Events Tourism Violet V. Cuffy,Fiona Bakas,Willem J. L. Coetzee,2020-10-29 This book presents critical insights and contemporary perspectives for exploring current trends, concerns and prospects of events tourism. It examines modern-day global issues facing the events and tourism industry, policymakers, researchers and academics to advance understanding of practice and development of theory. Organised in four parts, this book examines how events tourism is designed, planned and delivered. The first part engages with the core, fundamental concepts of events tourism which establish a basic understanding of the field. The second part addresses contemporary issues related to visitor attractions, music festivals, small and user-generated events, wanderlust and entrepreneurship. The third part focuses on meetings and challenges in the conference industry after disasters, the economic impact and other dilemmas of mega-events, and city and destination concerns. The fourth and final part provides a peek into the future of events tourism vis-à-vis reshaping cities, music festivals and critical dilemmas of the 21st century. With an international appeal because of cross-national contributions, this book will interest events and tourism practitioners, academics, students, researchers, policymakers, and business and investment sector professionals across the globe.

Studies on Gersonides Gad Freudenthal,2023-11-27 R. Levi ben Gershom (Gersonides, 1288-1344) is one of the greatest and most original figures of Medieval Jewish thought. He wrote numerous works in philosophy, science and biblical exegesis. Some of his scientific works, most notably his highly innovative Astronomy, were translated from Hebrew into Latin and could thus reach non-Jewish scholars. The twelve studies collected in this bilingual volume (English and French in equal parts) offer for the first time a comprehensive overview and assessment of Gersonides' work in astronomy, mathematics, logic, natural science, and psychology. Gersonides' contributions are analyzed within the context of contemporary philosophy and science in Hebrew, Arabic, and Latin. New light is also shed on the reception of Gersonides' work within European science. The volume includes a very extensive bibliography of writings by and about Gersonides. From the contents: Part I: Gersonides' Astronomy: Bernard R. Goldstein, José Luis Mancha, José Chabas, Henri Hugonnard-Roche, Guy Beaujouan. Part II: Gersonides' Work in Mathematics: Tony Lévy, Karine Chemla, Serge Pahaut. Part III: Gersonides' Science in Its Relations to His Philosophy and Theology: Herbert A. Davidson, Tzvi Y. Langermann, Charles H. Manekin, Amos Funkenstein, Gad Freudenthal.

The reader is referred to the reviews by SUTTON [22], [23] and PRIESTLEY and SHEP PARD [15] for further details concerning eddy-flux of heat and turbulent diffusion. 19. RICHARDSON'S criterion. France, Official Standard Names Approved by the United States Board on Geographic Names ,1964 Nearly the whole of America's partisan politics centers on a single question: Can markets solve our social problems? And for years this question has played out ferociously in the debates about how we should educate our children. From the growth of vouchers and charter schools to the implementation of No Child Left Behind, policy makers have increasingly turned to market-based models to help improve our schools, believing that private institutions--because they are competitively driven--are better than public ones. With The Public School Advantage, Christopher A. and Sarah Theule Lubiencki offer powerful evidence to undercut this belief, showing that public schools in fact out-perform private ones.
