*Living To 100* Thomas T. Perls, Margery Hutter Silver, With \*, John F. Lauerman, 1999-05-02 Centenarians, once a rarity, are the world's fastest growing age group: there are currently about 50,000 people over 100 in the United States alone, almost three times as many as there were in 1980. Centenarians are setting the gold standard for healthy aging. What can we learn from these pioneers? How can people decades younger apply the centenarians' longevity lessons to their own lives? These are the questions Harvard scientists Thomas Perls and Margery Hutter Silver set out to answer when they launched the New England Centenarian Study. As they probed beyond disease to identify the parameters of an energetic later life, Perls and Silver realized that the key to preserving health and vitality lies not in learning how people stay young, but in understanding how they age well. By identifying lifestyle patterns, vitamins, and medications that contribute to aging well—and may even help slow down the aging process—they show how all of us can maximize the healthy portion of the life-span. Filled with personal profiles, informational sidebars, and quizzes, *Living to 100* offers inspiration and solid scientific information to the more than seventy-five million people alive today who can look forward to their ninth and tenth decades.

**The Longevity Quotient** Edward L. Schneider, M.D., Elizabeth Miles, 2004-07-14 In this paperback edition of his widely praised book, Edward Schneider, M.D., one of the nation's leading experts on aging well, refutes the myth that age equals loss of our health and physical and mental vigor. Perhaps we can't live forever, but we can control the aging process to significantly reduce our risk of disability and to feel vital and productive throughout our lifetimes. Drawing on the latest and best aging research, Dr. Schneider has developed an innovative measure called the Longevity Quotient to assess our potential healthspan—the healthy and active part of our lifespan—based on six core components: nutrition, exercise, weight, sleep, social engagement, and hormones. We can raise our individual LQ's in any of these areas by adopting the surprisingly easy, scientifically proven strategies that Dr. Schneider recommends. By living well, we can age well—and age less.

The Life Expectancy of Older Couples And Surviving Spouses Janice Compton, Robert A. Pollak, 2018 Comparisons of individual life expectancies over time and across demographic groups provide information for individuals making retirement decisions and for policy makers. For couples, analogous measures are the expected years both spouses will be alive (joint life expectancy) and the expected years the surviving spouse will be a widow or widower (survivor life expectancy). Using individual life expectancies to calculate summary measures for couples is intuitively appealing but yields misleading results because the mortality distribution of husbands and wives overlap substantially. To illustrate, consider a wife aged 60 whose husband is 62. In 2010, her life expectancy was 24.4 years and his 20.2 years. The

intuitions that the spouses will die at about the same time (e.g., within 5 years of each other) and that she will not live for a long time after his death are incorrect. The probability that the wife will outlive her husband is 0.63 and, if she does, her survivor life expectancy is 12.5 years. Using 2010 data, we investigate differences in joint and survivor life expectancy by race and ethnicity and by education. We then calculate trends and patterns in joint and survivor life expectancy in each census year from 1930 to 2010.

Men's Reproductive and Sexual Health Throughout the Lifespan Douglas T. Carrell, Alexander W. Pastuszak, James M. Hotaling, 2023-11-16 Approximately one in twenty men have sperm counts low enough to impair fertility but little progress has been made in answering fundamental questions in andrology or in developing new diagnostic tools or management strategies in infertile men. Many of these problems increase with age, leading to a growing population of men seeking help. To address this, there is a strong movement towards integrating male reproductive and sexual healthcare involving clinicians such as andrologists, urologists, endocrinologists and counselors. This book will emphasize this integrated approach to male reproductive and sexual health throughout the lifespan. Practical advice on how to perform both clinical and laboratory evaluations of infertile men is given, as well as a variety of methods for medically and surgically managing common issues. This text ties together the three major pillars of clinical andrology: clinical care, the andrology laboratory, and translational research.

*The Facts of Death* Tony McCarthy, 2006

**Health Expectancy** Jean-Marie Robine, 1992 The International Network for Research in the Interpretation of Healthy life Expectancy Data held its first meeting in Quebec in September 1989. This book gathers together and confronts the various studies devoted to disability-free expectancy carried out since 1988 and summarized the earlier studies presented and discussed at the Quebec meeting. Divided into three parts it deals with: the initial studies (1964-1976); the empirical approach of the early 80s (1979-1983); and the beginning of the scientific approach (1983-1987) which is expended by current research.

**Human Longevity: the Major Determining Factors** Joseph A. Knight M.D., 2010-12-09 Two thousand years ago, the average life expectancy from birth to death of a Roman citizen, an individual better off than most people at that time, was about 22 years (wars, infectious diseases, trauma, etc.). This progressively increased to about 47 years in the U.S. and most European countries by 1900. Today, the average life expectancy in the U.S. is 78 years (women about five years more than men). However, unless the obesity pandemic is reversed and lifestyles improved, the average life expectancy will likely decrease significantly. conversely, if our lifestyles improve, the average life expectancy could reach 85 or more years. Growing older does not necessarily mean growing sicker. Thus, don't just add years to your life, add life to your years (Hans Selve). Indeed, of the 15 major causes of death in the U.S., 65-70% are lifestyle-related. In this book, the following documented topics that are associated with diseases and mortality are discussed in detail: theories of aging; diseases and mortality associated with obesity, physical inactivity and poor nutrition; psychological stress (anxiety, depression); addiction (alcohol, tobacco, drugs); violence (suicide, homicide); food-borne and infectious diseases (viral, bacterial, parasitic); and various other conditions (air pollution, asbestosis, trace metals).
