and production of biopolymers. Separation and Purification Technologies in Biorefineries is an essential resource for scientists and engineers, as well as researchers and academics working in the broader conventional and emerging bio-based products industry, including biomaterials, biochemicals, biofuels and bioenergy.

Steel and Its Heat Treatment Karl-Erik Thelning, 2013-10-22 Steel and its Heat Treatment: Bofors Handbook describes the fundamental metallographic concepts, materials testing, hardenability, heat treatment, and dimensional changes that occur during the hardening and tempering stages of steel. The book explains the boundaries separating the grain contents of steel, which are the low-angle grain boundaries, the high-angle grain boundaries, and the twinning boundaries. Engineers can determine the hardenability of steel through the Grossman test or the Jominy End-Quench test. Special hardening and tempering methods are employed for steel that are going to be fabricated into tools. The different methods of hardening are manual hardening for a small surface (the tip of a screw); spin hardening for objects with a rotational symmetry (gears with 5 modules or less); and progressive hardening (or a combination with spin hardening) for flat surfaces. The hardening and tempering processes cause changes in size and shape of the substance. The text presents examples of dimensional changes during the hardening and tempering of tool steels such as those occurring in plain-carbon steels and low-alloy steels. The book is a source of reliable information needed by engineers, tool and small equipment designers, as well as by metallurgists, structural, and mechanical engineers.

Steel Heat Treatment George E. Totten, 2006-09-28 One of two self-contained volumes belonging to the newly revised Steel Heat Treatment Handbook, Second Edition, this book examines the behavior and processes involved in modern steel heat treatment applications. Steel Heat Treatment: Metallurgy and Technologies presents the principles that form the basis of heat treatment processes while incorporating detailed descriptions of advances emerging since the 1997 publication of the first edition. Revised, updated, and expanded, this book ensures up-to-date and thorough discussions of how specific heat treatment processes and different alloy elements affect the structure and the classification and mechanisms of steel transformation, distortion of properties of steel alloys. The book includes entirely new chapters on heat-treated components, and the treatment of tool steels, stainless steels, and powder metallurgy steel components. Steel Heat Treatment: Metallurgy and Technologies provides a focused resource for everyday use by advanced students and practitioners in metallurgy, process design, heat treatment, and mechanical and materials engineering.

Carbon Sequestration Potential of Agroforestry Systems B. Mohan Kumar, P. K. Ramachandran Nair, 2011-08-05 Tree based production systems abound especially in the tropics. Despite the pervasiveness of such multipurpose "trees-outside-forest" resources, they have not attracted adequate attention in the development paradigms of many nation states. These multispecies production systems impact the ecosystem processes favourably. Yet, our understanding of the diversity attributes and carbon dynamics under agroforestry is not adequate. This book focuses on the role of multispecies production systems involving tree and crop species as a means for carbon sequestration and thereby reduce atmospheric carbon dioxide levels. Sixteen chapters organized into three broad sections titled: Measurement and Estimation, Agrobiodiversity and Tree Management, and Policy and Socioeconomic Aspects represent a cross section of the opportunities and challenges in current research and emerging issues in harnessing carbon sequestration potential of agroforestry systems.

Handbook of Industrial Membranes K. Scott, 1995-12-20 This manual contains necessary and useful information and data in an easily accessible format relating to the use of membranes. Membranes are among the most important engineering components in use today, and each year more and more effective uses for membrane technologies are found - for example: water purification, industrial effluent treatment, solvent dehydration by per-vaporation, recovery of volatile organic compounds, protein recovery, bioseparations and many others. The pace of change in the membrane industry has been accelerating rapidly in recent years, occasioned in part by the demand of end-

users, but also as a result of the investment in R&D by manufacturers. To reflect these changes the author has obtained the latest information from some of the leading suppliers in the business. In one complete volume this unique handbook gives practical guidance to using selected membrane processes in individual industries while also providing a useful guide to equipment selection and usage.

Economics of Forest Resources Gregory S. Amacher,Markku Ollikainen,Erkki Koskela,2009 A comprehensive and technical survey of forest resource economics, concentrating on developments in the last twenty years regarding policy instrument choice and uncertainty. The field of forest economics has expanded rapidly in the last two decades, and yet there exists no up-to-date textbook for advanced undergraduate-graduate level use or rigorous reference work for professionals. Economics of Forest Resources fills these gaps, offering a comprehensive technical survey of the field with special attention to recent developments regarding policy instrument choice and uncertainty. It covers all areas in which mathematical models have been used to explain forest owner and user incentives and government behavior, introducing the reader to the rigor needed to think through the consequences of policy instruments. Technically difficult concepts are presented with a unified and progressive approach; an appendix outlines the basic concepts from calculus needed to understand the models and results developed. The book first presents the historical and classic models that every student or researcher in forest economics must know, including Faustman and Hartman approaches, public goods, spatial interdependence, two period life-cycle models, and overlapping generations problems. It then discusses topics including policy instrument choice, deforestation, biodiversity conservation, and age-class based forest modeling. Finally, it surveys such advanced topics as uncertainty in two period models, catastrophic risk, stochastic control problems, deterministic optimal control, and stochastic and deterministic dynamic programming approaches. Boxes with empirical content illustrating applications of the theoretical material appear throughout. Each chapter is self-contained, allowing the reader, student, or instructor to use the text according to individual needs.
