Gravitational Lenses Peter Schneider, Jürgen Ehlers, Emilio E. Falco, 2012-12-06 The theory, observations, and applications of gravitational lensing constitute one of the most rapidly growing branches of extragalactic astrophysics. The deflection of light from very distant sources by intervening masses provides a unique possibility for the investigation of both background sources and lens mass distributions. Gravitational lensing manifests itself most distinctly through multiply imaged QSOs and the formation of highly elongated images of distant galaxies ('arcs') and spectacular ring-like images of extra galactic radio sources. But the effects of gravitational light deflection are not limited to these prominent image configurations; more subtle, since not directly observable, consequences of lensing are the, possibly strong, magnification of sources, which may permit observation of intrinsically fainter, or more distant, sources than would be visible without these natural telescopes. Such light deflection can also affect the source counts of QSOs and of other compact extragalactic sources, and can lead to flux variability of sources owing to propagation effects. Trying to summarize the theory and observational status of gravitational lensing in a monograph turned out to be a bigger problem than any of the authors anticipated when we started this project at the end of 1987, encouraged by Martin Harwit, who originally approached us. The development in the field has been very rapid during the last four years, both through the theory and through observation, and many sections have been rewritten several times, as the previous versions became out of date.

Lens, Light, and Landscape Brian Bower, 1993 Guiding the landscape photographer into the best situation with the right equipment, and advising on how to get the best shot, this book offers a balance of inspiration and technical information. It covers different areas of landscape, both natural and urban, with chapters on types of camera and equipment, films and exposure, lighting and weather conditions, viewpoint, perspective and composition.

A Short Bright Flash: Augustin Fresnel and the Birth of the Modern Lighthouse Theresa Levitt, 2013-06-03 Describes the life of the man who invented a new lighthouse lens, capable of shining brighter, farther and more efficiently than existing light sources, and his fight against the scientific elite, his poor health and the limits of his era's technology. 13,000 first printing.

Shadow Play Bernie Zubrowski, 1995 Demonstrates how to build a shadow box in order to make a variety of shadows and explains how the study of shadows led to the invention of the camera

The Anthropological Lens James L. Peacock, 2001-12-13 A revised version covers new topics and reflects recent changes in perspective and language.

The Photographer's Guide to Using Light Ted Schwarz, Brian Stoppee, Thom O'Connor, 1986 Bridging the gap between theory and application, this book provides a practical course on one of photography's most important subjects. Specifically designed to help photographers understand the basic principles of lighting, this book also teaches how to apply this knowledge to the reality of everyday situations.

Field Guide to Lens Design Julie L. Bentley, Craig Olson, 2012 The process of designing lenses is both an art and a science. While advances in the field over the past two centuries have done much to transform it from the former category to the latter, much of the lens design process remains

encapsulated in the experience and knowledge of industry veterans. This SPIE Field Guide provides a working reference for practicing physicists, engineers, and scientists for deciphering the nuances of basic lens design.

Comparison of Behind-the-lens Meter Readings and Incident Light Meter Readings in Producing 35mm Color Slides for Technical Training Classes Edgar A. Smith,1967 The study reported here relates to the possibility that behind-the-lens meters in 35mm cameras might facilitate the taking of colored slides by simplifying the technique for determining exposure. A series of test slides, representing various types of slides used in technical training classes, briefings, and presentations was made and evaluated. These pictures included indoor shots of charts, graphs, newspaper clippings, colored posters, and live subjects. The data indicate that exposure estimates obtained from behind-the-lens meters vary significantly from those obtained from incident light meters. In approximately one-half of the 48 cases compared, the difference was at least one f-stop. The difference was not systematic but varied in both degree and direction. When viewing the slides in pairs, both a group of 37 university students and a group of 17 adult members of a photography club exhibited a strong tendency to find the slide based on the incident light meter to be more acceptable than the slide based on the behind-the-lens meter. Seeing the Light David S. Falk,Dieter R. Brill,David G. Stork,1986 The most complete and lucid nonmathematical study of light available. Chapters are self-contained, making the book flexible and easy to read. Coverage includes such non-traditional topics as processes of vision and the eye, atmospherical optical phenomena, color perception and illusions, color in nature and in art, Kirilian photography, and holography. Includes experiments that can be carried out with simple equipment. Chapters contain optional advanced sections, and appendixes review the mathematics for quantitative aspects. Illustrated, including a four-color insert.

Microlenses Hongrui Jiang,Xuefeng Zeng,2013-04-16 Due to the development of microscale fabrication methods, microlenses are being used more and more in many unique applications, such as artificial implementations of compound eyes, optical communications, and labs-on-chips. Liquid microlenses, in particular, represent an important and growing research area yet there are no books devoted to this topic that summarize the research to date. Rectifying this deficiency, *Microlenses: Properties, Fabrication and Liquid Lenses* examines the recent progress in the emerging field of liquid-based microlenses. After describing how certain problems in optics can be solved by liquid microlenses, the book introduces the physics and fabrication methods involved in microlenses. It also details the facility and equipment requirements for general fabrication methods. The authors then present examples of various microlenses with non-tunable and tunable focal lengths based on different mechanisms, including: Non-tunable microlenses: Ge/SiO2 core/shell nanolenses, glass lenses made by isotropic etching, self-assembled lenses and lens arrays, lenses fabricated by direct photo-induced polymerization, lenses formed by thermally reflowing photoresist, lenses formed from inkjet printing, arrays fabricated through molding processes, and injection-molded plastic lenses Electrically tuned microlenses: liquid crystal-based lenses and liquid lenses driven by electrostatic forces, dielectrophoretic forces, electrowetting, and electrochemical reactions Mechanically tunable microlenses: thin-membrane lenses with varying apertures, pressures, and surface shapes; swellable hydrogel lenses; liquid-liquid interface lenses actuated by environmentally stimuli-responsive hydrogels; and oscillating lens arrays driven by sound waves Horizontal microlenses: two-dimensional polymer lenses, tunable and movable liquid droplets as lenses, hydrodynamically tuned cylindrical lenses, liquid core and liquid cladding lenses, air-liquid interface lenses, and tunable liquid gradient refractive index lenses The book concludes by summarizing the importance of microlenses, shedding light on future microlens work, and exploring related challenges, such as the packaging of systems, effects of gravity, evaporation of liquids, aberrations, and integration with other optical components.

Light, Color & Lenses Pam Robson,1993 Suggests projects for exploring the properties of light and how it can be refracted, reflected, and diffracted.

Light and Optics Abdul Al-Azzawi,2018-10-03 Since the invention of the laser, our fascination with the photon has led to one of the most dynamic and rapidly growing fields of technology. As the reality of all-optical systems quickly comes into focus, it is more important than ever to have a thorough understanding of light and the optical components used to control it. Comprising chapters drawn from the author's highly anticipated book *Photonics: Principles and Practices*, *Light and Optics: Principles and Practices* offers a detailed and focused treatment for anyone in need of authoritative information on this critical area underlying photonics. Using a consistent approach, the author leads you step-by-step through each topic. Each skillfully crafted chapter first explores the theoretical concepts of each topic, and then demonstrates how these principles apply to real-world applications by guiding you through experimental cases illuminated with numerous illustrations. The book works systematically through light, light and shadow, thermal radiation, light production, light intensity, light and color, the laws of light, plane mirrors, spherical mirrors, lenses, prisms, beamsplitters, light passing through optical components, optical instruments for viewing applications, polarization of light, optical materials, and laboratory safety. Containing several topics presented for the first time in book form, *Light and Optics: Principles and Practices* is simply the most modern, comprehensive, and hands-on text in the field.
