Pretty Liar Natalie Khazaal, 2018-11-15 How did a new, irresistible brand of television emerge from the Lebanese Civil War (1975–91) to conquer the Arab region in the satellite era? What role did seductive news anchors, cool language teachers, superheroes, and gossip magazines play in negotiating a modern relationship between television and audiences? How did the government lose its television monopoly to sectarian militias? *Pretty Liar* tells the untold story of the coevolution of Lebanese television and its audience, and the ways in which the Civil War of 1975–91 influenced that transformation. Based on empirical data, Khazaal explores the rise of language and gender politics in Lebanese television and the storm of controversy during which these issues became a referendum on television's relevance. This groundbreaking book challenges the narrow focus on present-day satellite television and social media, offering the first account of how broadcast television transformed media legitimacy in the Arab world. With its analysis of news, entertainment, and educational shows from Télé Liban and LBC, novels, periodicals, and popular culture, *Pretty Liar* demonstrates how television became a site for politics and political resistance, feminism, and the cradle of the postwar Lebanese culture. The history of television in Lebanon is not merely a record of corporate technology but the saga of a people and their continuing demand for responsive media during times of civil unrest.

Frontiers in New Media Research Francis L.F. Lee, Louis Leung, Jack Linchuan Qiu, Donna S.C. Chu, 2013-05-07 This volume puts together the works of a group of distinguished scholars and active researchers in the field of media and communication studies to reflect upon the past, present, and future of new media research. The chapters examine the implications of new media technologies on everyday life, existing social institutions, and the society at large at various levels of analysis. Macro-level analyses of changing techno-social formation – such as discussions of the rise of surveillance society and the fifth estate – are combined with studies on concrete and specific new media phenomena, such as the rise of Pro-Am collaboration and fan labor online. In the process, prominent concepts in the field of new media studies, such as social capital, displacement, and convergence, are critically examined, while new theoretical perspectives are proposed and explicated. Reflecting the interdisciplinary nature of the field of new media studies and communication research in general, the chapters interrogate into the problematic through a range of theoretical and methodological approaches. The book should offer students and researchers who are interested in the social impact of new media both critical reviews of the

existing literature and inspirations for developing new research questions.

Progress in the Chemistry of Organic Natural Products 108 A. Douglas Kinghorn, Heinz Falk, Simon Gibbons, Jun'ichi Kobayashi, Yoshinori Asakawa, Ji-Kai Liu, 2019-03-28 The first contribution summarizes current trends in research on medicinal plants in Mexico with emphasis on work carried out at the authors' laboratories. The most relevant phytochemical and pharmacological profiles of a selected group of plants used widely for treating major national health problems are described. The second contribution provides a detailed survey of the so far reported literature data on the capacities of selected oxyprenylated phenylpropanoids and polyketides to trigger receptors, enzymes, and other types of cellular factors for which they exhibit a high degree of affinity and therefore evoke specific responses. And the third contribution discusses aspects of endophytic actinobacterial biology and chemistry, including biosynthesis and total synthesis of secondary metabolites produced in culture. It also presents perspectives for the future of microbial biodiscovery, with emphasis on the secondary metabolism of endophytic actinobacteria.

Waves in Neural Media Paul C. Bressloff, 2013-10-17 □Waves in Neural Media: From Single Neurons to Neural Fields surveys mathematical models of traveling waves in the brain, ranging from intracellular waves in single neurons to waves of activity in large-scale brain networks. The work provides a pedagogical account of analytical methods for finding traveling wave solutions of the variety of nonlinear differential equations that arise in such models. These include regular and singular perturbation methods, weakly nonlinear analysis, Evans functions and wave stability, homogenization theory and averaging, and stochastic processes. Also covered in the text are exact

methods of solution where applicable. Historically speaking, the propagation of action potentials has inspired new mathematics, particularly with regard to the PDE theory of waves in excitable media. More recently, continuum neural field models of large-scale brain networks have generated a new set of interesting mathematical questions with regard to the solution of nonlocal integro-differential equations. Advanced graduates, postdoctoral researchers and faculty working in mathematical biology, theoretical neuroscience, or applied nonlinear dynamics will find this book to be a valuable resource. The main prerequisites are an introductory graduate course on ordinary differential equations or partial differential equations, making this an accessible and unique contribution to the field of mathematical biology.

Living Donor Organ Transplantation Rainer W.G. Gruessner, Enrico Benedetti, 2024-01-26 Living Organ Donor Transplantation, Second Edition puts the entire discipline in perspective while guiding readers step-by-step through the most common organ transplant surgeries. Anesthesia and Perioperative Care for Organ Transplantation Kathirvel Subramaniam, Tetsuro Sakai, 2016-11-01 This comprehensive textbook, covering all aspects of the perioperative management of patients undergoing organ transplantation, serves as the standard reference for clinicians who care for transplant patients on a day-to-day basis as well as those who encounter organ transplantation only occasionally in their clinical practice. Anesthesia and Perioperative Care for Organ Transplantation covers transplantation of the heart, lung, liver, pancreas, and kidney, as well as multivisceral and composite tissue graft transplantations. For each kind of transplantation, the full spectrum of perioperative considerations is addressed: preoperative preparation, intraoperative anesthesia management, surgical techniques, and postoperative care. Each chapter contains evidence-based recommendations, relevant society guidelines, management algorithms, and institutional protocols as tables, flow diagrams, and figures. Photographs demonstrating surgical techniques, anesthesia procedures, and perfusion management are included. Anesthesia and Perioperative Care for Organ Transplantation is for anesthesiologists and

critical care physicians; transplantation surgeons; nurse anesthetists; ICU nurses; and trainees.□□

Diffusion in Gases and Porous Media Roberto Cunningham,2013-06-29 The world we live in exhibits, on different scales, many phenomena related to the diffusion of gases. Among them are the movement of gases in earth strata, the aeration of soils, the drying of certain materials, some catalytic reactions, purification by adsorption, isotope separation, column chromatography, cooling of nuclear reactors, and the permeability of various packing materials. The evolution of the understanding of this subject has not always been straightforward and progressive- there has been much confusion and many doubts and misunderstandings, some of which remain to this day. The main reason for the difficulties in the development of this subject is, we now know, the lack of an understanding of the effects of walls on diffusing systems. Textbooks usually treat diffusion on two levels: at the physicochemical or molecular level, making use of the kinetic theory of gases (which while a very rigorous and well-founded theory nevertheless is valid only for systems without walls), or at the level of a transport phenomenon, a level geared toward applications. The influence of walls is usually disregarded or is treated very briefly (for example, by taking account of the Knudsen regime or by introducing a transition regime of limited validity) in a way unconnected with previous studies. As a consequence, the extensive, generalized, and well-founded knowledge of systems without walls has often been applied without sound basis to real situations, i.e., to systems with walls.

Modeling Transport Phenomena in Porous Media with Applications Malay K. Das,Partha P. Mukherjee,K.

Muralidhar,2017-11-21 This book is an ensemble of six major chapters, an introduction, and a closure on modeling transport phenomena in porous media with applications. Two of the six chapters explain the underlying theories, whereas the rest focus on new applications. Porous media transport is essentially a multi-scale process. Accordingly, the related theory described in the second and third chapters covers both continuum- and meso-scale phenomena. Examining the continuum formulation imparts rigor to the empirical porous media models, while the mesoscopic model focuses on the physical processes within the pores. Porous media models are discussed in the context of a few important engineering applications. These include biomedical problems, gas hydrate reservoirs, regenerators, and fuel cells. The discussion reveals the strengths and weaknesses of existing models as well as future research directions.

Kartläggning av matsvinnet i primärproduktionen Ulrika Franke,2013-11-06 Mat slängs i alla delar av livsmedelskedjan. Det finns statistik på hur mycket som kastas i flera led av kedjan men för primärproduktionen, alltså jordbrukarnas verksamhet, saknas tillförlitliga siffror på hur stort svinnet är. I ett projekt med representanter från Danmark, Finland, Norge och Sverige har vi försökt kartlägga svinnet i fem vanliga produktgrupper: Mjölk, griskött, morötter, lök och potatis. Resultaten visar att en stor mängd mat går förlorad redan i primärproduktionen. Svinnet av mjölk och griskött har störst konsekvenser för producenternas ekonomi,

mängden tillgänglig odlingsmark och klimatet även om svinnet i produktionen procentuellt sett är högre för morötter, lök och potatis. Konsumenternas krav kan ge upphov till svinn även i primärproduktionen särskilt för frukt och grönsaker.
