Tactile Display for Virtual 3D Shape Rendering Alessandro Mansutti,Mario Covarrubias Rodriguez,Monica Bordegoni,Umberto Cugini,2017-02-15 This book describes a novel system for the simultaneous visual and tactile rendering of product shapes which allows designers to simultaneously touch and see new product shapes during the conceptual phase of product development. This system offers important advantages, including potential cost and time savings, compared with the standard product design process in which digital 3D models and physical prototypes are often repeatedly modified until an optimal design is achieved. The system consists of a tactile display that is able to represent, within a real environment, the shape of a product. Designers can explore the rendered surface by touching curves lying on the product shape, selecting those curves that can be considered style features and evaluating their aesthetic quality. In order to physically represent these selected curves, a flexible surface is modeled by means of servo-actuated modules controlling a physical deforming strip. The tactile display is designed so as to be portable, low cost, modular, and high performing in terms of the types of shape that it can represent.

Now, you can learn to create AR prototypes using 3D data, Processing open-source programming language, and other languages. This unique book is an easy-to-follow guide on how to do it. Guides you through the emerging technology of Augmented Reality (AR) Shows you how to use 3D data with the Processing programming environment and other languages to create AR prototypes for the web, smartphones, Macs, and PCs Helps 3D artists and designers who want to move into the AR market but don't have programming skills Covers the essentials of 3D programming, creating objects for an AR library, building and exporting 3D models, and much more Explains how to interactively link 3D to physical, virtual, and streaming environments Author Tony Mullen is both an artist and a programmer and perfectly suited to explain how to bridge these two worlds, as he so deftly does in *Prototyping with Augmented Reality*.
