**Integrated Watershed Management** E. Beheim,G.S. Rajwar,M. Haigh,J. Krecek,2012-03-05  
Headwaters are fragile environments threatened by anthropogenic actions. The regeneration of headwaters calls for a practical approach through integrated environmental management. This book discusses various issues concerning headwater regions of the world under wide-ranging themes: climate change impacts, vegetal cover, sub-surface hydrology, catchment and streamflow hydrology, pollution, water quality and limnology, remote sensing and GIS, environmental impact assessment and mitigation, socio-economic impacts, public participation, education and management, and integrated watershed management. This book aims to bring about an awareness in sustainable regeneration of headwater regions and particularly highlighting the problems of environmental management in highlands and headwaters. These regions consist of great reserves of natural resources which need to be exploited and managed sustainably.

**Empirico-Statistical Analysis of Narrative Material and its Applications to Historical**

**Dating** A.T. Fomenko,2013-11-11 Today the methods of applied statistics have penetrated very different fields of knowledge, including the investigation of texts of various origins. These texts may be considered as signal sequences of different kinds, long genetic codes, graphic representations (which may be coded and represented by a text), as well as actual narrative texts (for example, historical chronicles, originals, documents, etc. ). One of the most important problems arising here is to recognize dependent text, i. e. , texts which have a measure of resemblance, arising from some kind of common origin. For instance, in pattern-recognition problems, it is essential to identify from a large set of patterns a pattern that is closest to a given one; in studying long signal sequences, it is important to recognize homogeneous subsequences and the places of their junction. This includes, in particular, the well-known change-point problem, which is given considerable attention in mathematical statistics and the theory of stochastic processes. As applied to the study of narrative texts, the problem of recognizing dependent and independent texts ( e. g. , chronicles) leads to the problem of finding texts having a common source, i. e. , the same original (such texts are naturally called dependent), or, on the contrary, having different sources (such texts are naturally called independent). Clearly, such problems are exceedingly complicated, and therefore the appearance of new empirico-statistical recognition methods which, along with the classical approaches, may prove useful in concrete studies (e. g. , source determination) is welcome.

**Current Perspectives and New Directions in Mechanics, Modelling and Design of Structural Systems** Alphose Zingoni, 2022-09-02 Current Perspectives and New Directions in Mechanics, Modelling and Design of Structural Systems comprises 330 papers that were presented at the Eighth International Conference on Structural Engineering, Mechanics and Computation (SEMC 2022, Cape Town, South Africa, 5-7 September 2022). The topics featured may be clustered into six broad categories that span the themes of mechanics, modelling and engineering design: (i) mechanics of materials (elasticity, plasticity, porous media, fracture, fatigue, damage, delamination, viscosity, creep, shrinkage, etc); (ii) mechanics of structures (dynamics, vibration, seismic response, soil-structure interaction, fluid-structure interaction, response to blast and impact, response to fire, structural stability, buckling, collapse behaviour); (iii) numerical modelling and experimental testing (numerical methods, simulation techniques, multi-scale modelling, computational modelling, laboratory testing, field testing, experimental measurements); (iv) design in traditional engineering materials (steel, concrete, steel-concrete composite, aluminium, masonry, timber); (v) innovative concepts, sustainable engineering and special structures (nanostructures, adaptive structures, smart structures, composite structures, glass structures, bio-inspired structures, shells, membranes, space

structures, lightweight structures, etc); (vi) the engineering process and life-cycle considerations (conceptualisation, planning, analysis, design, optimization, construction, assembly, manufacture, maintenance, monitoring, assessment, repair, strengthening, retrofitting, decommissioning). Two versions of the papers are available: full papers of length 6 pages are included in the e-book, while short papers of length 2 pages, intended to be concise but self-contained summaries of the full papers, are in the printed book. This work will be of interest to civil, structural, mechanical, marine and aerospace engineers, as well as planners and architects.
