Korea Mark E. Manyin,Edgar V. Connor,2002 The United States has a long-maintained strong affiliation with South Korea. On the other hand, North Korea, a country on President Bush's 'axis of evil' list, and the United States have been negotiating for years about preventing North Korea from producing weapons of mass destruction. Under the current conditions, the United States sends aid to North Korea each year and in return North Korea does not build these weapons. Are we being blackmailed and are we entirely sure they are sticking to their end of the bargain? This book discusses North Korea's military capabilities and the desperate attempt by the United States to curtail that progress. Also this book will address the struggle of democracy happening in South Korea, along with the United States' role in that effort.

North Korea: Legislative Basis for U.S. Economic Sanctions Dianne E. Rennack,

The Rejection of Consequentialism Samuel Scheffler,1994-08-11 In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need

not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

The Geometry of Desert Shelly Kagan, 2014-12-04 People differ in terms of how morally deserving they are. And it is a good thing if people get what they deserve. Accordingly, it is important to work out an adequate theory of moral desert. But while certain aspects of such a theory have been frequently discussed in the philosophical literature, many others have been surprisingly neglected. For example, if it is indeed true that it is morally good for people to get what they deserve, does it always do the same amount of good when someone gets what they deserve? Or does it matter how deserving the person is? If we cannot give someone exactly what they deserve, is it better to give too much-or better to give too little? Does being twice as virtuous make you twice as deserving? And how are we to take into account the thought that what you deserve depends in part on how others are doing? The Geometry of Desert explores a number of these less familiar questions, using graphs to illustrate the various possible answers. The result is a more careful investigation into the nature of moral desert than has ever previously been offered, one that reveals desert to have a hidden complexity that most of us have failed to recognize.
