Civic Priests Marietta Horster, Anja Klöckner, 2011-11-30 Images and inscriptions on monuments can show us how priests and cult personnel saw themselves and were viewed by others, illuminating the social and political identity of these figures within their polis. Dedications and donations by cult personnel, and the honours that they earned, demonstrate their claim on the city's attention and their financial power. The cityscape itself came to be shaped, in varying intensities and forms, by statues in honour of cult personnel, set up by relatives, fellow citizens and other groups. This set of cultural records, analysed in the studies presented here, is central to understanding how the roles of priests and priestesses were constructed in social and political terms in post-classical Athens. The approaches are both historical and archaeological, and elucidate the religious functions that the cult personnel fulfilled for the city, and their perception, by themselves and by others, as citizens of the polis.

The Sword of Aradel Alexander Key, 2014-07-29 To save his kingdom, a stable boy steps through a portal to the future When the duke dies, the evil wizard Albericus presents his heir with the sword of Aradel, a magical blade whose owner can never be bested in combat. Brian, the stable boy, has no interest in politics until the day that he spills a water trough onto the new duke's horse and finds the sword of Aradel pointed at his throat. He picks up his quarterstaff, expecting certain death, but the lowly stable boy defeats the duke with ease. The sword of Aradel is a fake! The true sword has been hidden by spell in a far-off future land. A powerful sorceress knights Brian and sends him forward in time to find the blade that will save the kingdom. With Albericus in pursuit, Brian charges through the portal and emerges in a strange new world known as New York City, where a magic sword waits for a noble knight to wield it once again.

HEART CELL IN CULTURE Arie Pinson, 1987-12-31

Cell Culture Techniques in Heart and Vessel Research H.M. Piper, 2012-12-06 In the cardiovascular sciences, an increasing demand for the use of modern methods of cell biology has developed. The use of specific cell culture models of the various tissues involved is essential for most of these novel approaches. This book meets the demand for a comprehensive and easy accessible source for cell culture methods in cardiovascular research as it was not previously available. The basic methods for cultures of cardiomyocytes (embryonic and adult), endothelial cells (micro- and macrovascular), smooth muscle cells and pericytes are described in detail by an international selection of experts. Special chapters discuss the use of growth factors and attachment substrates, techniques for co-cultures, cultures on permeable filter membranes and microcarrier cultures. The methodological descriptions are sufficiently detailed for an immediate application in the laboratory. All chapters also contain a critical evaluation of alternative approaches.

Molecular and Cellular Mechanisms of Cardiovascular Regulation Hasso 04Scholz, Masao Endoh, Toshihiko Iijima, Martin Morad, Hasso Scholz, 2013-12-14 This volume contains selected papers presented at the Sendai International Symposium on Molecular and Cellular Mechanisms of Cardiovascular Regulation held from May 10-12, 1995, to honor the contributions of Professor Norio Taira, Chairman of the Department of Pharmacology (1972-1995), Tohoku University School of Medicine, Sendai, Japan. The Department of Pharmacology at Sendai has a long tradition of significant contribution to the development of drug therapy for cardiovascular diseases. The late Professor Koroku Hashimoto, the predecessor of Professor Norio Taira, first suggested the mode of action of calcium antagonists and their potential usefulness in therapy of ischemic heart disease and hypertension at an early stage of their development. The need for greater understanding of the pathophysiology of cardiovascular diseases is more critical now than ever before because modern advances in basic and clinical sciences have prolonged the average life expectancy. Using a wide range of molecular and electrophysiological techniques, major advances are occurring frequently in the field of cardiovascular physiology and pharmacology. Such multifaceted approaches are preferred because human cardiovascular diseases are complex, requiring multiple interventions and an in-depth understanding of molecular mechanisms underlying the disease. The first section of this book focuses on molecular mechanisms of ion channel regulation. Eight of ten chapters in this section are devoted to the recent advances in molecular characterization and regulation of various types of potassium channels in cardiac, vascular, and neuronal tissues. A discussion of the structure and function of sodium and calcium channels is also included.

Bootstrap Techniques for Signal Processing Abdelhak M. Zoubir, D. Robert Iskander, 2004-05-06 The statistical bootstrap is one of the methods that can be used to calculate estimates of a certain number of unknown parameters of a random process or a signal observed in noise, based on a random sample. Such situations are common

in signal processing and the bootstrap is especially useful when only a small sample is available or an analytical analysis is too cumbersome or even impossible. This book covers the foundations of the bootstrap, its properties, its strengths and its limitations. The authors focus on bootstrap signal detection in Gaussian and non-Gaussian interference as well as bootstrap model selection. The theory developed in the book is supported by a number of useful practical examples written in MATLAB. The book is aimed at graduate students and engineers, and includes applications to real-world problems in areas such as radar and sonar, biomedical engineering and automotive engineering.

Ion Channels T. Narahashi, 2012-12-06 A wealth of information has been accumulated about the function of ion channels of excitable cells since the extensive and pioneering voltage clamp studies by Hodgkin, Huxley, and Katz 36 years ago. The study of ion channels has now reached a stage at which a quantum jump in progress is anticipated. There are many good reasons for this. Patch clamp techniques originally developed by Neher and Sakmann 12 years ago have made it possible to study the function of ion channels in a variety of cells. Membrane ionic currents can now be recorded practically from many types of cells using the whole-cell patch clamp technique. The opening and closing of individual ion channels can be analyzed using the single-channel patch clamp method. Techniques have also been developed to incorporate purified ion channels into lipid bilayers to reconstitute an excitable membrane. Advanced techniques developed in molecular biology, genetics, and immunology, such as gene cloning and the use of monoclonal antibodies, are now being applied to the study of ion channels. A variety of drugs have now been found or are suspected to interact with ion channels to exert therapeutic effects. In addition to the classical examples, as represented by local anesthetics, many other drugs, including calcium antagonists, psychoactive drugs, cardiac drugs, and anticonvulsants, shown to alter ion channel function. For certain pesticides such as have been pyrethroids and DDT, sodium channels are clearly the major target site.

Digital Competition Law in Europe Marc Wiggers, Robin Struijlaart, Joost Dibbets, 2023-07-14 'Digital competition', a term and concept that has risen to the forefront of competition law, may be viewed as both promising and cautionary: on the one hand, it brings the promises of increased speed, efficiency and objectivity, and, on the other, it entails potential pitfalls such as hard-to-identify pathways to unfair pricing, dominant positions and their potential abuse, restriction of choice and abuse of personal data. Accordingly, jurisdictions around the world are taking measures to deal with the phenomenon. In this concise but thoroughly researched book – both informative and practical – lawyers from two prominent firms with specialised digital competition teams take stock and examine the state of digital competition in the enforcement practices of six competition authorities in Europe, most of these forerunners in the field of digital competition policy and enforcement. The competition authorities surveyed are those of the European Union, the United Kingdom, France, Germany, the Netherlands and Belgium. For each, an overview, spanning the period from 2012 to mid-2022 but including as many landmark cases as possible up to and including December 2022, includes not only landmark cases in which digital technologies have had a significant impact on the competition law outcome but also guidance documents such as speeches, policy statements, industry surveys and research reports. Activities and enforcement practices of the various authorities include the following and more: degree of activity; focus of the activity; enforcement styles; enforcement instruments; visible effectiveness of enforcement; and important insights and outlooks. Each overview contains separate chapters on cartel prohibition, the prohibition of abuse of a dominant position and merger control. Additional chapters – partially written by guest authors (who are all without a doubt true thought leaders: Tristan Byrne, Giuseppe Colangelo, Ai Deng, Teodora Groza, Daniel Mândrescu, Wolf Sauter, Thibault Schrépel, and Gareth Shier) – evaluate the similarities and differences in the enforcement practices and the positive and negative effects of digital competition in the jurisdictions investigated, the economic context, the most important game changers, and a concluding chapter offers recommendations. An indispensable guide to quickly and accessibly acquiring in-depth knowledge of competition law in the digital sector, this matchless volume is a must-read for any practitioner or academic who encounters competition law related to digital markets. The dilemmas and challenges of the new competition law reality – which is here already, like it or not – are clearly explained here for the benefit of regulators, academics, policymakers, judges, in-house counsel and lawyers specialising in competition law and intellectual property law.

Biochemistry and Cell Biology of Ageing: Part III Biomedical Science J. Robin Harris, Viktor I. Korolchuk, 2023-01-04 This book provides a state-of-the-art overview of key areas of subcellular aging research in human cells. The reader is introduced to the historical development and progress in biomedical aging research and learns, for example, about the role of microRNAs, circRNAs, mitochondria and extracellular vesicles in cellular senescence. The reader will also learn more about how gap junctions, the nuclear pore complex and the proteasome are affecting the ageing processes. In addition, novel therapeutic opportunities through modulation of cellular senescence are discussed. The book follows on from Parts I and II of Biochemistry and Cell Biology of Ageing (Volumes 90 and 91 of the Subcellular Biochemistry book series) by covering interesting and significant biomedical ageing topics not included in the earlier volumes. Comprehensive and cutting-edge, this book is a valuable resource for experienced researchers and early career scientist alike, who are interested in learning more about the fascinating and challenging question of why and how our cells age.

Adult heart muscle cells H.M. Piper, P.G. Spieckermann, 2013-04-17 With this volume results become generally available of a recent conference that was the first to

discuss properties of isolated heart muscle cells from the adult myocardium as a new cardiovascular research tool. The conference was held as an International Erwin Riesch Symposium under the auspices of the Deutsche Gesellschaft für Herz- und Kreislaufforschung at Spangenberg Castle, March 22-25, 1984. It was made possible through funding by the Erwin Riesch Foundation and the Bayer AG which deserve our gratitude for their generosity. It may not be fully reflected in this collection of papers that the atmosphere of this meeting was unique. The reason for this resided apparently in the still rudimentary experiences with the adult cardiocyte model that is now widely acknowledged to be very promising. Thus, quite basic interests brought together experts from different biological disciplines who in respect to this new model were all still beginners. It was noteworthy that such common interests exerted a unifying effect upon otherwise rather separated fields of science. The main task of the years to come will certainly consist in improving isolation and culturing conditions for adult myocytes in order to fully establish the isolated cell model in heart research
