Books & Bones & Other Things Jan K. Coetzee,2018-07-03 Books tell stories about our lifeworld. In this book Jan Coetzee invites us to critically inquire into the aims, the content, and the context of the stories contained in a collection of old books from an old world. Without opening these old texts and without converting the original print on the pages to meaning and message, Coetzee brings the books into a dialogue with each other. Together with accompanying sculpted and/or found objects these books take on a new, broader function. By gathering them in one volume they attain a different character and tell us more than what the individual books ever could.

YOUTH CARE KNOWLEDGE EXCHANGE THROUGH ONLINE SIMULATION GAMING Roelof Petrus Hortulanus,2014 Youth care multi-disciplinary networks need flexible, interactive and attractive tools and methods for knowledge exchange in view of timely, effective and durable help in complex parenting problem situations. Social media, virtuality, simulation and gaming gain an increasing significance in the way people share information, learn and organize themselves. This leads to the question whether youth care practice is ready to adopt some online practicalities for network exchange. This design study describes model development and model appreciation of online role-play simulation gaming as a time, pace and place independent way to share expertise, information and knowledge among the actors in youth care practice. The results show that youth care professionals think that simulation gaming is relevant and convenient to unravel difficult issues, to elaborate network strategies, and to jointly reflect on intervention. The research is unique in domains of youth care intervention and in game theory. The singularity of contexts and actors is taken as starting point in a cross-over of game design and behavioral science. Online role-play simulation gaming leads to a better understanding of complexity in youth care situations and to a greater awareness of network capacities and capabilities and helps to establish accountability of choices of intervention.

Cognitive Structures in Scientific Inquiry ,2016-08-01 This book is the second of two volumes devoted to the work of Theo Kuipers, a leading Dutch philosopher of science. Philosophers and scientists from all over the world, thirty seven in all, comment on Kuipers' philosophy, and each of their commentaries is followed by a reply from Kuipers. The present volume is devoted to Kuipers' neo-classical philosophy of science, as laid down in his Structures in Science (Kluwer, 2001). Kuipers defends a dialectical interaction between science and philosophy in that he views philosophy of science as a meta-science which formulates cognitive structures that provide heuristic patterns for actual scientific research, including design research. In addition, Kuipers pays considerable attention to the computational approaches to philosophy of science as well as to the ethics of doing research. Thomas Nickles, David Atkinson, Jean-Paul van Bendegem, Maarten Franssen, Anne Ruth Mackor, Arno Wouters, Erik Weber & Helena de Preester, Eric Scerri, Adam Grobler & Andrzej Wisniewski, Alexander van den Bosch, Gerard Vreeswijk, Jaap Kamps, Paul Thagard, Emma Ruttkamp, Robert Causey, Henk Zandvoort comment on these ideas of Kuipers, and many present their own account. The present book also contains a synopsis of Structures in Science. It can be read independently of the first volume of Essays in Debate with Theo Kuipers, which is devoted to Kuipers' From Instrumentalism to Constructive Realism (2000).

Confirmation, Empirical Progress, and Truth Approximation Theo A. F. Kuipers,2005 This book is the first of two volumes devoted to the work of Theo Kuipers, a leading Dutch philosopher of science. Philosophers and scientists from all over the world, thirty seven in all, comment on Kuipers' philosophy, and each of their commentaries is followed by a reply from Kuipers. The present volume focuses on Kuipers' views on confirmation, empirical progress, and truth approximation, as laid down in his From Instrumentalism to Constructive Realism (Kluwer, 2000). In this book, Kuipers offered a synthesis of Carnap's and Hempel's confirmation theory on the one hand, and Popper's theory of truth approximation on the other. The key element of this synthesis is a sophisticated methodology, which enables the evaluation of theories in terms of their problems and successes (even if the theories are already falsified), and which also fits well with the claim that one theory is closer to the truth than another. Ilkka Niiniluoto, Patrick Maher, John Welch, Gerhard Schurz, Igor Douven, Bert Hamminga, David Miller, Johan van Benthem, Sjoerd Zwart, Thomas Mormann, Jesús Zamora Bonilla, Isabella Burger & Johannes Heidema, Joke Meheus, Hans Mooij, and Diderik Batens comment on these ideas of Kuipers, and many present their own account. The present book also contains a synopsis of From Instrumentalism to Constructive Realism. It can be read independently of the second volume of Essays in Debate with Theo Kuipers, which is devoted to Kuipers'

Structures in Science (2001).
