The Library Mobile Experience Bohyun Kim, 2013 How are libraries meeting the evolving needs of mobile users? According to comScore, the smartphone is in the “late majority stage of technology adoption curve.” And people don’t turn to their devices only for quick facts when on the move: 93 percent of mobile users access the Internet from home on their devices; what’s more, Pew reports that 63 percent of Americans age 16 and over would use app-based access to library materials and programs if they were available. This book provides detailed plans and instructions with specific literacy goals for child, teen, and adult audiences—exactly what librarians seeking to integrate iPad and other tablet use into their programs need. The book serves as a unique resource that helps librarians address digital literacy and bridge the digital divide by focusing on—and catering to—the needs of many age groups. Author Joel A. Nichols also provides annotated lists of apps that present librarians new to tablet computing simple and effective ways of integrating an iPad into their programs.

Computer Applications to Library Kole Lambert, A library computer system is the software used to catalog, track circulation (where appropriate), and inventory a library's assets. It is intended for home, church, private enterprise, and other small- to medium-sized collections. Larger libraries typically use an integrated library system to manage the more-complex activities, such as acquisitions, interlibrary loan, and licensing online resources. With distributed software the customer can choose to self-install or to have the system installed by the vendor on their own hardware. The

customer can be responsible for the operation and maintenance of the application and the data, or the customer can choose to be supported by the vendor with an annual maintenance contract. Some vendors charge for upgrades to the software. Customers, who subscribe to a web (hosted) service, upload data to the vendors remote server through the Internet and may pay a periodic fee to access their data. Modern libraries are constituted within and by a tradition of techniques and practices that represent a hundred years of codified professional knowledge. This book provides a historical overview of this tradition that created a complex environment of expectation and misunderstanding for introducing library automation. This book attempts to delineate and discuss the applications of the computer that have been behind the technological revolution of library science. The aim of the book is to mainly enhance the readers' understanding of the ways in which computers have heralded the invasion of technology into library science, with special attention to the emergence of digital libraries which promise to make libraries and their information completely at the mercy of our fingertips.
