The New Science of Retailing Marshall Fisher,Ananth Raman,2010-06-22 Retailers today are drowning in data but lacking in insight. They have so much information at their disposal that they struggle with both how to sort through it, and how to add science to their decision-making process without blunting the art that they correctly believe is a key ingredient of their success. This book reveals how retailers can use data to manage everything from strategic assortment planning, inventory management, and markdowns to improve store-level execution. This data-driven approach to the retail supply chain leads to far greater and faster inventory turns, far fewer and lower discounted goods and services, and better profit margins. The authors also tease out the personnel issues and the organizational implications of this approach.

The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education National Academies of Sciences, Engineering, and Medicine,Policy and Global Affairs,Board on Higher Education and Workforce,Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine,2018-07-21 In the United States, broad study in an array of different disciplines –arts, humanities, science, mathematics, engineering– as well as an in-depth study within a special area of interest, have been defining characteristics of a higher education. But over time, in-depth study in a major discipline has come to dominate the curricula at many institutions. This evolution of the curriculum has been driven, in part, by increasing specialization in the academic disciplines. There is little doubt that disciplinary specialization has helped produce many of the achievement of the past century. Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise, grappling with ever more specialized and fundamental problems. Yet today, many leaders, scholars, parents, and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos. These silos represent what many see as an artificial separation of academic disciplines. This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time. The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science, technology, engineering, mathematics, and medicine (STEMM) lead to improved educational and career outcomes for undergraduate and graduate students. It explores evidence regarding the value of integrating more STEMM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEMM education programs.

Music of a Thousand Years Ann E. Lucas,2019-10-22 A free open access ebook is available upon publication. Learn more at www.luminosoa.org. Iran's particular system of traditional Persian art music has been long treated as the product of an ever-evolving, ancient Persian culture. In *Music of a Thousand Years*, Ann E. Lucas argues that this music is a modern phenomenon indelibly tied to changing notions of Iran's national history. Rather than considering a single Persian music history, Lucas demonstrates cultural dissimilarity and discontinuity over time, bringing to light two different notions of music-making in relation to premodern and modern musical norms. An important corrective to the history of Persian music, *Music of a Thousand Years* is the first work to align understandings of Middle Eastern music history with current understandings of the region's political history.

Cities, Culture and Creativity UNESCO,World Bank (the),2021-05-25 Culture and creativity have untapped potential to deliver social, economic, and spatial benefits for cities and communities. Cultural and creative industries are key drivers of the creative economy and represent important sources of employment, economic growth, and innovation, thus contributing to city competitiveness and sustainability. Through their contribution to urban regeneration and sustainable urban development, cultural and creative industries make cities more attractive places for people to live in and for economic activity to develop. Culture and creativity also contribute to social cohesion at the neighborhood level, enable creative networks to form and advance innovation and growth, and create opportunities for those who are often socially and economically excluded. The ongoing COVID-19 pandemic has had a deep impact on the cultural sector, yet it has also revealed the power of cultural and creative industries as a resource for city recovery and resilience. More generally, cities are hubs of the creative economy and have a critical role to play in harnessing the transformative potential of cultural and creative industries through policies and enabling environments at the local level. 'Cities, Culture, and Creativity' (CCC) provides guiding principles and a CCC Framework, developed by UNESCO and the World Bank, to support cities in unlocking the power of cultural and creative industries for sustainable urban development, city competitiveness, and social inclusion. Drawing from global studies and the experiences of nine diverse cities from across the world, the CCC Framework offers concrete guidance for the range of actors -- city, state, and national governments; creative industry and related private-sector organizations; creatives; culture professionals and civil society-- to harness culture and creativity with a view to boosting their local creative economies and building resilient, inclusive, and dynamic cities.

Staying with the Trouble Donna J. Haraway,2016-08-19 In the midst of spiraling ecological devastation, multispecies feminist theorist Donna J. Haraway offers provocative new ways to reconfigure our relations to the earth and all its inhabitants. She eschews referring to our current epoch as the Anthropocene, preferring to conceptualize it as what she calls the Chthulucene, as it more aptly and fully describes our epoch as one in which the human and nonhuman are inextricably linked in

tentacular practices. The Chthulucene, Haraway explains, requires sym-poiesis, or making-with, rather than auto-poiesis, or self-making. Learning to stay with the trouble of living and dying together on a damaged earth will prove more conducive to the kind of thinking that would provide the means to building more livable futures. Theoretically and methodologically driven by the signifier SF—string figures, science fact, science fiction, speculative feminism, speculative fabulation, so far—Staying with the Trouble further cements Haraway's reputation as one of the most daring and original thinkers of our time.

Typeset in the Future Dave Addey,2018-12-11 A designer's deep dive into seven science fiction films, filled with "gloriously esoteric nerdery [and] observations as witty as they are keen" (Wired). In Typeset in the Future, blogger and designer Dave Addey invites sci-fi movie fans on a journey through seven genre-defining classics, discovering how they create compelling visions of the future through typography and design. The book delves deep into 2001: A Space Odyssey, Star Trek: The Motion Picture, Alien, Blade Runner, Total Recall, WALL·E, and Moon, studying the design tricks and inspirations that make each film transcend mere celluloid and become a believable reality. These studies are illustrated by film stills, concept art, type specimens, and ephemera, plus original interviews with Mike Okuda (Star Trek), Paul Verhoeven (Total Recall), and Ralph Eggleston and Craig Foster (Pixar). Typeset in the Future is an obsessively geeky study of how classic sci-fi movies draw us in to their imagined worlds.

Re-Imagining the Avant-Garde ,2019-07-10 The 1960s and 1970s avant-garde has been likened to an 'architectural Big Bang', such was the intensity of energy and ambition in which it exploded into the postwar world. Marked out by architectural projects that redefined the discipline, it remains just as influential today. References to the likes of Archizoom, Peter Eisenman, John Hejduk and Superstudio abound. Highly diverse, the avant-garde cannot be defined as a single strand or tendency. It was divergent geographically - reaching from Europe to North America and Japan - and in its political, formal and cultural preoccupations. It was unified, though, as a critical and experimental force, critiquing contemporary society against the backdrop of extreme social and political upheaval: the Paris riots of May 1968, the anti-Vietnam war movement in America and the looming ecological crisis. Re-imagining the Avant-garde outlines how in contemporary architectural practice, avant-garde projects retain their power as historical precedents, as barometers of a particular design ethos, as critiques of society and instigators of new formal techniques. Given the far-reaching impact of the subsequent digital revolution, which has since reshaped every aspect of practice, the issue asks why this historical period continues to retain its undeniable grip on current architecture. Contributors: Pablo Bronstein and Sam Jacob, Sarah Deyong, Stylianos Giamarellos, Damjan Jovanovic, Andrew Kovacs, Perry Kulper, Igor Marjanovic, William Menking, Michael Sorkin, Neil Spiller and Mimi Zeiger. Featured architects: Archizoom, Andrea Branzi, Jimenez Lai, Luis Miguel (Koldo) Lus Arana (Klaus), NEMESTUDIO, Superstudio and UrbanLab.

Connecting Families Carman Neustaedter, Steve Harrison, Abigail Sellen, 2012-08-28 New technologies are radically changing the way that families connect with one another: we can text our teenagers from work, eat dinner with far-away parents via video link, and instantly upload and share photos after a family day out. Whether we are bridging time or distance, and whether we are enhancing our closest relationships or strengthening the bonds of extended family, as computer technologies alter the communication landscape, they in turn are changing the way we conduct and experience family life. This state of the art volume explores the impact of new communication systems on how families interact – how they share their lives and routines, engage in social touch, and negotiate being together or being apart – by considering a range of different family relationships that shape the nature of communication. Composed of three sections, the first looks at what is often the core of a ‘family’, the couple, to understand the impact of technology on couple relationships, communication, and feelings of closeness. The second section studies immediate families that have expanded beyond just the individual or couple to include children. Here, the emphasis is on connection for communication, coordination, and play. The third section moves beyond the immediate family to explore connections between extended, distributed family members. This includes connections between adult children and their parents, grandparents and grandchildren, and adult siblings. Here family members have grown older, moved away from ‘home’, and forged new families. Researchers, designers and developers of new communication technologies will find this volume invaluable. Connecting Families: The Impact of New Communication Technologies on Domestic Life brings together the most up-to-date studies to help in understanding how new communication technologies shape – and are shaped by – family life, and offers inspiration and guidance for design by making clear what families need and value from technological systems.
