Military Entrepreneurs and the Spanish Contractor State in the Eighteenth Century Rafael Torres Sánchez, 2016-07-14 Military Entrepreneurs and the Spanish Contractor State in the Eighteenth Century offers a new approach to the relationship between warfare and state construction. Historians looking at how war funding impinged on state development, and how state growth made wars more significant, have tended to downplay the role of military-provisioning entrepreneurs. Written off as corrupt and selfish, these entrepreneurs jarred with the received view of a rationally growing and modernising state. This volume shows that the state-entrepreneur relationship was much more fluid and constant than previously thought. The state was not able to enforce a top-down military supply policy; at the same time it benefited from the entrepreneurs' collaboration and their shared mercantilist ambitions. The entrepreneurs' mobilisation of military supplies was crucial for extending state authority and helped to knit together national and colonial markets. But this fluid state-entrepreneur relationship gradually became shrouded in privileges and monopolies, not so much ideology driven or imposed by the entrepreneurs but rather as an arrangement exploited by the state to boost its control over them, whittling down middlemen and ensuring the solvency and creditworthiness of the chosen few. This arrangement spiralled into a risky inter-dependence and cramped entrepreneurial competition. Rafael Torres Sánchez furnishes new insights into the role of military entrepreneurs in debates about warfare and state construction.

Eugène Freyssinet Association pour la mémoire et le rayonnement des travaux d'Eugène Freyssinet,2004 Unassuming inventor, audacious builder, his extraordinary intuition regarding the behaviour of concrete, recently confirmed by the fine analysis of micromechanics has made Eugène Freyssinet one of the engineers who have most profoundly marked the construction world over the entire XXth century. In the earlier part of his career, he drove concrete to the limits of its strength in the arches of bridges, which broke record after record. Then, having found how to free himself from the deficiencies of concrete as a material, he invented prestressing which transformed it into that new material which revolutionised the art of construction. The technique of prestressed concrete has conquered the world and has outlived its inventor, but has covered up the name of the man, his convictions, and his message. To make him known through his works (numerous) and his writings (rare), such is the aim of this book. The reader will discover numerous examples of structures that illustrate both the extraordinary potential of concrete as a material and how the concept of prestressing has helped it to supplant steel, particularly in civil engineering structures. Yet, one will also find a man who was conscious of the social role of the engineer, sometimes waxing lyrical when contemplating a well-finished structure and forever imbued with a code of ethics which is perhaps his finest message for future generations.
