Organizational Resource Management Jussi Kantola,2015-11-05 The management of organizational resources is extremely difficult. Managers face serious and complex challenges when managing the required resources for the benefit of their organization. This book presents a unique approach that aims to tackle these management challenges. This approach is based on four propositions that together form a solid frame

Civilizational Imperatives Oliver Charbonneau,2020-09-15 In *Civilizational Imperatives*, Oliver Charbonneau reveals the little-known history of the United States' colonization of the Philippines' Muslim South in the early twentieth century. Often referred to as Moroland, the Sulu Archipelago and the island of Mindanao were sites of intense US engagement and laboratories of colonial modernity during an age of global imperialism. Exploring the complex relationship between colonizer and colonized from the late nineteenth century until the eve of the Second World War, Charbonneau argues that American power in the Islamic Philippines rested upon a transformative vision of colonial rule. Civilization, protection, and instruction became watchwords for US military officers and civilian administrators, who enacted fantasies of racial reform among the diverse societies of the region. Violence saturated their efforts to remake indigenous politics and culture, embedding itself into governance strategies used across four decades. Although it took place on the edges of the Philippine colonial state, this fraught civilizing mission did not occur in isolation. It shared structural and ideological connections to US settler conquest in North America and also borrowed liberally from European and Islamic empires. These circuits of cultural, political, and institutional exchange—accessed by colonial and anticolonial actors alike—gave empire in the Southern Philippines its hybrid character. *Civilizational Imperatives* is a story of colonization and connection, reaching across nations and empires in its examination of a Southeast Asian space under US sovereignty. It presents an innovative new portrait of the American empire's global dimensions and the many ways they shaped the colonial encounter in the Southern Philippines.

Structural Analysis of Printed Circuit Board Systems Peter A. Engel,2012-12-06 This book discusses the building blocks of electronic circuits - the microchips, transistors, resistors, condensers, and so forth, and the boards that support them - from the point of view of mechanics: What are the stresses that result from thermal expansion and contraction? What are the elastic parameters that determine whether a component will survive a certain acceleration? After an introduction to the elements of structural analysis and finite-element analysis, the author turns to components, data and testing. A discussion of leadless chip carriers leads to a detailed thermal analysis of pin grid arrays. For compliant leaded systems, both mechanical (bending and twisting) and thermal stresses are discussed in detail. The book concludes with discussions of the dynamic response of circuit cards, plated holes in cards and boards, and the final assembly of cards and boards.

M103 Heavy Tank 1950-74 Kenneth W Estes,2013-03-20 The T43 design represented the pinnacle of U.S. Army tank engineering of the late 1940s. The heavy tank proved fairly popular with its crews, who above all respected the powerful armament it carried. The outbreak of war in Korea brought a rush order in December 1950 which led to a complete production run of 300 vehicles. After 1951, the Marine Corps alone retained confidence in the heavy tank program, investing its scarce funds in the improvements necessary to bring about its fielding after a hurried production run in midst of the 'tank crisis' of the year 1950-51. The eventual retirement of the M103 in 1972, over 20 years after manufacture and after 14 years of operational service, demonstrated the soundness of its engineering. It may have been the unwanted 'ugly duckling' of the Army, which refrained from naming the M103 alone of all its postwar tanks. For the Marine Corps, it served the purpose defined for it in 1949 until the automotive and weapons technology of the United States could produce viable alternatives.

In Afghanistan David Loyn,2009-06-23 Afghanistan has been a strategic prize for foreign empires for more than 200 years. The British, Russians, and Americans have all fought across its beautiful and inhospitable terrain, in conflicts variously ruthless, misguided and bloody. This violent history is the subject of David Loyn's magisterial book. It is a history littered with misunderstandings and broken promises, in which the British, the Russians, and later the Americans, constantly underestimated the ability of the Afghans. In Afghanistan brilliantly brings to life the personalities involved in Afghanistan's relationship with the world, chronicling the misunderstandings and missed opportunities that have so often led to war. With 30 years experience as a foreign correspondent, David Loyn has had a front-row seat during Afghanistan's recent history. In Afghanistan draws on David Loyn's unrivalled knowledge of the Taliban and the forces that prevail in Afghanistan, to provide the definitive analysis of the lessons these conflicts have for the present day.

US Military Innovation Since the Cold War Harvey Sapolsky,Benjamin Friedman,Brendan Green,2009-04-28 This book explains how the US military reacted to the 'Revolution in Military Affairs' (RMA), and failed to innovate its organization or doctrine to match the technological breakthroughs it brought about. Many called for the transformation of the US military in the years after the end of the Cold War, seeking the changes in organization and doctrine that would complete the RMA innovation and a commitment to counter-insurgency, peace keeping and nation building missions. This volume describes the origins, uses, and limits of the RMA technologies, examines how each of the five US armed services (categorising the Special Operations as a separate service) made their adjustments both to the technologies and the use of force, and how the role of the civilian officials and the defense industry altered in this process of change and avoidance of change. The book examines the internal politics of the services as well as civil/military relations to identify the external pressures on the services for significant change in their doctrine and weapons. Many have noted the failure of the services to innovate in what can be called the 'Second Inter-war Period' (the years after the Cold War). This book offers explanations for this failure and arguments about the possible range and desirability of military innovation in the post-Cold war era. This book will be of great interest to students of strategic studies, US defence politics, military studies, and US politics. Harvey M. Sapolsky is Professor of Public Policy and Organization in

the Department of Political Science at MIT and former Director of the Security Studies Program. Benjamin H. Friedman is a Research Fellow in Defense and Homeland Security Studies at the Cato Institute and a Ph.D. Candidate in Political Science at MIT. Atomic Force Microscopy Wesley C. Sanders, 2019-10-08 This book focuses primarily on the atomic force microscope and serves as a reference for students, postdocs, and researchers using atomic force microscopes for the first time. In addition, this book can serve as the primary text for a semester-long introductory course in atomic force microscopy. There are a few algebra-based mathematical relationships included in the book that describe the mechanical properties, behaviors, and intermolecular forces associated with probes used in atomic force microscopy. Relevant figures, tables, and illustrations also appear in each chapter in an effort to provide additional information and points of interest. This book includes suggested laboratory investigations that provide opportunities to explore the versatility of the atomic force microscope. These laboratory exercises include opportunities for experimenters to explore force curves, surface roughness, friction loops, conductivity imaging, and phase imaging.
