It blends history, geology, chemistry, philosophy and, of course, physics in a way that's delightful to read.' - ABIGAIL BEALL, author of *The Art of Urban Astronomy* ----- Discover the secrets of one of the biggest puzzles in our history - Time. As a subject, it has perplexed and fascinated generations of scientists, historians and more, and continues to spark the most intriguing questions being asked in science today. Can time be stopped? Is time travel possible? Does time even exist...? In these ten bite-sized essays, Colin Stuart delves into these big questions and uncovers the most awe-inspiring and revealing things we should all know about time. Perfect for readers of Carlo Rovelli and anyone fascinated by space and the universe, this is a must-read for those short on time, but not curiosity.

**Time in Powers of Ten** Gerard 't Hooft, Stefan Vandoren, 2014 In this richly illustrated book, Nobel Laureate Gerard 't Hooft and Theoretical Physicist Stefan Vandoren describe the enormous diversity of natural phenomena that take place at different time scales. In the tradition of the bestseller *Powers of Ten*, the authors zoom in and out in time, each step with a factor of ten. Starting from one

second, time scales are enlarged until processes are reached that take much longer than the age of the universe. After the largest possible eternities, the reader is treated to the shortest and fastest phenomena known. Then the authors increase with powers of ten, until again the second is reached at the end of the book. At each time scale, interesting natural phenomena occur, spread over all scientific disciplines: orbital and rotation periods of planets and stars, decay times of elementary particles and atoms, biological rhythms and evolution processes, but also the different geological time scales. Readership: Science enthusiasts and students.

**The Living Universe** Duane Elgin, 2009-04-01 By the bestselling author of *Voluntary Simplicity* (over 150,000 sold) • Brings together cutting-edge science and ancient spiritual wisdom to demonstrate that the universe is a living, sentient system and that we are an integral part of it • Explores the power of this new paradigm to move humanity toward a sustainable and promising future Science has traditionally regarded the universe as mostly made up mostly of inert matter and empty space. At one time this point of view was liberating, part of the Enlightenment-born rationalism that helped humanity free itself from superstition and fear and achieve extraordinary intellectual and technological breakthroughs. But this paradigm has outlived its usefulness. It has led to rampant materialism and environmental degradation—if the universe is essentially dead and we are alive, then the inanimate stuff of the universe should be ours to exploit. But we now know that not only is the view of a dead universe destructive, it is also inaccurate and misleading. In *The Living Universe*, Duane Elgin brings together evidence from cosmology, biology, physics, and even his participation in NASA-sponsored psychic experiments to show that the universe is permeated by a living field and that we are always in communion with that field of aliveness whether we are conscious of it or not. This is a world-view that, as Elgin explains, is shared by virtually every spiritual tradition, and the implications of it are vast and deep. In a living system, each part is integral to the whole, so each of us is intimately connected to the entire universe. Elgin eloquently demonstrates how our identity manifests itself on a whole series of levels, from subatomic to galactic. We are, he writes, “far more than biological beings—we are beings of cosmic connection and participation.” To confront our ongoing planetary crisis of dwindling resources and escalating conflict, we need to move past an ideology of separation, competition, and exploitation. Duane Elgin asks us to see humanity sharing in the same field of aliveness, to discover how to live sustainably and harmoniously within the living universe.

**What God Knows** Harry Lee Poe, J. Stanley Mattson, 2005 When Einstein destroyed the old view of the universe, he destroyed the old notion of time with it. His new theory explained that time is a dimension of the physical cosmos like space, and like space it is relative. This collection of essays by theologians, physicists, and philosophers explores the theoretical aspects of the problem of time and its implications for faith and the understanding of God.

*50 Ideas You Really Need to Know: Universe* Joanne Baker, 2013-11-05 From dwarf planets to dark energy; and from the Big Bang to the death of stars, this book is the perfect introduction to the cutting-edge science that is shaping our understanding of our place in the

Universe and that could lead to the next great discovery--the detection of life beyond Earth.

Know-It-All Society: Truth and Arrogance in Political Culture Michael P. Lynch, 2019-08-13 Winner • National Council of Teachers of English - George Orwell Award for Distinguished Contribution to Honesty and Clarity in Public Language The “philosopher of truth” (Jill Lepore, *The New Yorker*) returns with a clear-eyed and timely critique of our culture’s narcissistic obsession with thinking that “we” know and “they” don’t. Taking stock of our fragmented political landscape, Michael Patrick Lynch delivers a trenchant philosophical take on digital culture and its tendency to make us into dogmatic know-it-alls. The internet—where most shared news stories are not even read by the person posting them—has contributed to the rampant spread of “intellectual arrogance.” In this culture, we have come to think that we have nothing to learn from one another; we are rewarded for emotional outrage over reflective thought; and we glorify a defensive rejection of those different from us. Interweaving the works of classic philosophers such as Hannah Arendt and Bertrand Russell and imposing them on a cybernetic future they could not have possibly even imagined, Lynch delves deeply into three core ideas that explain how we’ve gotten to the way we are: • our natural tendency to be overconfident in our knowledge; • the tribal politics that feed off our tendency; • and the way the outrage factory of social media spreads those politics of arrogance and blind conviction. In addition to identifying an ascendant “know-it-all-ism” in our culture, Lynch offers practical solutions for how we might start reversing this dangerous trend—from rejecting the banality of emoticons that rarely reveal insight to embracing the tenets of Socrates, who exemplified the humility of admitting how little we often know about the world, to the importance of dialogue if we want to know more. With bracing and deeply original analysis, Lynch holds a mirror up to American culture to reveal that the sources of our fragmentation start with our attitudes toward truth. Ultimately, *Know-It-All Society* makes a powerful new argument for the indispensable value of truth and humility in democracy.

When Judaism Meets Science Roger L. Price, 2019-04-22 This book seeks to confront the challenge that science presents to the traditional pillars of Judaism. It identifies and analyzes a wide variety of issues, including some contemporary sacred cows. First, the book considers what is fact and what is fiction in the primary stories contained in Judaism’s foundational texts. Then, drawing on Jewish ethical teachings, it seeks to determine how Judaism and science can inform each other with respect to a broad range of contemporary issues, from abortion and allergies to vaccinations and violence with firearms. Finally, it peeks into the future to address issues that Judaism and science are just now beginning to discuss, such as an exotheology for aliens on distant planets, a Jewdroid who seeks acceptance in a shul, and even the fate of the universe itself. *When Judaism Meets Science* addresses readers of all persuasions—regardless of denomination and whether a believer or not—as the author builds a case, with specific recommendations, for the value of a reality-based Judaism, one grounded on both traditional ethics and empirical evidence that can resonate with the educated adults of Israel.

The Invisible Universe Matthew Bothwell, 2021-11-11 From the discovery of entirely new kinds of galaxies to a window into cosmic ‘prehistory’, Bothwell shows us the Universe as we’ve never seen it before – literally. Since the dawn of our species, people all over the world have gazed in awe at the night sky. But for all the beauty and wonder of the stars, when we look with just our eyes we are seeing and appreciating only a tiny fraction of the Universe. What does the cosmos have in store for us beyond the phenomena we can see, from black holes to supernovas? How different does the invisible Universe look from the home we thought we knew? Dr Matt Bothwell takes us on a journey through the full spectrum of light and beyond, revealing what we have learned about the mysteries of the

Universe. This book is a guide to the ninety-nine per cent of cosmic reality we can't see – the Universe that is hidden, right in front of our eyes. It is also the endpoint of a scientific detective story thousands of years in the telling. It is a tour through our Invisible Universe.

How the Universe Works: Implementing the Four Cosmic Principles P. S. J. Schutte, 2014-10-25 This book includes for the first time ever how the Universe started from the point of the first point. The law is that the distances of the planets from the sun, is based on the numerical sequence 0, 3, 6, 12, 24, 48... By adding 4 to each number and then by dividing by that number by 10 gives the sequence of 0.4, 0.7, 1, 1.6, 2.8, 5.6, which represents the distances in astronomical units for planets. I explain why we start with the number 3; that I explain, why we have to add 4, the number 4 this I explain and why we then have to divide by 10 the number 10 this too I explain. I explain in precise detail why the planet distances from the sun doubles every time. Moreover I explain what effect this has on gravity. This has never been achieved before. I took this back also to prove how the Universe started and why Jupiter is so much bigger than all the other planets. From information gained by using the Titius Bode law I read what happened in the solar system as the solar system developed. I explain how this law and 3 other laws form gravity and how this affects all of us on earth in experiencing gravity. The Titius Bode Law is deciphered for the first time ever but you don't know what the Titius Bode law means because science has been hiding this law for 250 years out of plain sight. Since 1776 not one in science pursuit to find an explanation about the Titius Bode law... If you don't believe me find out what the Titius Bode law is. Then find how amazed you are that you know nothing about such a most important issue in nature. Ask yourself why you don't know... Your ignorance about this speaks volumes... and now I deciphered the Titius Bode law and found it is adding  $3 + 4 = 7$  Reading the title How the Solar System forms stops every Physicist's having further interest. However this title refers to how nature applies physics and this is nature's law. The book is also named ((Proving How the Titius Bode law works) and this means nothing to everybody, although this law forms the solar system since the beginning of time. Pretending its not there such as science do does not promote science's credibility but spreads ignorance. It is what is in nature and what is used by nature to form the solar system and says a lot about the way science ignored this in the past. Science ignorance has never brought about reality in physics but it placed science in a role of denial and deception and I prove that. Reality in physics is that Newton's cosmological concepts are not in nature therefore not in reality and using Newton's "mass" concept in the cosmos has no more value than using your imagination. Read this and see for your own personal information gain. This is what is out there used by nature and what science puts forward as Newton's gravitational truth is the biggest scam any person ever conducted on the human population. If you read this you will find out how the cosmos works. I take you to the beginning where the Universe started by starting with one spot. In this version I take the reader into the start of the Universe, into the very first instant where a Universe came about. That I am able to do because I found the keys by which time builds space as a Universe. By studying the four principles that form gravity and by realising gravity is the movement of space inside space I was able to pinpoint where the start of the Universe began. I can show you where to put your finger on the spot where the Universe started and from there guide you along the route of development. I show you how the very first particle started and not only that but what the very first particle was that formed. This book opens an avenue never travelled before in science.. The book "How the Universe Works" is also named (Nature Working in the Natural Universe) and this means nothing to everybody, although this law forms the solar system since the beginning of time. Pretending its not there such as science do does not promote science's credibility but spreads ignorance.

**How Physics Makes Us Free** J. T. Ismael, 2016-02-03 In 1687 Isaac Newton ushered in a new scientific era in which laws of nature

could be used to predict the movements of matter with almost perfect precision. Newton's physics also posed a profound challenge to our self-understanding, however, for the very same laws that keep airplanes in the air and rivers flowing downhill tell us that it is in principle possible to predict what each of us will do every second of our entire lives, given the early conditions of the universe. Can it really be that even while you toss and turn late at night in the throes of an important decision and it seems like the scales of fate hang in the balance, that your decision is a foregone conclusion? Can it really be that everything you have done and everything you ever will do is determined by facts that were in place long before you were born? This problem is one of the staples of philosophical discussion. It is discussed by everyone from freshman in their first philosophy class, to theoretical physicists in bars after conferences. And yet there is no topic that remains more unsettling, and less well understood. If you want to get behind the façade, past the bare statement of determinism, and really try to understand what physics is telling us in its own terms, read this book. The problem of free will raises all kinds of questions. What does it mean to make a decision, and what does it mean to say that our actions are determined? What are laws of nature? What are causes? What sorts of things are we, when viewed through the lenses of physics, and how do we fit into the natural order? Ismael provides a deeply informed account of what physics tells us about ourselves. The result is a vision that is abstract, alien, illuminating, and-Ismael argues-affirmative of most of what we all believe about our own freedom. Written in a jargon-free style, *How Physics Makes Us Free* provides an accessible and innovative take on a central question of human existence.

Convergent Knowing Simon Appolloni, 2018-11-16 Global environmental destruction, growing inequality, and the persistent poverty afflicting the majority of humans on the planet challenge Christian theorists, theologians, and ethicists in their pursuit of an ethical vision that is both environmentally sustainable and just for all of creation. Too often their visions – which start with traditional understandings of the Christian faith, prevalent approaches to science, or current ethical models – are inadequate. In *Convergent Knowing* Simon Appolloni proposes a new framework for ethical deliberation in which the epistemological lines between religion and science are somewhat blurred. This framework opens up avenues to explore new paradigms for Christianity, science, and liberation while addressing interrelated questions not always manifest within the religion, science, and ethics debates: what kind of ethics, what kind of science, and what kind of Christianity do we need today and tomorrow when the liberation of countless subjects of creation is at stake? Exploring and analyzing the work of Rosemary Radford Ruether, Leonardo Boff, Diarmuid O'Murchu, and Thomas Berry, four Christian ethical thinkers who have borrowed from the natural sciences to unite a liberationist agenda with an environmental ethic, *Convergent Knowing* assists Christian thinkers struggling to integrate science, environment, liberation, and their faith.

*The Bhagavad Gita for Awakening* Swami Nirmalananda Giri (Abbot George Burke), 2018-11-27 From *Publisher's Weekly*: [Abbot George] Burke enthusiastically explores the story as a means for knowing oneself, the cosmos, and one's calling within it. His plainspoken insights often distill complex lessons with simplicity and sagacity. Those with a deep interest in the Gita will find much wisdom here. Several thousand years ago in north-central India, two people sat in a chariot in the midpoint of a great battlefield. One of them, the yogi Arjuna, knew that it would be not be long before the conflict would begin. So he asked Krishna, the Master of Yoga (Yogeshwara), what should be his attitude and perspective in this moment. And above all: What should he do? There was no time to spare in empty words. In a brief discourse, later turned into seven hundred Sanskrit verses by the sage Vyasa, Krishna outlined to Arjuna the way to live one's entire life so as to gain perfect self-knowledge and self-mastery. The *Bhagavad Gita* tells us that we can attain a Knowing beyond even what it tells us. And it shows us the way. With penetrating insight, Abbot George Burke illumines the

Bhagavad Gita's practical value for spiritual seekers, and the timelessness of India's most beloved scripture. With a unique perspective of a lifetime of study and practice of both Eastern and Western spirituality, Abbot George mines the treasures of the Gita and presents them in an easily intelligible fashion for those wishing to put these priceless teachings into practice. Drawing from the teachings of Sri Ramakrishna, Jesus, Paramhansa Yogananda, Ramana Maharshi, Swami Vivekananda, Swami Sivananda of Rishikesh, Papa Ramdas, and other spiritual masters and teachers, as well as his own experiences, Abbot Burke illustrates the teachings of the Gita with stories which make the teachings of Krishna in the Gita vibrant and living. While Yogananda in his commentary on the Gita, "God Talks with Arjuna: The Bhagavad Gita," focuses on the valuable symbolism contained in the Gita, Abbot Burke dwells primarily on the practical aspects, and what aspirants can put into practice here and now on a daily basis. Any student of the Bhagavad Gita will find "The Bhagavad Gita for Awakening" an essential companion in their studies. At times general principles found in the Gita are illumined, and in other places the deeper meanings found in the Sanskrit text are explained word by word so that seekers will have an in-depth understanding of the religion, practices, and culture that those familiar with Indian religion and philosophy take for granted. A must read for anyone on a spiritual quest for the truth!" —Sailaja Kuruvadi

*Experiencing the Knowing of Faith* Sharon Warner, 2000 What is religious faith? And how does modern society view truth? Sharon Warner, in *Experiencing the Knowing of Faith*, discusses the understanding formed by deep truth, or knowledge intrinsic to a person's self-identity. She critiques today's susceptibility to the paradigm of Cartesian dualities such as mind-body and subject-object, and in doing so utilizes the philosophy of Alfred North Whitehead and Michael Polanyi. Concluding with an exploration of the relevance of this theory for teaching faith, the work will be of great use to religious scholars and to philosophers.
