Once you start doing Sudoku puzzles, you'll never
want to stop. And there's a good reason why! Just
like physical exercise, your mind requires
training too! Here are the marvelous advantages of
playing Sudoku: Improves your memory: Your memory
and logic are fully activated when you are playing
Sudoku. We use our memory to remember numbers we
are considering, and we use logic to figure out
the potential answer in the next blank. Stimulates
your mind: Playing Sudoku trains your logical
thinking processing. It also helps you improve
your numeracy skills. Reduces your chances of
developing neurodegenerative diseases: Playing
Sudoku keeps your brain stimulated. Improves your
decision-making skills: Not only is playing Sudoku
exciting, but it helps you learn how to make a
decision and take action with less hesitation.
Increases your concentration skills: Sudoku
requires players to evaluate strategically and
solve obstacles creatively. If you get interrupted

in the middle of solving a puzzle, you'll have to restart the whole thinking process again, which helps you to develop your concentration and re-focusing skills. Feel Satisfied! Sudoku gives you a sense of fulfillment when you can solve a puzzle, especially if the puzzle is a difficult one. By playing Sudoku daily, you'll learn how to solve puzzles faster and eventually advance to harder levels. Exercise your mind, and you will become more content and smarter too! From now on, play Sudoku every day. Note: We specialize in local publishing. We have many Sudoku Genius volumes available and other great books too! Symptom-Free Vivacious Living Studies have shown that people who train their brains regularly can often stave off the symptoms of Alzheimer's and other forms of dementia. Neuroplasticity helps stroke survivors (and other brain injuries) recover their cognitive power more quickly, making full recovery a probability rather than just a possibility. Autopsies were done on highly-productive seniors--after death, of course--and found that they had been living with full-blown Alzheimer's disease. Yet they had shown no signs of having the disease while alive. One such study followed nuns in a convent. These nuns were tested regularly for cognitive changes. This convent order was especially active in the community and each nun was engaged in learning new skills. Their cognitive scores showed no signs of dementia. After death, autopsies showed that many of them had the signs of Alzheimer's disease. Yet due to

neuroplasticity, these nuns had continued to do well on cognitive tests and had continued to be contributing members of society well into their 90s. Have you Exercised your brain today?
