European Accountancy Yearbook 1992/93 Ellen Rocco,2012-12-06 European Accountancy Yearbook is the first annual reference work to focus on the emerging Pan-European accounting scene. Following numerous international mergers and syndicate formations large accountancy firms are competing to provide services to international corporations and businesses with cross-border trade. The Yearbook provides a one-stop reference source allowing financial directors of these companies to find out which accountancy firms are providing what services and where. It will also provide great assistance to other accountancy and financial services organisations to evaluate the state of the fast growing European market, and to assess competitors or possible partners. C Paul J. Deitel,Harvey M. Deitel,2016 For courses in computer programming C How to Program is a comprehensive introduction to programming in C. Like other texts of the Deitels' How to Program series, the book serves as a detailed beginner source of information for college students looking to embark on a career in coding, or instructors and software-development professionals seeking to learn how to program with C. Education System Design Brian Hudson,Marilyn Leask,Sarah Younie,2020-11-26 This book highlights decisions governments have to make about their public education systems, the options they have before them and the consequences of their decisions. As well as covering issues such as values, curriculum, teacher training, structures and so on, the book addresses education planning for epidemics, pandemics and disasters. Education systems provide the foundations for the future wellbeing of every society, yet existing systems are a point of global concern. Education System Design is a response to debates in developing and developed countries about the characteristics of a high-quality national education service. It questions what makes a successful system of education. With chapters that draw on experience in education systems around the world, each one considers an

element of a national education service and its role in providing a coherent and connected set of structures to ensure good education for all members of society. Key topics include: Existing education systems and what a future system might look like Inclusion and social justice Leadership and teacher education Policy options, and the consequences of policy changes This book suggests an education system be viewed as an ecosystem with interdependencies between many different components needing to be considered when change is contemplated. It is a vital book for any stakeholders in educational systems including students, teachers and senior leaders. It would be particularly useful to policy makers and those implementing policy changes.

C++ how to Program Paul J. Deitel,Harvey M. Deitel,2011 Late Objects Version: C++ How to Program, 7/e is ideal for Introduction to Programming (CS1) and other more intermediate courses covering programming in C++. Also appropriate as a supplement for upper-level courses where the instructor uses a book as a reference for the C++ language. This best-selling comprehensive text is aimed at readers with little or no programming experience. It teaches programming by presenting the concepts in the context of full working programs and takes a late objects approach. The authors emphasize achieving program clarity through structured and object-oriented programming, software reuse and component-oriented software construction. The Seventh Edition encourages students to connect computers to the community, using the Internet to solve problems and make a difference in our world. All content has been carefully fine-tuned in response to a team of distinguished academic and industry reviewers. The Late Objects Version delays coverage of class development until Chapter 9, presenting control statements, functions, arrays and pointers in a non-object-oriented, procedural programming context.

Tax Simplification Chris Evans, Richard E. Krever, Peter Mellor, 2015 Why are tax systems so complex? What are the causes of tax law complexity? What are the consequences? Why is tax simplification so difficult to achieve? These, and related questions, lie at the core of this volume on tax simplification featuring chapters by leading tax experts around the world. The quest for simplicity 'or at least some move towards simplification' has been a fixation of governments and others for many years, but little appears to have been achieved. Tax simplification is the most widely quoted but the least widely observed of the usually stated goals of policy (equity and efficiency being the others). It has been used (and abused) as a primary justification for tax reform over the last century, and typically it is seen as 'a good thing' -- 'to say that one is in favour of tax simplification is tantamount to stating that one is in favour of good as opposed to evil.

Maritime Security in Southern African Waters Thean Potgieter, Reiner Pommerin, 2009-01-01 Two thirds of the world population lies within 60 kilometres of the sea. Much of the well-being of our planet is dependent on the sea, as the bulk of international trade passes across oceans and through ports, while the sea is a rich source of protein and contains profound wealth in terms of energy and natural sources. Inevitably, economic stability and development are therefore closely linked to maritime security. This volume contains a selection of papers presented at an international conference on 'Maritime Security in Southern African Waters' in Stellenbosch on 22-23 July 2008.
