Making Things Up Karen Bennett,2017-05-19 A certain kind of talk is ubiquitous among both philosophers and so-called ordinary people: talk of one phenomenon generating or giving rise to another, or talk of one phenomenon being based in or constructed from another. For example, your computer screen is built of atoms in a complex configuration, and the picture on the screen is based in the local illumination of various individual pixels. Karen Bennett calls the family of relations invoked by such talk 'building relations'. Grounding is one currently popular such relation; so too are composition, property realization, and-controversially-causation. In chapters 2 and 3 Bennett argues that despite their differences, building relations form an interestingly unified family, and characterizes what all building relations have in common. In chapter 4 she argues that it's a mistake to think there is a strict divide between causal and noncausal determination. Chapters 5 and 6 turn to the connections between building and fundamentality. Bennett argues at length that both absolute and relative fundamentality are best understood in terms of building, and that to say that one thing is more fundamental than another is to say no more than that certain patterns of

building obtain. In chapter 7 Bennett argues that facts about what builds what must be themselves built: if a builds b, there is something in virtue of which that is the case. She also argues that the answer is a itself. Finally, in chapter 8 she defends an assumption that runs throughout the rest of the book, namely that there indeed are nonfundamental, built entities. Doing so involves substantive discussion about the scope of Ockham's Razor. Bennett argues that some nonfundamentalia are among the proper subject-matter of metaphysics, and thus that metaphysics is not best understood as the study of the fundamental nature of reality.

The Realization of Star Trek Technologies Mark E. Lasbury, 2016-08-24 As Star Trek celebrates its 50th anniversary, the futuristic tools of Kirk, Spock, Scott, and McCoy continue to come to life. This book merges Star Trek scientific lore—how the science of the time informed the implementation of technology in the series—and the science as it is playing out today. Scientists and engineers have

made and continue to develop replicators, teletransporters, tractor beams, and vision restoring visors. This book combines the vision of 1966 science fiction with the latest research in physics, biotechnology, and engineering.
