*Massively Multi-Agent Technology* Nadeem Jamali,Paul Scerri,Toshiharu Sugawara,2008-08-17 With the proliferation of consumer devices, computation is becoming truly ubiquitous. Multi-agent systems hold the promise to enable utilization of these computational resources for ground-breaking new applications. However, as the number of agents involved in multi-agent computations rises, traditional approaches of building multi-agent systems fail to scale. Massively multi-agent systems address this challenge of scale. Massive, in this context, is meant to capture the complexity of such systems, which precludes decision making to focus on individual agents. Agents making decisions have to reduce the complexity of the space in which they must decide. The focus, therefore, is on the approaches to manage the complexity, implications of this abstraction, as well as on identifying ways of applying the paradigm to problems. Papers appearing in this volume have been selected from three international workshops held in conjunction with the International Conferences on Autonomous Agents and Multiagent Systems (AAMAS) held in 2006 and 2007: First International Workshop on Coordination and Control in Massively Multi-agent Systems (CCMMS 2007); and the jointly held Second

International Workshop on Massively Multi-agent Systems (MMAS 2006) and the Third International Workshop on Challenges in the Coordination of Large-Scale Multi-agent Systems (LSMAS 2006).

Edgington,2011-01-01 The Hanshin Earthquake was the largest disaster to affect postwar Japan and one of the most destructive postwar natural disasters to strike a developed country. Although the media focused on the disaster's immediate effects, the long-term reconstruction efforts have gone largely unexplored. Drawing on extensive fieldwork, David Edgington records the first ten years of reconstruction and recovery and asks whether planners successfully exploited opportunities to make a more sustainable and disaster-proof city. This book is an intricate investigation of one of the largest redevelopment projects in recent memory.

Hyogo-Ken Nanbu Earthquake of January 17, 1995: A Post-Earthquake Reconnaissance of Port Facilities describesØthe seismic performance of ports in the Osaka Bay region of Japan following the Hyogo-Ken Nanbu earthquake. A team of investigators observed and evaluated the seismic performance of the port facilities and then held numerous data-gathering meetings with representatives from relevant port authorities, engineering consulting firms, construction companies, universities, and private research organizations in Japan. The investigation was carried out over a 10-day period (February 18-27, 1995) and focused primarily on the Port of Kobe, the Port of Osaka and, to a lesser degree, the Kansai Airport. This first-hand documentation of perishable data will enhance future engineering and research work at these and other ports around the world.
