Information Technology Law in Australia George Cho,2023-01-20 Derived from the renowned multi-volume International Encyclopaedia of Laws, this practical guide to information technology law – the law affecting information and communication technology (ICT) – in Australia covers every aspect of the subject, including the regulation of digital markets, intellectual property rights in the digital context, relevant competition rules, drafting and negotiating ICT-related contracts, electronic transactions, and cybercrime. Lawyers who handle transnational matters will appreciate the detailed explanation of specific characteristics of practice and procedure. Following a general introduction, the monograph assembles its information and guidance in six main areas of practice: (1) the regulatory framework of digital markets, including legal aspects of standardization, international private law applied to the online context, telecommunications law, regulation of audio-visual services and online commercial platforms; (2) online public services including e-government, e-health and online voting; (3) contract law with regard to software, hardware, networks and related services, with special attention to case law in this area, rules with regard to electronic evidence, regulation of electronic signatures, online financial services and electronic commerce; (4) software protection, legal protection of databases or chips, and other intellectual property matters; (5) the legal framework regarding cybersecurity and (6) the application of criminal procedure and substantive criminal law in the area of cybercrime. Its succinct yet scholarly nature, as well as the practical quality of the information it provides, make this monograph a valuable time-saving tool for business and legal professionals alike. Lawyers representing parties with interests in Japan will welcome this very useful guide, and academics and researchers will appreciate its value in the study of comparative law in this relatively new and challenging field.

Saving the News Martha Minow,2021-06-15 A detailed argument of how our government has interfered in the direction of America's media landscape that traces major transformations in media since the printing press and charts a path for reform. In Saving the News, Martha Minow takes stock of the new media landscape. She focuses on the extent to which our constitutional system is to blame for the current parlous state of affairs and on our government's responsibilities for alleviating the problem. As Minow shows, the First Amendment of the US Constitution assumes the existence and durability of a private industry. Although the First Amendment does not govern the conduct of entirely private enterprises, nothing in the Constitution forecloses government action to regulate concentrated economic power, to require disclosure of who is financing communications, or to support news initiatives where there are market failures. Moreover, the federal government has contributed financial resources, laws, and regulations to develop and shape media in the United States. Thus, Minow argues that the transformation of media from printing presses to the internet was shaped by deliberate government policies that influenced the direction of private enterprise. In short, the government has crafted the direction and contours of America's media ecosystem. Building upon this basic argument, Minow outlines an array of reforms, including a new fairness doctrine, regulating digital platforms as public utilities, using antitrust authority to regulate the media, policing fraud, and more robust funding of public media. As she stresses, such reforms are not merely plausible ideas; they are the kinds of initiatives needed if the First Amendment guarantee of freedom of the press continues to hold meaning in the twenty-first century.
