*The Sarcophagi of the Sixth Continent* Yves Sente,2011 Graphic Novel. The latest book in the graphic novel series.

**The Cosmonaut Who Couldn't Stop Smiling** Andrew L. Jenks,2019-01-15 Let's go! With that, the boyish, grinning Yuri Gagarin launched into space on April 12, 1961, becoming the first human being to exit Earth's orbit. The twenty-seven-year-old lieutenant colonel departed for the stars from within the shadowy world of the Soviet military-industrial complex. Barbed wires, no-entry placards, armed guards, false identities, mendacious maps, and a myriad of secret signs had hidden Gagarin from prying outsiders—not even his friends or family knew what he had been up to. Coming less than four years after the Russians launched Sputnik into orbit, Gagarin's voyage was cause for another round of capitalist shock and Soviet rejoicing. The *Cosmonaut Who Couldn't Stop Smiling* relates this twentieth-century icon's remarkable life while exploring the fascinating world of Soviet culture. Gagarin's flight brought him massive international fame—in the early 1960s, he was possibly the most photographed person in the world, flashing his trademark smile while rubbing elbows with the varied likes of Nehru, Castro, Queen Elizabeth II, and Italian sex symbol Gina Lollobrigida. Outside of the spotlight, Andrew L. Jenks reveals, his tragic and mysterious death in a jet crash became fodder for morality tales and conspiracy theories in his home country, and, long after his demise, his life continues to provide grist for the Russian popular-culture mill. This is the story of a legend, both the official one and the one of myth, which reflected the fantasies, perversions, hopes and dreams of Gagarin's fellow Russians. With this rich, lively chronicle of Gagarin's life and times, Jenks recreates the elaborately secretive world of space-age Russia while providing insights into Soviet history that will captivate a range of readers.

**Little Sammy Sneeze** Winsor McCay,2007 Before his remarkable *Little Nemo in Slumberland*, McCay created two strips starring young children. Today, Winsor McCay (1867-1934) is universally acknowledged as the first master of both the comic strip and the animated cartoon. Although invented by others, both genres were developed into enduring popular art of the highest imagination through McCay's innovative genius. From the publishers of the widely-acclaimed deluxe reprint *Little Nemo In Slumberland: So Many Splendid Sundays*, this book features all of the *Little Sammy Sneeze* color pages (1904-05) plus *Hungry Henrietta*, McCay's other comic, which appeared on the back of *Sammy* in the *Sunday New York Herald*. The unique style of this book presents two other flipside comics of 1904: *The Woozlebeasts* and *The Upside Downs*, along with the complete 27-chapter saga of *Hungry Henrietta*. All comics are digitally restored in the original size and colors.

**The International Handbook of Space Technology** Malcolm Macdonald,Viorel Badescu,2014-07-08 This comprehensive handbook provides an overview of space technology and a holistic understanding of the system-of-systems that is a modern spacecraft. With a foreword by Elon Musk, CEO and CTO of SpaceX, and contributions from globally leading agency experts from NASA, ESA, JAXA, and CNES, as well as European and North American academics and industrialists, this handbook, as well as giving an interdisciplinary overview, offers, through individual self-contained chapters, more detailed understanding of specific fields, ranging through: · Launch systems, structures, power, thermal, communications, propulsion, and software, to · entry, descent and landing, ground segment, robotics, and data systems, to · technology management, legal and regulatory issues, and project management. This handbook is an equally invaluable asset to those on a career path towards the space industry as it is to those already within the industry.

**Introduction to Rocket Technology** V. I. Feodosiev,G. B. Siniarev,2014-05-12 *Introduction to Rocket Technology* focuses on the dynamics, technologies, aerodynamics, ballistics, theory of servomechanisms, principles of navigation instruments, and electronics involved in rocket technology. The publication first takes a look at the basic relationships in the theory of reactive motion; types of jet propelled aircraft and their basic construction; and types of reaction motors and their construction. Discussions focus on air breathing motors, anti-aircraft rockets, long range bombardment rockets, surface to surface, short range bombardment missiles, thrust of a rocket motor, and operating efficiency of a rocket motor. The text then examines rocket motor fuels and processes in the combustion chamber of a rocket motor. The manuscript ponders on the flow of combustion products through the nozzle of a rocket motor and forces and moments acting on the rocket in flight. Topics include stabilizing and damping moments, steering forces, aerodynamic forces, properties of supersonic nozzle, gas flow in a supersonic nozzle, cooling of liquid rocket motors, and basic laws of gas flow. The book then elaborates on rocket flight trajectory, basic principles of stabilization and steering, and ground equipment and launching devices. The publication is a valuable source of information for engineers and researchers interested in rocket technology.

**To a Distant Day** Chris Gainor,2008-01-01 ?Insightful, instructive, and definitely worth the read.??Greg Andres, *Journal of the Royal Astronomical Society of Canada* ?As someone who has been teaching a course on space exploration for many years and has visited most of NASA's space centers, I have found plenty of new and valuable material in *To a Distant Day*. . . . I recommend the book to all who wish to know more about the conditions, people, and discoveries between 1890 and 1960 that led to the space age.??Pangratos Papacosta, *Physics Today* Although the dream of flying is as old as the human imagination, the notion of rocketing into space may have originated with Chinese gunpowder experiments during the Middle Ages. Rockets as both weapons and entertainment are examined in this engaging history of how human beings acquired the ability to catapult themselves into space. Chris Gainor's irresistible narrative introduces us to pioneers such as Konstantin Tsiolkovsky, Robert Goddard, and Hermann Oberth, who pointed the way to the cosmos by generating the earliest wave of international enthusiasm for space exploration. It shows us German engineer Wernher von Braun creating the V-2, the first large rocket, which, though opening the door to space, failed utterly as the ?wonder weapon? it was meant to be. From there Gainor follows the space race to the Soviet Union and the United States, giving us a close look at the competitive hysteria that led to Sputnik, satellites, space probes, and?finally?human flight into space in 1961. As much a story of cultural ambition and personal destiny as of scientific progress and technological history, *To a Distant Day* offers a complete and thoroughly compelling account of humanity's determined efforts?sometimes poignant, sometimes amazing, sometimes mad?to leave the earth behind.

**The Shawinigan Fox: How Jean Chrétien Defied the Elites and Reshaped Canada** Bob Plamondon,2017-10-18 Jean Chrétien's critics have said he was a man with no vision and a short attention span – a small-town hick who stumbled his way to become Canada's 20th prime minister. Whatever credit the Chrétien government deserved was often given to Paul Martin, the heir apparent who was touted to be the brains behind the operation. But while Chretien was the subject of ridicule, he was quietly giving his competitors – both inside and outside of the Liberal party – a master class in politics, leadership and nation-building. His decisions, which often ran counter to elite opinion, fundamentally reshaped and strengthened Canada as it entered the 21st century. Chrétien restored sanity to government finances, kept Canada out of the Iraq war, turned a brain drain into a brain gain, and established clarity over national unity. Relying on new evidence, detailed analysis and exclusive interviews with former cabinet ministers, provincial premiers, political staff, strategists, and high-ranking bureaucrats – many of them speaking publicly for the first time – bestselling author and historian Bob Plamondon tells the surprising inside story of the Chretien years, including: what Chretien would have done if the 1995 referendum had ended in a vote for separation; why Paul Martin secretly threatened to resign in 1995, seven years before he actually quit; who tried to convince Chretien to join the Iraq war and why he could not be intimidated into joining the US-led coalition; why a lifelong Liberal was the most conservative prime minister in Canadian history; the shocking details of the Chretien-Martin feud and the only time an elected Canadian prime minister has been overthrown Until now, the story of Chretien's time as prime minister has been largely misunderstood. Plamondon sets the record straight and provides compelling lessons about political leadership and problem-solving from a critical chapter in Canadian history.

**The Rocket and the Reich** Michael J. Neufeld,2013-09-10 WINNER OF THE DEXTER PRIZE OF THE SOCIETY FOR THE HISTORY OF TECHNOLOGY Launched by the Third Reich in late 1944, the first ballistic missile, the V-2, fell on London, Paris, and Antwerp after covering nearly two hundred miles in five minutes. It was a stunning achievement, one that heralded a new age of ballistic missiles and space launch vehicles. Michael J. Neufeld gives the first comprehensive and accurate account of the story behind one of the greatest engineering feats of World War II. At a time when rockets were minor battlefield weapons, Germany ushered in a new form of warfare that would bequeath a long legacy of terror to the Cold War, as well as the means to go into space. Both the US and USSR's rocket programs had their origins in the Nazi state.

**The Rocket into Planetary Space** Hermann Oberth,2014-10-22 For all being interested in astronautics, this translation of Hermann Oberth's classic work is a truly historic event. Readers will be impressed with this extraordinary pioneer and his incredible achievement. In a relatively short

work of 1923, Hermann Oberth laid down the mathematical laws governing rocketry and spaceflight, and he offered practical design considerations based on those laws.

The Problem with Space Travel Herman Noordung,1995-03 A translation from German of a 1929 treatise by the author. Deals with the problem of the space travel. Expresses ideas about rocketry and space travel. Extensive treatment of the engineering aspects of a space station. Extensive bibliography. 100 drawings.

*The Spacesuit Film* Gary Westfahl,2012-03-27 Filmmakers employ various images to suggest the strangeness of outer space, but protective spacesuits most powerfully communicate its dangers and the frailty of humans beyond the cradle of Earth. (Many films set in space, however, forgo spacesuits altogether, reluctant to hide famous faces behind bulky helmets and ill-fitting jumpsuits.) This critical history comprehensively examines science fiction films that portray space travel realistically (and sometimes not quite so) by having characters wear spacesuits. Beginning [A] with the pioneering Himmelskibet (1918) and Woman on the Moon (1929), it discusses [B] other classics in this tradition, including Destination Moon (1950), Riders to the Stars (1954), and 2001: A Space Odyssey (1968); [C] films that gesture toward realism but betray that goal with melodramatic villains, low comedy, or improbable monsters; [D] the distinctive spacesuit films of Western Europe, Russia and Japan; and [E] America's spectacular real-life spacesuit film, the televised Apollo 11 moon landing (1969).

**This New Ocean** William E. Burrows,2010-09-29 It was all part of man's greatest adventure--landing men on the Moon and sending a rover to Mars, finally seeing the edge of the universe and the birth of stars, and launching planetary explorers across the solar system to Neptune and beyond. The ancient dream of breaking gravity's hold and taking to space became a reality only because of the intense cold-war rivalry between the superpowers, with towering geniuses like Wernher von Braun and Sergei Korolyov shelving dreams of space travel and instead developing rockets for ballistic missiles and space spectacles. Now that Russian archives are open and thousands of formerly top-secret U.S. documents are declassified, an often startling new picture of the space age emerges: the frantic effort by the Soviet Union to beat the United States to the Moon was doomed from the beginning by gross inefficiency and by infighting so treacherous that Winston Churchill likened it to dogs fighting under a carpet; there was more than science behind the United States' suggestion that satellites be launched during the International Geophysical Year, and in one crucial respect, Sputnik was a godsend to Washington; the hundred-odd German V-2s that provided the vital start to the U.S. missile and space programs legally belonged to the Soviet Union and were spirited to the United States in a derring-do operation worthy of a spy thriller; despite NASA's claim that it was a civilian agency, it had an intimate relationship with the military at the outset and still does--a distinction the Soviet Union never pretended to make; constant efforts to portray astronauts and cosmonauts as Boy Scouts were often contradicted by reality; the Apollo missions to the Moon may have been an unexcelled political triumph and feat of exploration, but they also created a headache for the space agency that lingers to this day. This New Ocean is based on 175 interviews with Russian and American scientists and engineers; on archival documents, including formerly top-secret National Intelligence Estimates and spy satellite pictures; and on nearly three decades of reporting. The impressive result is this fascinating story--the first comprehensive account--of the space age. Here are the strategists and war planners; engineers and scientists; politicians and industrialists; astronauts and cosmonauts; science fiction writers and journalists; and plain, ordinary, unabashed dreamers who wanted to transcend gravity's shackles for the ultimate ride. The story is written from the perspective of a witness who was present at the beginning and who has seen the conclusion of the first space age and the start of the second.

**Atmospheric Science at NASA** Erik M. Conway,2008-12-08 Honorable Mention, 2008 ASLI Choice Awards. Atmospheric Science Librarians International This book offers an informed and revealing account of NASA's involvement in the scientific understanding of the Earth's atmosphere. Since the nineteenth century, scientists have attempted to understand the complex processes of the Earth's atmosphere and the weather created within it. This effort has evolved with the development of new technologies—from the first instrument-equipped weather balloons to multibillion-dollar meteorological satellite and planetary science programs. Erik M. Conway chronicles the history of atmospheric science at NASA, tracing the story from its beginnings in 1958, the International Geophysical Year, through to the present, focusing on NASA's programs and research in meteorology, stratospheric ozone depletion, and planetary climates and global warming. But the story is not only a scientific one. NASA's researchers operated within an often politically contentious environment. Although environmental issues garnered strong public and political support in the 1970s, the following decades saw increased opposition to environmentalism as a threat to free market capitalism. Atmospheric Science at NASA critically examines this politically controversial science, dissecting the often convoluted roles, motives, and relationships of the various institutional actors involved—among them NASA, congressional appropriation committees, government weather and climate bureaus, and the military.

**Red Cosmos** James T. Andrews,2009 Often called the grandfather of Russian rocketry, K. E. Tsiolkovskii first conceived of multi-stage rockets that would later be adapted as the basis of both the U.S. and Soviet rocket programs. Mining a myriad of Russian archives, Andrews produces a study of Soviet technological propaganda, local science education, public culture in the 1920s and 1930s, and the cultural ramifications of space flight.

**The Red Rockets' Glare** Asif A. Siddiqi,2010-02-26 An academic study on the birth of the Soviet space program, situating the birth of cosmic enthusiasm within Russian and Soviet history.

**Architecture for Astronauts** Sandra Häuplik-Meusburger,2011-10-18 Living and working in extra-terrestrial habitats means being potentially vulnerable to very harsh environmental, social, and psychological conditions. With the stringent technical specifications for launch vehicles and transport into space, a very tight framework for the creation of habitable space is set. These constraints result in a very demanding “partnership” between the habitat and the inhabitant. This book is the result of researching the interface between people, space and objects in an extra-terrestrial environment. The evaluation of extra-terrestrial habitats in comparison to the user's perspective leads to a new framework, comparing these buildings from the viewpoint of human activity. It can be used as reference or as conceptual framework for the purpose of evaluation. It also summarizes relevant human-related design directions. The work is addressed to architects and designers as well as engineers.

**Books and Plays in Films, 1896-1915** Denis Gifford,1991 This is the world's first catalogue of cinematograph films adapted from literary, artistic and other media sources for the period 1896 through 1915: the first twenty years of motion pictures. It includes novels, plays, non-fiction books, short stories, biographies, poems,operas, songs, cartoons and comic strips. The main arrangement is by author/creator, whose 861 names are arranged alphabetically, under which the film adaptations are listed chronologically. This book relates only to silent pictures, of course, and as production and distribution was global at the time, films are included from the United States, the United Kingdom, France, Germany, Italy, Australia, Canada, Scandinavia, Japan and other countries. A checklist of the 239 film companies included will be found as an appendix in the back of the book.

*The Final Journey of the Saturn V* Andrew R. Thomas,Paul Thomarios,2012 The Saturn V rocket carried men to the moon, and its history reflects the US space program's rise, success and demise. In 1961, John F. Kennedy challenged America to put a man on the moon and win the space race. Neil Armstrong set foot on the moon in 1969 as the culmination of a concerted scientific and technological effort. A little over a decade later, the Saturn rocket was tossed aside to rot in a field near the Kennedy Space Center in Florida. The rocket's carcass became the home to flora and fauna. Like the space program itself, the rocket was forgotten. Finally in the mid 1990s, supported by the Smithsonian Institute, the Saturn V was brought back to life. Leading the restoration was Paul Thomarios, the son of Greek immigrants. The reconditioning of the rocket is part of the story, but the story is also that of Thomarios. This book details both, showing how pride and dedication made the Saturn rocket and Paul Thomarios.

Rockets Through Space Philip Ellaby Cleator,1936
