Moral Psychology Valerie Tiberius,2023-07-31 Released in 2014, this was the first philosophy textbook in moral psychology, introducing students to a range of philosophical topics and debates such as: what is moral motivation? Do reasons for action always depend on desires? Is emotion or reason at the heart of moral judgment? Under what conditions are people morally responsible? Are there self-interested reasons for people to be moral? The Second Edition of *Moral Psychology: A Contemporary Introduction*, updates its responses to these questions, taking advantage of the explosion of recent research from philosophers and psychologists on these topics, and adding a chapter on the question of whether morality is innate or learned. As before, the book emphasizes the relationship between traditional and interdisciplinary approaches to moral psychology and aims to carefully explain how empirical research is (or is not) relevant to philosophical inquiry. The bulleted summaries, study questions, and lists for further readings at the end of each chapter have been updated. Key Updates to the Second Edition: Includes a new opening section on human nature, borrowing material from elsewhere in the book Adds a new chapter on evolutionary and developmental arguments for the innateness of morality Expands coverage of the challenges to psychological research, including the replication crisis and the WEIRDness challenge Provides a new section on implicit bias and moral responsibility Offers enhanced clarity and accessibility throughout Includes up-to-date further reading sections and bibliography

Robots That Kill Judith A. Markowitz,2019-04-17 This book describes real-world killer robots using a blend of perspectives. Overviews of technologies, such as autonomy and artificial intelligence, demonstrate how science enables these robots to be effective killers. Incisive analyses of social controversies swirling around the design and use of killer robots reveal that science, alone, will not govern their future. Among those disputes is whether fully-autonomous, robotic weapons should be banned. Examinations of killers from the golem to Frankenstein's monster reveal that artificially-created beings like them are precursors of real 21st century killer robots. This book laces the death and destruction caused by all these killers with science and humor. The seamless combination of these elements produces a deeper and richer understanding of the robots around us.

Zed Joanna Kavenna,2020-01-14 “[An] insightful, unsettling look at how technology impacts our lives. . .Kavenna has skillfully made our present feel like dystopian fiction.” USA TODAY Named a Best Book of 2020 by USA TODAY From the winner of the Orange Award for New Writing comes a blistering, satirical novel about life under a global media and tech corporation that knows exactly what we think, what we want, and what we do—before we do. One corporation has made a perfect world based on a perfect algorithm . . . now what to do with all these messy people? Lionel Bigman is dead. Murdered by a robot. Guy Matthias, the philandering founder and CEO of the mega-corporation Beetle, insists it was human error. But was it? Either the predictive algorithms of Beetle's supposedly omniscient 'lifechain' don't work, or, they've been hacked. Both scenarios are impossible to imagine and signal the end of Beetle's technotopia and life as we know it. Dazzlingly original and darkly comic, Zed asks profound questions about who we are, what we owe to one another, and what makes us human. It describes our moment—the ugliness and the beauty—perfectly. Kavenna is a prophet who has seen deeply into the present—and thrown back her head and laughed.
