*The Case for 'Benevolent' Mobile Apps* Fareena Sultan, Glen Urban, 2015 Smartphones make up an increasing share of mobile devices, and mobile apps are among smartphones' most popular features. The all-time cumulative total of mobile app downloads stood at 37 billion at the end of 2011, and showed dramatic growth in 2012. Mobile app downloads more than doubled that year, resulting in a new cumulative total of 83 billion mobile app downloads. For companies, apps provide ample revenue opportunities. Mobile advertising has seen triple-digit percentage growth each year since PricewaterhouseCoopers began capturing this data in 2010. Yet some people have doubts about the effectiveness and viability of mobile advertising and believe that apps are a better medium. Authors Glen L. Urban and Fareena Sultan think one of the most effective uses of mobile media will be apps that are designed to build trust. They call these benevolent apps because the apps' value is not directly tied to selling products but rather to advancing consumers' interests and helping them solve problems or make decisions. One example is the Sea Tow app, offered by Sea Tow Service International, headquartered in Southold, New York, which provides emergency towing and rescue services for boaters in the United States, the Caribbean and Europe. The free app supports boaters' navigation needs by providing information about local tide tables, detailed marine weather forecasts, GPS coordinates and bearing, and speed. Urban and Sultan observe that a growing number of organizations, including well-known companies, have come forth with their own benevolent apps in which selling products takes a backseat to providing information and gaining trust. The authors present findings from two studies (one at Liberty Mutual Insurance and the other at Suruga Bank in Japan) showing that benevolent mobile apps that try to help consumers in decision making can positively impact consumers' perception of a brand, as well as their willingness to consider the brand and their preference for it.

Noussia,2022-03-14 This open access volume of the AIDA Europe Research Series on Insurance Law and Regulation brings together contributions from authors with different legal cultures. It aims to identify the legal issues that arise from the intersection of two disciplines: insurance law and corporate/company law. These legal issues are examined mainly from the perspective of European Union (EU) law. However, there are also contributions from other legal systems, enriching the perspective with which to approach these issues.

*Big Data, Health Law, and Bioethics* I. Glenn Cohen,Holly Fernandez Lynch,Effy

Vayena,Urs Gasser,2018-03-08 When data from all aspects of our lives can be relevant to our health - from our habits at the grocery store and our Google searches to our FitBit data and our medical records - can we really differentiate between big data and health big data? Will health big data be used for good, such as to improve drug safety, or ill, as in insurance discrimination? Will it disrupt health care (and the health care system) as we know it? Will it be possible to protect our health privacy? What barriers will there be to collecting and utilizing health big data? What role should law play, and what ethical concerns may arise? This timely, groundbreaking volume explores these questions and more from a variety of perspectives, examining how law promotes or discourages the use of big data in the health care sphere, and also what we can learn from other sectors.

**Special Use Vehicles** George W. Green,2007-01-09 Beyond the traditional purposes of moving people, goods, raw materials, and mail from place to place lies a world of unconventional uses of motor vehicles. Rolling grocery stores, churches, classrooms and health clinics have taken traditionally stationary services directly to those who need them. Companies have built vehicles in the shapes of their products (the Oscar Mayer Wienermobile being just one famous example) from the early years of automobiles. This lively history gives a fascinating overview of the many special purposes vehicles have served. The unconventional uses of motor vehicles stretch one's imagination. The author here divides them into eight types based on their purposes and uses. Sales vehicles support a successful sales volume; advertising vehicles retain present customers and attract new ones; education and training vehicles provide skills updates for employees; charity vehicles are used to serve various populations of the needy, suffering, and

distressed; religious vehicles promote a particular faith; functional vehicles perform an on-the-spot function normally done by a fixed-base facility; multimodal vehicles have the ability to traverse land, water, and air; and government vehicles provide a host of services to constituencies. Examples are provided for each type of vehicle and examples from other nations besides the United States are included as well.
