    <u>Understanding User-Web Interactions via Web Analytics</u>
Bernard J. Jansen,2022-06-01 This lecture presents an overview of
the Web analytics process, with a focus on providing insight and
actionable outcomes from collecting and analyzing Internet data.
The lecture first provides an overview of Web analytics, providing
in essence, a condensed version of the entire lecture. The lecture
then outlines the theoretical and methodological foundations of
Web analytics in order to make obvious the strengths and
shortcomings of Web analytics as an approach. These
foundational elements include the psychological basis in
behaviorism and methodological underpinning of trace data as an
empirical method. These foundational elements are illuminated
further through a brief history of Web analytics from the original
transaction log studies in the 1960s through the information
science investigations of library systems to the focus on Websites,
systems, and applications. Following a discussion of on-going
interaction data within the clickstream created using log files and
page tagging for analytics of Website and search logs, the lecture
then presents a Web analytic process to convert these basic data
to meaningful key performance indicators in order to measure
likely converts that are tailored to the organizational goals or
potential opportunities. Supplementary data collection techniques
are addressed, including surveys and laboratory studies. The
overall goal of this lecture is to provide implementable
information and a methodology for understanding Web analytics
in order to improve Web systems, increase customer satisfaction,
and target revenue through effective analysis of user–Website
interactions. Table of Contents: Understanding Web Analytics /
