Keyword Search in Databases Jeffrey Xu Yu,Lijun Chang,Lu Qin,2022-06-01 It has become highly desirable to provide users with flexible ways to query/search information over databases as simple as keyword search like Google search. This book surveys the recent developments on keyword search over databases, and focuses on finding structural information among objects in a database using a set of keywords. Such structural information to be returned can be either trees or subgraphs representing how the objects, that contain the required keywords, are interconnected in a relational database or in an XML database. The structural keyword search is completely different from finding documents that contain all the user-given keywords. The former focuses on the interconnected object structures, whereas the latter focuses on the object content. The book is organized as follows. In Chapter 1, we highlight the main research issues on the structural keyword search in different contexts. In Chapter 2, we focus on supporting structural keyword search in a relational database management system using the SQL query language. We concentrate on how to generate a set of SQL queries that can find all the structural information among records in a relational database completely, and how to evaluate the generated set of SQL queries efficiently. In Chapter 3, we discuss graph algorithms for structural keyword search by treating an entire relational database as a large data graph. In Chapter 4, we discuss structural keyword search in a large tree-structured XML database. In Chapter 5, we highlight several interesting research issues regarding keyword search on databases. The book can be used as either an extended survey for people who are interested in the structural keyword search or a reference book for a postgraduate course on the related topics. Keywords of Mobility Noel B. Salazar,Kiran Jayaram,2016-06-01 Scholars from various disciplines have used key concepts to grasp mobilities, but as of yet, a working vocabulary of these has not been fully developed. Given this context and inspired in part by Raymond Williams' Keywords (1976), this

edited volume presents contributions that critically analyze mobility-related keywords: capital, cosmopolitanism, freedom, gender, immobility, infrastructure, motility, and regime. Each chapter provides an historical context, a critical analysis of how the keyword has been used in relation to mobility, and a conclusion that proposes future usage or research.
