Creating Mashups with Adobe Flex and AIR Chris Korhonen, David Hassoun, 2008-04-01 Mashups are the integration of data from different sources to create one unified experience. Adobe's AIR (Adobe Integrated Runtime) platform is revolutionary in that it allows web developers to create applications using familiar technologies (such as Flex, Flash and HTML) but now they can deploy them on the desktop rather than having them locked to a web browser. This book covers mashups from a web designer and developer point of view, rather than a programmer. It covers everything from the basics and background of mashups to advanced functionality and integrating mashups with the desktop.

E-Commerce and Web Technologies Francesco Buccafurri, Giovanni Semeraro, 2010-08-26 After

the lesson learned during last years and following the successful edition of EC-Web 2009, for its 11th edition EC-Web tried to provide a clearer description of the electronic commerce universe focusing on some relevant topics. The main focus was not only on Internet-related techniques and approaches. The aim of EC-Web 2010 was to also cover aspects related to theoretical foundations of e-commerce, business processes as well as new approaches exploiting recently emerged technologies and scenarios such as the Semantic Web, Web services, SOA architectures, mobile and ubiquitous computing, just to cite a few. Due to their central role in any realistic e-commerce infrastructure, security and privacy issues were widely considered, without excluding legal and regulatory aspects. The choice of the above relevant topics directly reflects the fact that electronic commerce (EC), in the last few years, has changed and evolved into a well-established and founded reality both from a technological point of view and from a scientific one. Nevertheless, together with its evolution, new challenges and topics have emerged as well as new questions have been raised related to many aspects of EC. Keeping in mind the experience of the last edition of EC-Web, we maintained, for its 11th edition, the structure and the scientific organization of EC-Web 2009, aiming to highlight the autonomous role of the different (sometimes heterogeneous) aspects of EC, without missing their interdisciplinary scope.

Coopetition Saïd Yami, Sandro Castaldo, Battista Dagnino, Frédéric Le Roy, 2010-01-01 This book provides a diverse set of perspectives on the topic. It is very useful reading for anyone interested in understanding coopetition in multiple contexts. Devi R. Gnyawali, Virginia Tech, US As an original strategic management perspective, coopetition has hitherto been underexploited in analysing contemporary firm strategies and behaviours and, more generally, managerial practices and processes. This innovative book provides both theoretical insights and empirical evidence on coopetition. Coopetition shows great interpretive and normative potential and is likely to be an increasingly important tool. This book is one of the first key contributions in shaping and systematizing a novel coopetition agenda in the field of strategy. The book argues that coopetition is neither an extension of competition theory, nor an extension of cooperative theory. It is in fact a specific and distinctive research object, which calls for dedicated theoretical investigation to develop questions for theory, method, and managerial practice. This book provides both practitioners and academic scholars with a milestone that brings together an active community of researchers expressly mobilized around the creative in-depth scrutiny of coopetition. It will greatly appeal to researchers, scholars, and graduate students of management, business strategy competitive dynamics, and international business, as well as practitioners such as managers and consultants.
