**KOA and the Art of Kamping** John Brunkowski, Michael L. Closen, 2013 Featuring 230 exceptional photos, this is the first book covering KOA - Kampgrounds of America - the largest travel camping host in the world and the artwork the organization has commissioned over the years. Each original work of art is related to camping and RVing. The artwork includes paintings, sculptures, drawings, photographs, and other forms, all housed in the KOA International Headquarters in the company's Art of Kamping Gallery. The subjects covered in these chapters include folk art, humor, whimsy, civic spirit, international, the KOA-Airstream connection, a commemoration of KOA's 2012 fiftieth anniversary celebration, and more. Taken together, this collection celebrates the soft rugged camping experience KOA provides, reflecting the belief that camping is an important and positive life experience. It shows how camping brings families and friends together, escaping the humdrum everyday experience in favor of the exciting, restorative outdoor experience enjoyed by young and old alike.

Agroforestry Jagdish Chander Dagar,Vindhya Prasad Tewari,2018-04-06 Agroforestry (AF) is a dynamic, ecologically based, natural resources management system that, by integrating trees on farms, ranches, and in other landscapes, diversifies and increases production and promotes social, economic, and environmental benefits for land users. Further, it is receiving increasing attention as a sustainable land-management option worldwide because of its ecological, economic, and social attributes. Advances have been achieved by building on past research accomplishments and expanding AF's stakeholder base, which now includes private/public partnerships, communities, ecologists, farmers, indigenous peoples, and policymakers in both temperate and tropical countries. AF has now been recognized as a valuable problem-solving approach to ensuring food security and rebuilding resilient rural environments. Recent studies have shown that more than 1 billion hectares of agricultural land have more than 10% tree cover. Of this area, 160 million hectares have more than 50% tree cover. Agricultural ecosystems can be further improved through AF to achieve environmental restoration, greater farm productivity, and key ecological services, including climate change mitigation

and adaptation for improved rural livelihood. In fact, it is largely considered synonymous with climate smart agriculture and a remedy for many modern environmental challenges. Consequently, AF's knowledge base is being expanded at a rapid rate, as illustrated by the increasing number and quality of scientific publications on various forms and different aspects of AF. This book offers state-of-the-art information on the fundamental concepts and history of AF and its evolution as a science, presenting a wealth of advanced research results and evaluations relating to different aspects of AF. Accordingly, it will be useful for a broad readership, including students, foresters, farmers, local communities, indigenous peoples, civil society institutions, media, policymakers and the general public.

**Environmentally Friendly (Bio)Technologies for the Removal of Emerging Organic and Inorganic Pollutants from Water** Eldon R. Rene,Li Shu,Veeriah Jegatheesan,2019-08-15 This book highlights the

impacts of emerging pollutants (both organic and inorganic) in water bodies and the role and performances of different water and wastewater treatment approaches that are presently being employed in the field of environmental engineering. Some of these approaches are focused on ‘end-of-pipe’ treatment, while most of these approaches are focused on the application of novel physico-chemical and biological techniques for wastewater treatment and reuse. The goal of this book is to present the emerging technologies and trends in the field of water and wastewater treatment. The papers in this book provide clear proof that environmentally friendly (bio)technologies are becoming more and more important and playing a critical role in removing a wide variety of organic and inorganic pollutants from water. In Focus – a book series that showcases the latest accomplishments in water research. Each book focuses on a specialist area with papers from top experts in the field. **Furry Fandom Conventions, 1989–2015** Fred Patten,2016-12-21 Furry fandom—an adult social group interested in anthropomorphic animals in art, literature and culture—has grown since the 1980s to include an estimated 50,000 “furries.” Their largest annual convention drew more than 6,000 attendees in 2015, including 1,000 dressed in “fur suits” or mascot-type animal costumes.

Conventions typically include awards, organizations, art, literature and movies, encompassing a wide range of creative pursuits beyond animal costuming. This study of the furry subculture presents a history of the oft-misunderstood group and lists all conventions around the world from 1989 through 2015, including organizers, guests of honor and donations to charity.

Climate Change, Disasters, and Internal Displacement in Asia and the Pacific Matthew

Scott, Albert Salamanca, 2020-11-15 This book examines how states in eight countries across Asia and the Pacific address internal displacement in the context of disasters and climate change. The Asia and the Pacific region accounts for the majority of global disaster-related displacement, but the experience of the millions of individuals displaced differs according to gender, age, ethnicity, (dis)ability, caste, and so forth and is dependent on the legal, administrative, social, and economic structures and processes in place to support them. This book adopts a human rights-based approach, investigating the role of law and policy in preventing displacement, protecting people who are displaced, and engendering durable solutions across cases drawn from Thailand, Cambodia, Indonesia, the Philippines, Nepal,

Bangladesh, Vanuatu, and the Solomon Islands. The specific cases in the book also reflect critically on the term ‘displacement’ and the wider normative framework within which this phenomenon is conceptualised and addressed. The book will be of interest to students, researchers, and practitioners working at the intersection of human rights, human mobility, development, disaster risk reduction and management, and climate change adaptation.

*Uncertainty, Calibration and Probability* C.F Dietrich,2017-07-12 All measurements are subject to error because no quantity can be known exactly; hence, any measurement has a probability of lying within a certain range. The more precise the measurement, the smaller the range of uncertainty.

*Uncertainty, Calibration and Probability* is a comprehensive treatment of the statistics and methods of estimating these calibration uncertainties. The book features the general theory of uncertainty involving

the combination (convolution) of non-Gaussian, student t, and Gaussian distributions; the use of rectangular distributions to represent systematic uncertainties; and measurable and nonmeasurable uncertainties that require estimation. The author also discusses sources of measurement errors and curve fitting with numerous examples of uncertainty case studies. Many useful tables and computational formulae are included as well. All formulations are discussed and demonstrated with the minimum of mathematical knowledge assumed. This second edition offers additional examples in each chapter, and detailed additions and alterations made to the text. New chapters consist of the general theory of uncertainty and applications to industry and a new section discusses the use of orthogonal polynomials in curve fitting. Focusing on practical problems of measurement, Uncertainty, Calibration and Probability is an invaluable reference tool for R&D laboratories in the engineering/manufacturing industries and for undergraduate and graduate students in physics, engineering, and metrology.

**Characteristics of Hawaiian Volcanoes** Michael P. Poland, Taeko Jane Takahashi, Claire M. Landowski, 2014 Characteristics of Hawaiian Volcanoes establishes a benchmark for the current

understanding of volcanism in Hawaii, and the articles herein build upon the elegant and pioneering work of Dutton, Jagger, Steams, and many other USGS and academic scientists. Each chapter synthesizes the lessons learned about a specific aspect of volcanism in Hawaii, based largely on continuous observation of eruptive activity and on systematic research into volcanic and earthquake processes during HVO's first 100 years.
